Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 tations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 22nd of March 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 15th May 1888. Mean for district.	Normal mean.	Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 26th March* 1889

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 22ND MARCH 1889.

THE previous week ended with pressure and temperature everywhere in excess, the pressure excess amounting to nearly a tenth of an inch, and strong south-westerly winds were blowing at the head of the Bay. Pressure has fallen throughout almost the whole week—at first slowly, but afterwards more rapidly. In the early part of the week the shallow low-pressure area over Central India extended into the western districts of Bengal, but affected the weather only to the extent of giving the wind directions a cyclonic appearance and causing unsettled weather in North Bengal. During these days storms were frequent in the extreme north of Bengal, but were almost entirely absent from the other districts. Considerable quantities of rain fell at a few stations in the neighbourhood of the hills, the fall amounting in some cases to more than an inch and-a-half. In Julpigoree, Cooch Behar, and the Darjeeling Hill districts, these storms continued from the beginning of the week till Tuesday, the 19th, and a few light showers fell on Wednesday. Light cloud was general over the province on Sunday, but, with the exception of irregular changes of pressure, conditions did not become generally disturbed till Tuesday. Pressure began to fall more rapidly, and a depression formed to the north-west of the province; the south-west current was deflected more towards the west, and local storms, ceasing in North Bengal, began in other districts, more especially in a belt running along the west and south of the province. On Wednesday a brisk fall occurred, and the depression became more distinct. Temperature was high everywhere, and the changes very irregular, generally giving slight increase except at places where storms occurred. On the evening of Wednesday, the 20th, storms began in Chutia Nagpur. During the twenty-four hours following, storms were reported from stations along the western portion of South-West Bengal, South Bengal, and Chittagong. A fairly severe storm occurred about 7-30 P.M. on Wednesday at Hazaribagh, and at 10-30 P.M of the same day a storm was reported at Raneegunge. A storm passed to the west of Calcutta on the following morning at 8 o'clock, and passed over Saugor Island between ten and eleven, when a strong westerly gale of wind was reported. It is possible that this was a single storm moving in a south-easterly direction, in which case its rate of movement would be about sixteen miles an hour. Noakholly and Chittagong reported storms also on the 28th instant Very little rain fell during the passage of these storms, the amount being largest at Noakhally, where 1·5 inches fell. On Friday, in consequence of the filling up of the depression, conditions became more settled.

Pressure.—There has been a steady fall of pressure going on through the whole week—slow at first, but getting rapid towards the end of the week—and resulting in a distinct depression over Bengal on Wednesday and Thursday. On Sunday, the 17th, the lowest pressure was in South-West Bengal, the low-pressure area then over Central India extending over part of the province. The fall becoming most rapid in the north, a small depression formed in North Behar on Tuesday. The low-pressure area was transferred to North Bengal on Wednesday and Thursday, when the most rapid falls of the week took place, amounting in some cases to about a tenth of an inch. The depression was filling up on Friday. At the beginning of the week the mean for the whole province was considerably in excess, about ·06 inch. In consequence of the continued fall the pressure was nearly normal by the middle of the week, and then the defect from the daily mean increased till the end of the week. At the different stations the variation from the mean for the week shows considerable irregularity, but is generally in excess, the largest being in East Bengal and Orissa. In Behar and North Bengal pressure was very nearly normal.

Temperature.—Temperature has generally been increasing, but the changes have been very irregular at the different stations. The increase has been greatest in the northern districts, and the mean temperature for the week for Behar and North Bengal shows a large excess. In North Behar the excess is 4·4°, in South Behar 4·7°, and in North Bengal very nearly 4°; in South-West Bengal and Chutia Nagpur about 3°. In consequence of the passage of storms, the temperature has frequently fallen considerably over small areas. There were several cases of a fall of 7° in South-West Bengal on Friday. The changes were small in the early part of the week, and have been very irregular throughout.

The variations of the average temperature during the week from the normal can be seen from the following table, where the average maximum, minimum, and mean temperatures at

nine typical stations in different districts of the province are given compared with the normal means for the same period :—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 22nd *March* 1889.

	Normal mean maximum temperature for the week ending 22nd March.	Actual mean maximum temperature for the week ending 22nd March.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 22nd March.	Actual mean minimum temperature for the week ending 22nd March.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 22nd March.	Actual mean daily temperature for the week ending 22nd March.	Variation of actual mean from the normal.

Rainfall.—Rain for the week has been everywhere in defect. Though a few places have received considerable quantities, the average fall has not been large. In the first part of the week local storms with rain were common in North Bengal, and during the latter part thunderstorms were fairly general over the whole province, except Behar. The average fall for East Bengal has been ·25 inch, for Orissa, North Bengal, and Chutia Nagpur between one and two-tenths of an inch; that of South-West Bengal only ·03 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 22nd of March 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, t thunder, d drizzling rain, < lightning, dew.

METEOROLOGICAL OFFICE, INDIA;
The 25th March 1889.

C. LITTLE,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

For the week ending 9th March 1889, the returns of the principal Municipalities in Bengal disclose the following results:—

1. During the week in question births and deaths were registered in the proportions, respectively, of 24· and 21·8 per 1,000 of population as opposed to 22·6 and 22·7 per 1,000, respectively, during the preceding week ending 2nd March, indicating an improvement in the registration of births with a retrogression in that of deaths.

2. The highest proportions of births and deaths were returned from the following Municipalities:—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Naraingunj	68 0	Serampore	35·3
Comillah	57 8	Purneah	34 6
Serampore	51 0	Burdwan	33·6
Rampore Beauleah	49·9	Suburbs of Calcutta	33 5
Puri	48 3	Puri	31·5
Durbhanga	44·1		
Santipore	36 8		
Bhagulpore	29 9		
Chupra	29·3		

3. The mortality from the diseases (specified below) exhibits no noticeable difference in comparison with the death-rates from the same diseases in the preceding week:—

	Ratio per *mille* during the weeks ending — 9th March 1889.	2nd March 1889.
Cholera	3·7	4 2
Small-pox	4	·1
Fever	8 3	9 1
Bowel-complaints	2 4	3 0
Injury	·5	·5
Other causes	6·5	5·8

4. The highest rates of deaths from cholera and the diseases coming under the head of "Other causes" were returned from the following Municipalities:—

Cholera.	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Naraingunj	12·4	Serampore	15 7
Santipore	12 3	Puri	14 7
Burdwan	10 7	Chupra	11 7
Howrah	9 7	Gya	10 9
Suburbs of Calcutta	9 3	Bhagulpore	10 0
Hughli	6·7		
Gya	2 7		

The other maladies, excepting fever, did not prove conspicuously fatal anywhere. Fever, however, appears to have prevailed with noticeable fatality only in Purneah town, where the death-rate was 27·7 per 1,000 of population.

5. With reference to *Sex*, *Class* and *Age*, the mortality of the week stood as follows:—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	24·2	Christians	26·1	Under 1 year ...	166 3
Females	19·1	Hindus	20·9	1 and under 5 years ..	26 5
Ratio of male deaths to every 100 female deaths	143	Mahomedans ...	24·1	5 „ 10 „ ...	12 3
				10 „ 15 „ ...	6 8
				15 „ 20 „ ...	14 1
				20 „ 30 „ ...	13 8
				30 „ 40 „ ...	18·4
				40 „ 50 „ ..	17 5
				50 „ 60 „ ...	24 6
				60 years and upwards .	49 7

W. H. Gregg, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 25th March 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

INCREASE. — Tons.

Jute—
(1) Raw .. . . — 22
This increase is due to export by rail owing to the river communication between Jeaganj and Calcutta being stopped for insufficient water.

Provisions—
(3) Others ... ... — 41
The increase under this head is due to import of potatoes owing to high rate at Azimganj.

Railway plant and rolling-stock . ... — 73
The increase is due to more materials carried during the month.

DECREASE.

Coal . . .. — 76
This decrease is due to previous stock not being exhausted.

Cotton, raw . . .. — 11
This decrease is due to less import owing to dull market.

Gunny bags and cloths . .. . .. — 13
This decrease is due to less export of grains from intermediate stations.

Grains—
(2) Rice . . .. — 309
The decrease under this head is due to less export from intermediate stations.

(5) Others ... . — 87
This decrease is due to less import of gujia seed on account of high rate.

Oilseeds—
(1) Linseed ... ... — 37
This decrease is due to less export owing to high rate.

The 23rd March 1889.

R. G. MOOKERJEE, *Manager, Nalhati State Railway.*

PUBLIC WORKS DEPARTMENT.

Irrigation.

THE following notes on crop experiments made upon lands irrigated from the Sone Canals are published for general information.

By order of the Lieutenant-Governor of Bengal,

C. W. I. HARRISON, *Lt.-Colonel*, R.E.,
Offg. Joint-Secy. to the Govt. of Bengal, P. W. Dept.

No. 514, dated Arrah, the 7th February 1889.

From—C. W. ODLING, ESQ., Superintending Engineer, Sone Circle,
To—The Chief Engineer, Bengal, Irrigation Branch.

I HAVE the honor to submit, for your information, the papers marginally noted, containing the result of the crop experiments carried out in the Sone Circle during the kharif season 1888-89. Mr. Luson, C.S., on special duty, at my request, undertook the task of tabulating and commenting on the whole of the experiments. His note thereon is of so much public interest that I beg to suggest that it shall be published in the *Calcutta Gazette* for general information.

Enclosures.

Note by Mr. H Luson, C.S., dated 4th February 1889.
Appendix I—
Notes on experiments on shrinkage of dhan and straw on drying.
Appendix II—
Letter No. 4980 of the 14th December 1888, from Messrs. Burrows, Thomson and Mylne.
Letter No. 4982 of the 19th December 1888, from Messrs. Burrows, Thomson and Mylne.
Executive Engineer Eastern Sone Division's memorandum No 357 of the 19th January 1889, and enclosures.
Executive Engineer Buxar Division's letter No. 166 of the 19th January 1889, and enclosures.
Executive Engineer Arrah Division's memorandum No. 174 of the 17th January 1889, and enclosures.
Executive Engineer Arrah Division's memorandum No. 217 of the 19th January 1889, and enclosures.

2. There has been much discussion as to the yield of crops on lands irrigated by the canals, but with the exceptoin of the experiments taken yearly by canal officers, which are annually noticed in the Revenue Report, there are few facts to go on.

3. The experiments commented on in the note were taken, (I) by Mr. Luson himself, (II) by Messrs. Burrows, Thomson and Mylne, who with great public spirit undertook the duty at my request, and (III) by canal officers and subordinates. Experiments classes (I) and (II) are separately detailed in the note, whilst those under class (III) have been grouped together.

4. The accuracy of the experiments carried out by canal officers having been somewhat questioned last year before the Irrigation Committee, they were this year carried out with the utmost publicity in the presence of civil officers, zemindars and others who could be induced to attend. The names of the persons present at each experiment are noted in the reports Appendix (II), and you will on inspection see that representatives of all classes interested in agriculture were present, and that the experiments were generally largely attended.

Note by HEWLING LUSON, ESQ., C.S., *on special duty in the Public Works Department, upon crop experiments on canal-irrigated dhan taken in the Sone Circle during the kharif season of* 1888-89,—*dated Arrah, the 4th February* 1889.

THIS report incorporates, at the Superintending Engineer's request, the figures supplied by Messrs. Burrows, Thomson, and Mylne of Beehea, and by the Executive Engineers in charge of the three Divisions of the Circle, with the results of my own experiments.

2. The returns given by the Canal Sub-divisional Officers have been separated from those given by their subordinates, and in the following tables the figures obtained by (*a*) Messrs. Burrows, Thomson and Mylne, (*b*) the Canal Sub-divisional Officers, (*c*) the Canal subordinates, and (*d*) by myself, are compared side by side.

3. All the weighments made by Messrs. Burrows, Thomson, and Mylne and myself were made after the grain and straw had been thoroughly dried In my experiments the crop, directly it was cut, was sewn up in stout cloth and sent to head-quarters; it was not weighed till after exposure to the sun for 15 days on the average. With the exception of 15 experiments made by Mr. Maconchy, Executive Engineer, and Messrs. White and Clowes, Assistant Engineers, all the figures supplied by the Canal Officers represent weighments of crops made at once upon the fields, as was directed in paragraph 1 of the Superintending Engineer's instructions of the 25th October last. Though weighing on the field was evidently meant to secure publicity, yet it seems to me that accuracy has to some extent been sacrificed. Rice is always cut before it is quite ripe, and is then laid upon the ground to dry for several days, after which it is tied up in bundles and taken to the threshing-floors. There is a saying current in these districts, दुधी धान बुढ़ रबी (*dudhi dhan buddha rabi*), *i.e.* "you must cut rice when the grains are still milky, but *rabi* crops you may gather when they are old" and I have noticed that, if rice is allowed to get quite ripe before cutting, the corn drops out very easily. In order, therefore, to secure all the grain, experiments should be made on crops which are damp.

4. Seventeen experiments were made by Messrs Maconchy and White, a subordinate, and myself, upon the shrinkage of *dhan* in drying. The average of these experiments gives about 8·33 per cent. Twenty-one experiments were made by me upon the shrinkage of straw, and they averaged nearly 33·33 per cent Tables showing the calculations of these averages will be found in Appendix No 1.

5. The co-efficient of shrinkage is not constant; it depends upon the kind of rice and when it was last watered. Some crops are irrigated till within a few days of cutting for the sake of the second crop sown with the *dhan* It would also make a material difference whether the experiment was made in the morning or afternoon, as the dew at night is heavy. The variations in the weight of the straw from shrinkage are obviously liable to be greater than those of the grain. In order, however, to compare the various results, I have reduced the figures of all the wet weighments according to the co-efficients given in the last paragraph. The actual figures sent in will be found in Appendix No. 2.

6. *Transplanted aghani dhan irrigated throughout the season with canal water.*—The following table represents the results of 222 experiments upon first-class crops only. None of the figures are supposed to represent average crops; they are intended to show the maximum obtainable under canal irrigation.

The results are given in maunds and seers per acre. *Dhan* means unhusked rice.

All figures marked* represent not actual weighments, but weighments reduced by the co-efficients given in paragraph 4.

The results obtained from the different sources are nearly identical. The figures of Messrs. Burrows, Thomson and Mylne are slightly lower than the rest because a certain amount of wastage occurred from the method they adopted of drying the crop. They had it tied up in bundles and carried to head-quarters, so that some grain must have fallen out on the way. The wastage, however, would not be much greater than occurs usually when the cultivators carry the bundles from the fields. In my experiments there was absolutely no wastage, because as soon as it was cut the crop was sewn up in bags which were afterwards opened only in my presence. Similarly in weighing wet crops upon the ground the Canal Officers would not make any waste.

The figures of the Sub-divisional Officers are higher than the rest evidently because, taking a very small number of experiments each, they were mostly able to choose the very best crops. My own experiments were made at different places throughout the whole circle in the three districts, Shahabad, Gya, and Patna; and as all the *aghani* rice in the country is cut within a few days I had little time to choose specially fine crops.

The general average of the subordinates is somewhat lower than it should have been because in the Buxar and Eastern Sone Divisions sufficient care was not taken to experiment upon first class crops only. The Sub-divisional Officer of Sikraol remarks that in some case the best crops were allowed to be cut before the experiments were started, and in others the Sub-Overseers cut the rice nearest their bungalows to save the trouble of going a little distance for better. Similarly the returns of the Daodnagar sub-division have been reduced because in several cases the experiments were put off till the 25th of December, 12 days after I had seen that most of the crop had been cut. The subordinates of the Arrah Division have been better supervised and their figures are good, but it seems to me that in future no officer below the rank of a Sub-divisional Officer should take crop experiments. Six experiments carefully made by each Sub-divisional Officer would be of more value than any number made by subordinates who do not appreciate the value of scientific accuracy.

The variations in individual experiments (my best being 44 maunds 8 seers of *dhan* an acre and my worst 20 maunds 32 seers) are due to the differences of kinds of rice and kinds of soil, and I think also in some cases to want of experience in picking out the crop likely to give the largest outturn.

The crops in all these experiments are stated to have been regularly irrigated with canal water. Accordingly, as the rains failed after 9th September, they owe their existence entirely to the canals.

7. *Kartika dhan.*—The following table shows the results per acre of the 31 experiments made upon *Kartika* or early rice regularly irrigated by canal water. Figures marked * have been reduced on account of the crops having been weighed damp—

PERSON TAKING EXPERIMENT.	DHAN.			STRAW.

Subordinate, Agiaon sub-division	1	14	$19\frac{1}{3}$ *	1	33	6 *
Total ...	31	27	$21\frac{8}{9}$	31	46	$19\frac{1}{4}$

† One experiment wet, the other dry.

Kartika rice is not grown to any very large extent in the irrigated area, small patches being sown usually in each village for the early production of straw and *dhan*; hence apparently only three experiments were taken by representatives of the Canal Department.

The experiment of the subordinate of the Agiaon sub-division probably does not represent the best crop of the neighbourhood, but the most convenient to cut.

8. *Broadcast dhan.*—Eight experiments were made upon rice sown broadcast and irrigated regularly from the canals. *Kartika* and *aghani* are not separated in the following table. Figures marked* have been reduced on account of the crops having been weighed wet:—

PERSON TAKING EXPERIMENT.	DHAN.			STRAW.

Total ...	8	30	$32\frac{7}{8}$	6	38	$30\frac{26}{41}$

Dhan is very seldom sown broadcast in areas in lease for canal water. Under the *ahra* system of irrigation considerable quantities of broadcast are sown inside the ahras on the *tal*, but the higher form of cultivation prevails under the canal system, as a regular supply of water can be depended upon, and I found a difficulty in obtaining good fields for experiment. Broadcast rice is very coarse and less valuable than the kinds transplanted. It loses more considerably in weight on drying.

9. *Aghani dhan irrigated after 15th October.*—As requested, specimens of the best rice that did not receive canal water till after 15th October, and had not before been irrigated from an *ahra*, are given. These experiments were made, some on transplanted and some on broadcast *dhan*—

* Weighed wet; figures reduced by co-efficients given in paragraph 4.

I am inclined to doubt the accuracy of some of the results given by the Monoharpur subordinates; it is not improbable that crops which had been previously irrigated from an *ahra*, which afterwards dried up, have been taken. From what I saw of the *aghani dhan* that depended upon rain alone, and received no water from ahra or canal till the 15th October, I think that the produce of scarcely any field exceeded 10 maunds an acre.

No rain fell after 9th September till the time of harvest, so that the above figures (though not so trustworthy as they might be) tend to show this result—that the best crops, not artificially watered last season, were reduced by five weeks' want of water to less than one-third of what they would have been if irrigated throughout.

10. *Dhan irrigated from ahras only.*—One experiment was taken by Mr. White, Assistant Engineer, Sub-divisional Officer of Daodnagar, upon rice irrigated from an *ahra*, and 18 such by subordinates. I took none, as my instructions stated that they were not required. The following is an analysis of the figures:—

PERSONS CONDUCTING EXPERIMENTS.	DHAN.		STRAW.	
	Number of experiments.	Average per acre.	Number of experiments	Average per acre.
		Mds. s.		Mds. s.
C. A White, Esq., Assistant Engineer ...	1	30 8	......	......
Subordinates—

Sikraol ditto	3	4 0$\frac{13}{16}$*	3	6 4*
	18	12 6$\frac{5}{16}$	18	26 18$\frac{25}{27}$

* Weighed wet and reduced by co-efficients given in paragraph 4.

The figures of the subordinates are of little value, as, although they may represent the best *ahra*-irrigated rice that could be conveniently found by them, except in the case of large *ahras* almost all the rice not watered by the canals was very insufficiently irrigated or died. These figures do not represent the results that can be produced by a plentiful supply of *ahra* water. I saw rice irrigated from *ahras* in one or two places at least as good as the best canal-irrigated rice, but in a year like the last, it is extremely difficult to make a comparison of the best crops under both systems, because in scarcely any villages near the canals was a plentiful supply of *ahra* water kept up throughout the season.

If comparisons are to be made between crops irrigated by the two kinds of water, the experiments should certainly be conducted by officers of the proper experience and qualifications. Similar kinds of rice grown on similar lands under exactly similar conditions need to be selected with very great judgment, if indeed the exact similarity of all the conditions can ever be established in any case.

11. *Soils.*—The chief soils of the area commanded by the canals are sand, clay, and loam, and mixtures of two or all three of these in various proportions. There are distinctive names for the ordinary combinations which every cultivator knows, but there are other names returned with the results of the various experiments which in different parts cover widely different proportions. Those concerning which there is doubt as to their composition I have not introduced into the following tables. The more common forms about which there can be little chance of error are the following:—

Sandy soils.

Bal	Chiefly sand.
Benga	Chiefly sand.
Balwat	Sand and loam, but more sand.
Balmat	Sand and loam, but more sand.
Balsunder ...	Sand and loam, but more sand.
Dhus	Clay and sand, sand predominating.

Clayey soils.

Kewal or Kerail ...	Chiefly clay.
Garmat	Clay and loam, but more clay.
Garwat	Clay and loam, but more clay.
Poura	Clay and sand.
Sigta	Clay and ashes.
Rekhour	Clay and ashes.

Loamy soils.

Doras or Dorsahi.

These names appear against 79 of the experiments upon regularly irrigated *aghani dhan* taken by Messrs. Burrows, Thomson and Mylne, the Sub-divisional Officers, and myself, and against 95 similar experiments reported by the canal subordinates. As in nearly all the former 79 the crops were weighed dry and are more trustworthy, I give the results separately from the latter 95 as follows:—

* All these figures have been reduced by the co-efficients given in paragraph 4 on account of the experiments having been made on wet crops.

From these tables it is clear that sandy soils are decidedly somewhat better for the cultivation of *dhan* than clayey soils: they would seem also to be better than loamy soils. These results are in accordance with the general opinion throughout these districts. They prove also that very good *dhan* can be grown upon clayey soils.

As the best crops have been selected for experiment, I have no doubt that the best lands only of each class grew them.

12. *Number of years canal water used upon the lands experimented upon.*—The remarks in this paragraph refer only to transplanted *aghani dhan*. Of the 25 experiments made by me, in 21 the fields were situated in long-leased areas. Messrs. Burrows, Thomson and Mylne do not state how long canal water had been used on the lands they experimented upon, but I know that nearly the whole of their zemindari in which canal water is taken is under long lease. Twenty-nine out of the 33 experiments by Sub-divisional Officers were made in long leased areas, and in 129 cases out of the 138 reported by the subordinates canal water had been taken on long lease.

In 23 out of my 25 cases canal water had been continuously taken for nine years or more. Of the remaining two, in one canal water had been used for three years, and in the other never before. The results of these two are slightly below the average of the 25.

The Sub-divisional Officers have noted the numbers of years of continual irrigation in 25 of their experiments. In six the lands had received canal water for 12 years, in one for 11 years, in two for 10 years, in one for 9 years, in one for 8 years, in five for 7 years, in six for 6 years, in one for 5 years, in two for 4 years, and in nine for less.

The subordinates have noted the periods of regular irrigation in 120 cases as follows:—Two for 14 years, fourteen for 12 years, three for 11 years, seventeen for 10 years, twenty-seven for 9 years, twelve for 8 years, thirteen for 7 years, seven for 6 years, thirteen for 5 years, three for 4 years, seven for 3 years, and two never before irrigated.

In fact the experiments upon transplanted *aghani dhan* have been taken generally upon lands continuously irrigated by canal water for a number of years, and it is therefore impossible from the returns to compare the results of the continued use of canal water with those for lands to which it has not before been applied.

13. *Various kinds of dhan.*—Innumerable varieties of dhan are grown in South Behar. A common saying runs रजपूत-ओ-धान-के-ओर-नाहिं-है (Rajput o dhan ke or nahin hai), "there is no limit to the classes of Rajputs or the kinds of *dhan*." Of the 197 experiments upon

canal irrigated transplanted *aghani dhan* before me, against which the names are recorded the following is an analysis :—

Name of rice (aghani).	Number of experiments.	Name of rice (aghani).	Number of experiments.
Branti	33	Selha	3
Dalangi	31	Srikhal	3
Basmati	22	Baitarna	2
Bataspheni	14	Kanakjira	2
Silhat	11	Kapsar	2
Laldohia	10	Dudh Karai	2
Sukhdas	9	Basanti	2
Maharajwa	6	Maghi	2
Gajmukta	5	Ramkara	2
Jarhan	5	Dolar	1
Mansinghia	5	Khajra	1
Nayan Das	5	Talbar	1
Batasa	4	Batasa	1
Shamjira	4	Rajmahli	1
Nadaura	3	Garura	1
Ramsal	3	Bansphal	1

14. *Rents.*—The rents of the fields experimented upon have been usually recorded except by Messrs. Burrows, Thomson and Mylne, who were not requested to do so.

The following figures represent the *nagdi* rates of rent per acre paid for the lands on which regularly irrigated *aghani dhan* was grown.

Of the 25 experiments made by myself upon this crop, in 20 nagdi rents were paid, and their average is Rs. 3-10$\frac{1}{3}$ a bigha, or Rs. 5-13$\frac{3}{5}$ an acre. The table below shows the rents in these 20 cases compared with the outturn. The figures represent the rent, exclusive of road cess, public work cess, *neg*, &c.—

Order in rent.	Rent per acre.		Outturn per acre.				Order in outturn of dhan.
			Dhan.		Straw.		
	Rs.	A.	Mds.	S.	Mds.	S.	
1	12	0*	33	24	37	24	13
2	8	0	41	16	51	8	2
3	8	0	34	0	48	32	11
4	8	0	29	4	55	8	16
5	7	8*	34	24	67	8	9
6	7	8	20	32	65	32	20
7	6	6$\frac{2}{5}$*	33	0	52	32	14
8	6	3$\frac{1}{5}$*	28	24	30	16	18
9	5	9$\frac{3}{5}$	29	0	28	4	17
10	5	7$\frac{1}{5}$	39	16	56	0	3
11	5	4*	37	12	43	8	5
12	5	4	35	36	53	32	7
13	4	12$\frac{4}{5}$*	34	8	62	16	10
14	4	8*	36	16	46	8	6
15	4	0	43	24	46	16	1
16	4	0*	39	0	43	16	4
17	4	0	27	0	38	8	19
18	3	12*	31	24	44	32	15
19	3	9$\frac{3}{5}$*	34	0	46	8	11
20	3	3$\frac{1}{5}$	35	24	36	32	8

The mark* means that *khesari* or some second crop was sown with the *dhan.*

It will be noticed that the rent does not correspond with the outturn. Indeed, throughout the whole circle rents do not vary exactly with the fertility of the soil or the outturn. As a rule Guzashtadars and Brahmin and Rajput ryots pay less than the lower classes. Some landlords are less grasping or know their interests less than others.

The Sub-divisional Officers recorded figures for rent in 31 cases ; but, except Mr. White, none state whether cesses are included. As sometimes the rent paid is inclusive of these and sometimes exclusive, the returns are not quite so accurate as mine. Nevertheless, the average is almost the same—Rs. 3-11$\frac{23}{31}$ a bigha, or Rs. 5-15$\frac{91}{155}$ an acre.

The subordinates recorded rents in 96 experiments. They too omit to note whether cesses are included ; thus—

	Number of experiments.	Average rent per acre.
		Rs. A
Buxar Division.		
Basawan sub-division	13	7 10$\frac{38}{65}$
Monoharpur ditto	22	5 3$\frac{21}{55}$
Sikraol ditto	Nil	......
Eastern Sone Division.		
Daodnagar sub-division	30	6 5$\frac{1}{2}\frac{9}{5}$
Bikram ditto	Nil	......
Arrah Division.		
Agiaon sub-division	6	6 0$\frac{8}{15}$
Nasriganj ditto	6	5 1$\frac{3}{5}$
Koath ditto	13	4 12$\frac{14}{65}$
Ramnagar ditto	6	4 9$\frac{1}{5}$
Total ..	96	5 10$\frac{7}{60}$

The total average, Rs. 5-10$\frac{7}{60}$ an acre, or Rs. 3-8$\frac{31}{60}$ a *bigha*, is almost the same as the results obtained by the Sub-divisonal Officers and myself.

15. In conclusion, I beg to observe that all the calculations have been made and verified by myself. As some of the returns were by *bighas* and some by acres, and as almost all the figures of the Canal Officers and subordinates had to be reduced on account of the crops not having been dried, this has been a work of some considerable labour. I deemed the subject too important to trust it to clerks.

HEWLING LUSON.

ARRAH,
The 4th February 1889.

APPENDIX No. 1.

The following figures are given showing the calculation of the co-efficients of shrinkage adopted in paragraph 4.

Dhan.—17 Experiments—

	Outturn per acre.			
	Wet.		Dry.	
	Mds.	seers.	Mds.	seers.
Mr. Maconchy, Executive Engineer ...	28	24	26	11
Mr. White, Assistant Engineer ...	28	16	27	8
	40	24	39	8
	54	0	50	15
	47	30	45	24
	35	8	33	0
	32	0	30	8
Subordinates	33	2	30	39½
	35	24	33	15
	45	32	43	24
	40	16	33	32
	33	24	28	32
	11	38	10	18½
H. Luson, Esq.	40	24	36	20
	42	28	40	20
	37	16	33	4
	30	32	29	28
	618	8	572	27
	572	27		
Difference ...	45	21 = 7·33 per cent. nearly		

The average of my own four experiments is 7·72 per cent., and in each case the *dhan* was conveyed short distances before being weighed. I have accordingly added one per cent. to the general average, and taken the shrinkage at 8·33 per cent. or $\frac{1}{12}$th.

Straw.—In 21 experiments I found the total weight of wet straw and *dhan* weighed together on the field decreased almost exactly 25 per cent on being perfectly dried. On the whole of my experiments, the proportion of dry *dhan* to dry straw is about as 7 : 10, and having, as found above, the shrinkage for *dhan*, we can calculate that for straw on 21 experiments thus—

If a = wet dhan, a^1 = dry dhan, b = wet straw, and b^1 = dry straw; then $\frac{a^1}{b^1} = \frac{7}{10}$; $\frac{a^1}{a} = \frac{11}{12}$ and $\frac{a^1 + b^1}{a + b} = \frac{3}{4}$; eliminating a^1 and a, $\frac{b^1}{b} = \frac{330}{496} = \frac{2}{3}$ almost exactly. Therefore the shrinkage for straw is 33·33 per cent., or ⅓rd.

APPENDIX No. 2.

The actual figures submitted by the Executive Engineers.

No. 4980, dated Beheea, the 14th December 1888.

From—MESSRS. BURROWS, THOMSON AND MYLNE,
To—The Superintending Engineer, Arrah.

WE forward herewith the results of 52 crop experiments, which show a very satisfactory outturn of paddy from canal-irrigated lands.

Only the best crops were selected, and it should be remembered that the season was peculiarly favourable, inasmuch as there was no blight.

We can vouch for the correctness of the experiments.

No. 4982, dated Beheea, the 19th Dcember 1888.

From—MESSRS. BURROWS, THOMSON AND MYLNE,
To—The Superintending Engineer, Sone Circle.

IN reference to the enquiry contained in your No. 5059, dated 18th instant, we have to state that the grain and straw were weighed when dry.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 30th March 1889.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches	Character of the weather and state and prospects of the crops.
BENGAL.		*Western Districts.*		
Burdwan Divn.	1	Burdwan , Mar. 30, '89	Nil	Weather - seasonable. Prospects of crops good. Rain wanted. Prices of rice have gone up at Raniguuge and Burdwan, but are stationary at Culna and Cutwa.
	2	Bankoora „ 30, '89	Nil	Weather—hot Standing crops—*khosta til*, indigo and cotton—doing well. Rain wanted for ploughing. Prices continue stationary.
	3	Birbhum „ 30, '89	Nil	Weather—hot; cloudy and cooler for last two days. *Rubbi* crops (except *til*) harvested; outturn about 12 annas. Rain wanted for *til* and for ploughing
	4	Midnapur „ 30, '89	Nil	Weather—close, and heavy clouds about. *Boro* crop promising in all sub-divisions.
	5	Hugli „ 30, '89 Serampur	Nil 0 03	Weather—seasonable. *Boro* rice, sugarcane and vegetables doing well.
		Howrah „ 30, '89	Nil	Weather—cloudy, but on the whole pleasant. *Boro* crop doing well
		Central Districts.		
Presidency Divn.	6	24-Pergħs. Mar. 30, '89	0·89	Weather—hot. Sky overcast. Manufacture of sugar continues Ploughing is going on. Rain much wanted.
	7	Nuddea „ 30, '89	Nil	Weather—hot and dry Cloudy towards end of week. Harvesting of *rubbi* nearly completed, outturn generally fair. Rain would be beneficial for ploughing operations.
	8	Khoolna „ 30, '89	0·14	Weather - hot. *Boro* paddy and *til* in good condition Rain wanted for ploughing.
	9	Jessore „ 30, '89 Magura Narail	0 07 0 38 0 24	Weather—hot and cloudy Rain badly wanted for cultivation. In the low lands *dhan* is being sown. Harvesting of *rubbi* crops over.
	10	Moorshedabad „ 30, '89	Nil	Weather—bright and hot till 28th, close and cloudy from 29th. Lands are being prepared for *aus*. *Rubbi* harvesting going on.
Rajshahye Divn.	11	Dinagepur „ 30, '89	Nil	Weather—warm, westerly winds have set in Sugarcane pressing not finished yet. Lands are being ploughed for *bhadoi* paddy and jute
	12	Rajshahye „ 30, '89	Nil	Weather—hot. Strong westerly wind. Cultivation of *boro* paddy going on Rain wanted Spring crops being reaped Rice selling at 17¼ seers per rupee. A hail storm has done some damage to the *ganja* crop in the Nowgong sub-division.
	13	Rungpur „ 30, '89	Nil	Weather—cloudy and cool. The young paddy is germinating, but rain is much wanted for its development. The winter crops are nearly all gathered in, and the land is being prepared for jute.
	14	Bogra „ 30, '89	Nil	Weather—high winds during day, dry heat, occasional clouds. Land is being ploughed for *aus* and jute Crushing of sugarcane still going on *Khesari*, *til* and *kaun* thriving well. Rain badly wanted Price of rice steady.
	15	Pubna „ 30, '89	Nil	Weather—hot and at times cloudy *Cheena* and barley are being reaped. *Boro dhan* is being sown. Rain wanted.
	16	Darjeeling „ 30, '89	Nil	Weather—windy but fine. State and prospects of crops favourable.
	17	Julpigoree „ 30, '89	Nil	Weather—days hot, mornings pleasant. Latter part of week cloudy. Harvesting of *rubbi* crops going on. *Bhadoi* sowings in progress. Rain much wanted. No change in prices.
		Eastern Districts.		
Dacca Divn.	18	Dacca Mar. 30, '89 Munshigunge ...	Nil 0 05	Weather—very hot. Cultivation of jute and *amun* and *aus* paddy going on. Mustard and pulses have been gathered. Damage to the standing crops is anticipated for want of rain. Rain also much needed for early sowings of paddy.
	19	Furreedpur „ 30, '89 Madaripur ...	0 06 0 20	Weather—cloudy. Lands have been prepared for *aus* and *amun* sowings. Rain much wanted.
	20	Backergunge „ 28, '89	0·05	Weather—very hot. Prospects of crops fair. Rain wanted.
	21	Mymensingh „ 29, '89 Netrokona	Nil 0·28	Weather—hot. State and prospects of crops fair, but rain is wanted in many places.
Chittagong Divn.	22	Chittagong April 1, '89	Nil	Weather—hot. Rain much wanted. Prices steady.
	23	Noakholly Mar. 29, '89 Fenny ...	0·15 2·70	Weather—warm, southerly wind. Harvesting of pulses almost completed. Sowing of *aus* commenced.
	24	Tipperah „ 28, '89 Brahmanberiah ... Chandpur ...	Nil 0 06 0 60	Weather—windy and warm. Hot in day-time and cool at night. *Kalai* and *sesamum* are being gathered; outturn expected to be fair. Land is being prepared for paddy and jute. Rain much wanted.
	25	Chittagong Hill „ 26, '89 Tracts.	0·60	Weather—foggy in the morning and sultry from noon to midnight *Jum* cutting nearly over. Tobacco and chillies doing well. Rain on the morning of 22nd has greatly improved the condition of the above crops.
		Hill Tipperah „ 28, '89	Nil	Weather—hot and windy. Prospects of *boro* paddy and chillies not favourable. Rain much wanted.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.				
Patna Divn.				
26	Patna	Mar. 30, '89	Nil	Weather—hot. West wind prevailing. *Rubbi* crops are being harvested. Extraction of opium is nearly finished. In the Barh sub-division there has been a slight rise in the price of rice and some fall in the prices of other food-grains.
27	Gya	„ 30, '89	Nil	Weather—hot. Threshing of *rubbi* crops continues. Collection of opium practically completed.
28	Shahabad	„ 30, '89	Nil	Weather—hot with west wind. Harvesting of *rubbi* continues. Prices show a downward tendency.
29	Durbhunga	„ 30, '89	Nil	Weather—early part of week clear and bright, cloudy on 28th and 29th. Hot west winds. Harvest of *rubbi* in full swing and giving full occupation. Indigo sown and germinated well, but much attacked by caterpillars. Mango promises excellently. Prices slightly falling.
30	Mozufferpur	„ 30, '89	Nil	Weather—clouds gathering which give hope of rain shortly. Strong west winds throughout the week. *Rubbi* harvest continues with good results. *Cheena* and *mung* still doing well, but rain wanted for them in the north.
31	Sarun	„ 30, '89	Nil	Weather—hot. Sky overcast and gloomy during last two days. Wind variable, mostly from west. *Rubbi* harvest proceeding. Much damage done to the young indigo crop by caterpillars.
32	Chumparun	„ 30, '89	Nil	Weather—clear and warm, strong west wind prevailing. Extraction of opium and harvesting of *rubbi* almost finished. *Cheena* coming on well. Prices almost stationary.
Bhagulpore Divn.				
33	Monghyr	„ 30, '89	Nil	Weather—hot and seasonable, cloudy at times in the latter part of the week *Rubbi* harvest going on with an average outturn of 12 annas.
34	Bhagulpur	„ 30, '89	Nil	Weather—seasonable. *Rubbi* harvest continues. Yield of oilseeds 10 to 12 annas. *Mohwa* crop good at present. Sowings of *mung* and *dhan* in low lands continue.
35	Purneah	„ 30, '89	Nil	Weather—hot for time of year. *Rubbi* crops being cut. Sowings for *bhadoi* in progress.
36	Maldah	„ 30, '89	Nil	Weather—bright and clear; last two days cloudy. *Rubbi* harvest going on. Rain much wanted for *boro* paddy which is being watered by artificial means, and for cultivation of lands for *bhadoi* crops.
37	Sonthal Perghs.	„ 30, '89	Nil	Weather—hot with strong west winds, but latterly cloudy and still. *Mohwa* crop is turning out well. *Rubbi* crops being harvested, and prices, except of rice, falling. *Boro dhan* being transplanted.
ORISSA.				
Orissa Divn.				
38	Cuttack	„ 29, '89	Nil	Weather—hot and seasonable. *Dalua* rice is being reaped in some places. Rain much wanted for ploughing. Price of rice stationary.
39	Pooree	„ 28, '89	Nil	Weather—hot. Rain wanted for ploughing lands for ensuing rice crops. *Mung* and *kulthi* being gathered. Common rice 17 seers 12 chittacks per rupee in the Sudder sub-division and 17 seers 4 chittacks in the Khoordah sub-division.
40	Balasore	„ 29, '89	Nil	Weather—days hot, nights cool. *Dalua* rice is being harvested. Rain much wanted for cultivation.
CHOTA NAGPORE.				
South-West Frontier Agency.				
Chota Nagpore Divn.				
41	Hazaribagh	Mar. 29, '89	0·10	Weather—seasonable, though somewhat unsettled. Very cloudy to-day (29th). Harvesting of *rubbi* crops nearly over; outturn from 6 to 12 annas. Prospects of mango very indifferent. *Mohwa* doing well, and prospects so far good. Prices stationary.
42	Lohardugga Palumow	„ 30, '89 ...	Nil 0·07	Weather—unsettled at head-quarters. Three storms visited the sub-division, where rain and hail much damaged the *mohwa* crop. Prices of food-grains fluctuating and have a tendency to rise.
43	Singbhoom	„ 29, '89	Nil	Weather—cloudy and oppressive. *Rubbi* crops nearly all harvested. Outturn varies from 6 to 12 annas.
44	Manbhoom	„ 30, '89	Nil	Weather—hot and cloudy. *Rubbi* crops ripening. *Mohwa* falling; outturn estimated at 8 annas. Price of rice rising.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

* Mean for six days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

[F]or the week ending Friday, the 29th of March 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. RAINFALL. Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1888. Mean for district.	Since 15th May 1888. Normal mean.	Since 15th May 1888. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	DISTRICT.	METEOROLOGICAL DIVISION.

[Th]e variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater.
[De]noting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal means
[...]rs. The means of the district are the numerical average of the rainfall return received in the district, i.e., from total rainfall at the sub-divisional

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 2nd April* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 29TH MARCH 1889.

At the close of the previous week weather conditions were slightly disturbed in South and East Bengal, and a few local storms had occurred on the 21st and 22nd in the south-east of the province. Owing to the gradual filling up of the depression that existed, weather conditions were improving, but a few local showers fell at the beginning of the present week in the neighbourhood of Calcutta and in East Bengal. Pressure then became very uniform, and though continuing to rise, the general distribution remained unaltered during the first half of the week. Temperature changes were generally irregular, a rapid increase taking place over small areas, while at others the temperature was very nearly normal. Strong south-westerly winds have continued blowing throughout the week at the head of the Bay. On Tuesday, the 26th, pressure fell, and a low-pressure area began to form in Northern India, partly extending over Bengal. On the following day it deepened considerably in North Behar and North Bengal, and a well-marked depression was formed, and the weather was very unsettled over the hills. The fall was very rapid over the whole of Bengal, and gradients became steep at the head of the Bay. Very little rain fell, however, in connection with the storm, the only report being ·1 inch at Darjeeling. Pressure rose with moderate rapidity on Thursday, and continued to rise slowly on Friday, when pressure became very nearly normal. During the latter half of the week conditions were slightly unsettled over the whole province, but beyond causing slight cloud, the fine weather was generally not interrupted.

Pressure.—Pressure rose at the beginning of the week and continued rising, while great uniformity everywhere prevailed during the first three days of the week. On Tuesday and Wednesday a fall occurred and a deep depression formed over the north of the province. The depression began to fill up on Thursday, and the rise continued slowly on Friday. Pressure was largely in excess on Monday, but in consequence of the rapid fall, it was from ·05 inch to ·1 inch in defect on Wednesday. After that pressure again rose and became very nearly normal by the end of the week. During the rapid fall of Wednesday some stations reported a fall amounting to nearly a fifth of an inch. For the whole week, however, the mean pressure has been slightly in excess of the normal, the excess usually ranging up to about 0·05 inch.

Temperature.—Temperature changes have been generally irregular during the greater part of the week, and there has been considerable diversity in the reports from the different stations. At most of the stations a rather rapid rise has been going on throughout the week, and temperature has been always in excess of the normal. On Thursday the maximum temperature at Cuttack was 107·9° and at Midnapore 106·4°. The only general fall that took place during the week was on Friday, and then it in no case amounted to more than 3°. The mean temperature for the whole province has been about 2° in excess of the normal. The largest excess was in East and South-West Bengal, where it has amounted to over 3°. In all the other districts, except North Behar, the mean was over 2° in excess, and for North Behar about 1°.

The general distribution of temperature for the week and its variation from the normal are seen in the following table, where the average maximum, minimum and mean temperatures at nine typical stations in different districts of the province are given. It will be seen from these figures that temperature has been rather largely in excess both during the day and during the night:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 29th March 1889.

	Normal mean maximum temperature for the week ending 29th March.	Actual mean maximum temperature for the week ending 29th March.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 29th March.	Actual mean minimum temperature for the week ending 29th March.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 29th March.	Actual mean daily temperature for the week ending 29th March.	Variation of actual mean from the normal.

Rainfall.—Skies have been slightly clouded during the whole week, but rain has been almost entirely absent, the only showers reported being a few in East Bengal, and in the neighbourhood of Calcutta in the early part of the week. A fall of ·1 inch occurred at Darjeeling on the 27th, but no further fall was caused by the depression which existed in North Bengal on Wednesday. Rainfall for the week has been everywhere largely in defect. In fact the only districts which show an appreciable average rainfall are South-West and East Bengal, but even here the amounts do not average more than a few hundredths of an inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 29th of March 1889:—

Meteorological Divisions.	Temperature						Rainfall									
	Highest observed during week.	Lowest observed during week.	Averages for week. Of highest of each day.	Averages for week. Of lowest of each day.	Averages for week. Of mean for each day.	Average mean of week above or below normal mean of week.	Of week. Average.	Of week. Normal average.	Of week. Variation.	Rainy days. Average number in week.	Rainy days. Normal average number in week.	Rainy days. Variation.	Since 1st of month. Average.	Since 1st of month. Normal average.	Since 15th May 1888. Average.	Since 15th May 1888. Normal average.

Meteorological Office, India;
The 1st April 1889.

A. Pedler,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE principal Municipalities in Bengal returned, during the week ending 16th March 1889, the birth and death-rates of 22·5 and 24·1 per 1,000 of population, respectively, as opposed to 24· and 21·8 per 1,000, respectively, in the preceding week ending 9th March, indicating a retrogression in the registration of births and an improvement in that of deaths.

2. Births and deaths were registered at the highest rates in the undermentioned Municipalities:—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Burdwan	54·9	Puri	79 7
Narainganj	49·7	Purneah	62 3
Comillah	46 2	Burdwan	51 9
Serampore	45·1	Utterpara	37·7
Durbhanga	44·1	Suburbs of Calcutta	37·6
Rampore Beauleah	39·4	Rampore Beauleah	34·2
Bhagulpore	34 4	Serampore	33 4
Monghyr	31·6	Durbhanga	32 3

3. The following table shows that, as compared with the outcome of the preceding week, there was an increase of mortality from cholera, but very small differences in the number of deaths from the other diseases mentioned in the table:—

	Ratio per *mille* during the weeks ending— 16th March 1889.	9th March 1889.
Cholera	4 7	3 7
Small-pox	2	·4
Fever	8 8	8 3
Bowel-complaints	3 1	2 4
Injury	·5	·5
Other causes	6 8	6 5

4. The Municipalities noted below were reported to have returned the highest death-rates from cholera, fever and the maladies coming under the head of "Other causes." The other diseases above named not exhibiting any noticeable local severity ·—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Purneah ...	51·9	Rampore Beauleah ...	26 3	Serampore ...	17·7

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 *and* 25 *Vict., cap.* 67.

THE Council met at the Council Chamber on Saturday, the 30th March, 1889.

Present:

The HON'BLE SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding*.

The HON'BLE SIR CHARLES PAUL, K.C.I.E., *Advocate-General*.

The HON'BLE H. J. REYNOLDS, C.S.I.

The HON'BLE C. T. ALLEN.

The HON'BLE SIR HENRY HARRISON, KT.

The HON'BLE SIR ALFRED CROFT, K.C.I.E.

The HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.

The HON'BLE C. H. MOORE.

The HON'BLE H. PRATT.

The HON'BLE SHAHZADA MAHOMMED FURROKH SHAH.

The HON'BLE DR. RASH BEHARI GHOSE.

NEW MEMBERS.

THE Hon'ble Shahzada Mahommed Furrokh Shah and the Hon'ble Dr. Rash Behari Ghose took their Seats in Council.

STATEMENT OF THE COURSE OF LEGISLATION.

THE Hon'ble the President said:—"I believe I am following the usual course in making a brief statement regarding the course of legislation which I think should be laid before the Council. I ought to begin by apologising to you for calling you together at this late period of the Session, at the end of March, with five Bills on the list, when you have been attending here without having any work to do in the way of legislation during the whole of the cold weather. But circumstances connected with the Bills have put me in such a position during the whole of these months that I had absolutely no Bill which I could bring before you, and every one of these Bills, as it happened, has been returned to me by the Government of India only within the last week. In the case of some of them this was due to the rule, with which you are all probably acquainted, that those Bills which have to be sent home to the Secretary of State have to remain in abeyance a couple of months in order to give him an opportunity of expressing any views he might have, with power, in case no reply comes from him within that time, to proceed to legislation. In reference to others there has been a continuous correspondence with the Government of India, and the shape legislation ought to take has only been practically settled within the last week or two. That, gentlemen, is my explanation and apology, but at the same time I must express my regret that I have called you together at the hottest period of the year to ask you to undertake the work of going on with these Bills

"I may as well deal with the Bills one by one and explain, as far as I can, what my own personal views are as to the progress which we are likely, or which we ought to, make in regard to them. The first Bill on the list is in the hands of the Advocate-General, and it is a Bill for the protection of the rights of fishing in private fisheries. The history of this Bill I propose to give at some little greater length than in regard to the others, as it is one of some considerable importance. It had its origin in a memorial which was sent up to the Government of Bengal last year by the British Indian Association, supported, besides, by a numerous and influential body of zemindars, both European and Native, outside that Association. The memorial was to the effect that an exclusive right in fisheries had always been possessed by zemindars, and the income from these exclusive rights were included in their assets on which the permanent settlement was assessed and on which revenue was levied; but that these exclusive rights which they had always been in the habit of freely exercising, and from which they derived a very considerable income, were now jeopardised by a series of decisions of the courts—decisions which, though they may not have changed the law, yet brought into prominence a reading of the law which left the zemindars without adequate protection, and in consequence of which the memorialists desire that the Government should legislate with the view of securing their rights. On receiving the memorial the Government of Bengal referred it to the Board of Revenue, with the view, if possible, of getting reliable figures to give something like an adequate idea of the value of the interests to be protected. The result of that reference has not been altogether satisfactory as far as getting anything like correct figures is concerned. But it had this effect that we have been able to obtain both from the Board of Revenue and the other officers consulted, who were the leading Commissioners of Divisions, very decided views as to the exceeding importance of the interests to be protected and the absolute necessity of doing something to protect them. I shall not attempt to go into details in regard to the legal aspects of the case, as these will be laid before you in a very much more efficient way by the Advocate-General; but, briefly put, I may say that whereas the opinion ordinarily held, doubtless by the outside public and certainly by many officers of the Government, was that in private fisheries of all kinds any one taking fish without permission might be punished, yet these decisions made it perfectly clear that that view was an incorrect one, that except where the fish might be enclosed in a tank or other water, in which there was no outlet to enable them to escape, there was no possession such as would enable the person who took them unlawfully, to be punished for theft or criminal trespass. The meaning of that was that there was no punishment or remedy to be found in the criminal courts. Of course no wrong was without its remedy, and people might go if they liked to the civil courts, but I need

not tell you that the idea of referring people to the civil courts for their remedy in a case where their fish had been stolen was more than a mockery. It was under these circumstances that the memorialists addressed us. I shall read just one or two paragraphs from the memorial.

'The result of these decisions, however correct they may be in law, has been to put in imminent jeopardy the rights of landholders and of the Government to fisheries in waters in communication with tidal streams and navigable rivers which, as above shown, are most valuable rights. An impression has gained ground in certain districts that where a julkur is not enclosed, the landholder has no right to the fish, and landholders' complaints of wrongful abstraction of fish from julkurs situated within their estates have since been generally dismissed.

'Your memorialists humbly insist that the right of landholders to julkurs situated within their estates and talooks, whether in the form of enclosed tanks, running streams, or large jheels and bheels in communication with tidal rivers, is unquestionable, and has been recognized in a long series of decisions.

'This right was recognized by the Mohammedan rulers of the country; and the British Government, in making a permanent settlement of the land revenue of these provinces, expressly incorporated in that settlement the rents and profits realizable from this description of property.'

"They go on afterwards to say—

'It would be worse than useless for private landholders, or even for the Government to endeavour to protect their rights by bringing civil suits against persons infringing rights of fishery by unlawfully taking fish, and your memorialists respectfully urge that it is imperatively necessary for the protection of these rights that such persons should be punishable summarily under the criminal law.

'It has been ably argued, and with much learning, that the taking of fish under such circumstances is not theft; but however that may be, it has generally, as shown above, been looked upon and treated as theft in this country, and your memorialists are convinced that no punishment, short of the punishment of theft, will be sufficient to deter offenders and afford adequate protection to the rights of your memorialists and of the Government.'

"After hearing from the Board of Revenue and the local authorities on the subject, the Government of Bengal applied to the Government of India recommending legislation. That Government assented and asked that the draft Bill be sent up to them. The grounds on which we made our recommendations were these:—

'There can be little doubt, therefore, that the value of julkur property will be seriously impaired, if not altogether destroyed, when the real state of the law becomes generally known and when the mass of the people realize that violation of julkur rights is not a criminal offence; for the people likely to commit such violations belong to the poorest classes, and it would be mere waste of money to sue them in the civil court. The result is that proprietors and lessees of julkurs have practically no remedy when their rights are attacked.

'The zemindars are clearly entitled on equitable grounds to ask that Government should provide adequate protection for property, from which it derives a considerable revenue, and the special character of which has been recognized throughout the entire period of our rule in India. The argument from expediency is equally strong. There can be no doubt that, when the state of the law gets generally known, there will be constant attempts made everywhere to fish in private fisheries without the consent of the owners. The landholding classes, if they find that the law does not afford them adequate protection in such cases, will take other means to protect right to which they attach great value, and there will certainly be many cases in which violence will be used on one or both sides if the law is left as at present. The economic argument is also not without considerable weight, that unless these rights are protected, there will be a serious diminution in the fish supply, owing to the wanton destruction and waste of fish which will result. From this point of view, the promiscuous killing of fish by a crowd of persons is much to be deprecated; for while the benefit to the poorer classes could only be temporary, it would certainly be purchased at the cost of a diminution of the fish supply in the future.'

"The Bill was sent on to the Government of India, with a suggestion on my part that, as probably the same difficulties would be found in other provinces besides Bengal, the Government of India themselves might be willing to legislate on the subject in the Viceroy's Council, but upon that point their reply was in the negative, as the peculiar state of circumstances existed principally in Bengal and Assam. They, therefore, recommend that legislation should be undertaken in this Council. The Advocate-General will tell you what the details of the Bill are, but the punishment provided is very lenient, as for the first offence a fine of Rs. 50 will be inflicted, and for subsequent offences imprisonment for one month and a fine of Rs. 200. I do not think there will be much difference of opinion as to the propriety of this legislation

on principle, but I have no doubt there will be certain difficulties with regard to the definition of private fisheries, and it is to this point that the Select Committee will have to devote considerable attention. The Bill, I trust, will be brought in next Saturday and referred to a Select Committee. Its subsequent progress will of course depend upon the view the Select Committee will take of it. The question is one of some importance, and the sooner protection can be given to the zemindar, I think you will all agree, the better. So much for the Private Fisheries Bill.

"The next is a Bill 'to consolidate the Calcutta and Suburban Police Superannuation Funds.' This is a small technical matter, which Sir Henry Harrison will explain to you, and on which I need not dwell.

"The next Bill is one of more considerable importance. It is in its inception a purely consolidating Bill to bring into one form or Act the law which at present runs through several, and opportunity will be taken to make several alterations and changes. There has been considerable discussion as to whether a considerable alteration should not be effected in the financial position of the Port Commissioners; but this having been negatively decided by the Government of India, the changes really made in a substantive part of the law are not very considerable. This Bill will also be referred to a Select Committee next Saturday, but its future progress is not a matter of immediate urgency, and I shall not urge you to press on with it beyond what the Select Committee thinks fit to advise.

"The next Bill 'for the appointment of a Mohammedan Burial Board in Calcutta' is the outcome of the enquiries and cogitations of a Committee appointed last year to take into consideration the bad state of the many Mohammedan burial-grounds and the difficulties that are to be met with in controlling and in finding more room for the burial of Mohammedans in new burial-grounds. The Committee was a very strong one, for it had representatives of the Mohammedan community as well as officers of the Government and Municipality in it, and their recommendations have been embodied in this Bill which Sir Henry Harrison will explain to you.

"The last Bill is one which I shall have to explain to you at a later period of this morning's business. I may say now that it had its origin in a serious outbreak of cholera last year, in which nearly 600 coolie emigrants to Assam died, and which led to the Local Government putting an end altogether to coolie emigration from some of the labour districts. I will reserve further details till I ask for leave to introduce it; but I wish only to mention now that I look upon this Bill as the most urgent one we have on our list, because the cholera season is now on, and if anything at all is to be done it should be done quickly.

"I have only one thing more to say, and it is a subject which I approach with great regret. It is to inform you that this is the last day on which I believe we shall have the advantage of the mature counsel and experience of my hon'ble friend Mr. Reynolds, who has sat so long in this Council and has assisted it so ably. I am quite sure I am expressing not only my own views, but the feeling of all the Members of the Council in saying that it is with extreme regret we look to his departure, and both this Council and the Government generally will feel the severance of his connection as a severe loss to the public."

PRIVATE FISHERIES BILL.

The Hon'ble the Advocate-General moved for leave to introduce a Bill for the protection of the right of fishing in private fisheries. He said:—

"Private rights of fishery as opposed to public rights of fishery may be broadly classed under the following heads: the right of fishing in navigable rivers granted by the Government to private individuals. Rights of this description have been granted according to the law of this country, but have been discontinued since 1868. Secondly, the right of fishing in Government estates granted to private individuals; and thirdly, rights of fishery granted to zemindars on the assessment of revenue which they continue to pay. Civil suits may, no doubt, be successfully maintained for the infringement of private rights of fishery, and where injuries are threatened, or often repeated, I believe the Civil Court would grant an injunction. The remedy by civil

suits, however, is dilatory and expensive, and having regard to the class of persons, the poorer classes, who would be likely to infringe these private rights of fishery by fishing and taking fish, it may well be said that the remedy by civil suit would be a mere waste of money. Under these circumstances, it is evident that, in order to provide an effective remedy against the infringement of private rights, a remedy of a summary and coercive character should exist.

"On turning to the memorial of the British Indian Association, I find the following statement: "Under British rule, both before and after the passing of the Penal Code, Magistrates have been in the habit, in accordance with the popular view, of convicting of theft persons proved to have unlawfully taken fish," and I find the same view held by two officers of experience, one of whom is Mr. Smith, the Commissioner of the Presidency Division. In his letter of the 21st April, 1888, addressed to the Board of Revenue, he says:—

'To make the offence punishable as theft would be only to legalise what has been the uniform custom of the country until recent decisions have questioned the legality of the practice.'

"Mr. Lowis, Commissioner of the Rajshahye Division, in his letter of the 21st June, 1888, concurs in the same view of the matter. I have not been able to find that this was the law of this country at any time. I have not been able to discover a single case in the Nizamut Adawlut reports, and the Mohammedan law contains no provision constituting the taking of fish out of water which forms the subject of a private fishery a criminal offence. The reference made by the British Indian Association to the Hidaya in paragraph 2 of their letter does not touch the question.

That being so, I now turn to the decisions of the High Courts. These decisions have been carefully collected for the Bengal Government, and although most of them bear in the same direction, I shall merely refer to a few of them. In a case decided on 20th March, 1873, by Justices Kemp and Pontifex, it was held that the taking of fish from a public navigable river in which another has a right to fish is not theft, nor does the catching of fish in a navigable river render the person so doing liable to be convicted under the Penal Code. That case is reported in the 19th Vol. of the Weekly Reporter, Criminal Rulings, in page 47. I find in a Madras case of 23rd October, 1878, (Indian Law Reports, 5, Madras Series, 391, note) it was held that fish living in open irrigation tanks were not in possession in such a sense as to render their capture and removal a theft. In a Bombay case (Indian Law Reports, 10, Bombay, 193), where the accused were found fishing without permission in a municipal tank, it was held that they could be convicted of theft, as the tank from which the fish were taken was apparently an enclosed tank and the fish were therefore of restrained liberty and liable to be taken at any time according to the pleasure of the owner, and were therefore subjects of theft. Then a case came before Chief Justice Petheram and Mr. Justice Ghose, known as the Meherpore case, in which it was decided that fish in a *bhil* or natural lake was the property of no one, and until reduced into possession no property could be acquired by any one, and that the capture of such fish in a wild state could not be the subject of theft.

"Then, there was another decision of the same two Judges in July 1887, affirming the same principle; and lastly, there were two decisions of Justices Norris and Ghose, to the effect that fish in a public river could not be said to be the property of the person who may have the fishery right, and that where a tank was dependent on the overflow of a neighbouring channel which was connected with flowing streams for its supply of fish, and that the fish could leave it at pleasure, the taking of fish from such tank was not theft. Now the first decision of the Chief Justice and Mr. Justice Ghose in 1887 was a decision which broadly laid down that there could be no property in fish in a natural state and not restrained of liberty, and I would also point out that although in that case the fish were in a *bhil*, the *bhil* was fed by channels which communicated with natural streams on two sides Were it assumed in that case that at the moment of time when the fish were captured the *bhil* resembled a tank having no communication at that time with other waters, no conviction for theft in respect of the taking of fish would have been sustainable at the instance of the complainant, who had merely a fishery right in such *bhil*, the *bhil* itself and the water it contained belonging probably to the zemindar.

"Now an elementary principle of English law was laid down thus:—

'There is a principle of our law which will be noticed more fully in its proper place that, in general, no man can make title to animals *feræ naturæ*, for these while they remain wild are accounted *nullius in bonis* (or what amounts to the same thing) as the common property of mankind.' (Stephen's Commentaries, page 684.)

"The Roman law was substantially the same. Sander's Institutes of Justinian, p. 96:—

'Wild beasts, birds, fish, that is, all animals which live either in the sea, the air, or on the earth, as soon as they are taken by any one, immediately become by the law of nations the property of the captor, for natural reason gives to the first captor that which had no previous owner. And it is immaterial whether a man takes wild beasts or birds upon his own ground or on that of another, &c.'

"Deducing a principle from the nature of the subject itself, it appears to me that the elementary principle of law to which I have referred is of general application, applicable to this country as elsewhere. The Judges who decided these cases in the High Courts merely applied an elementary principle of law of general application. And if I may be permitted to say so, I think their decisions are sound and accurate. The case decided by Justices Kemp and Pontifex in 1873 seemed to produce no alarm, nor was it, as far as I know, the subject of any hostile criticism. But the later decisions in the Meherpur case and in one or two other cases have been objected to, and have been assailed with considerable warmth. I am prepared to admit that the Judges of the High Courts are not infallible, but I think those who endeavour to impeach the decisions of the highest tribunals of this country and the opinions of Judges of experience should put forward a strong case. Such a case might be made by reference to decided cases which contravene the decisions objected to, or by challenging the principle on which the decisions are rested, or by showing that other acknowledged and well-recognised principles apply to the subject itself. Now, those who have made objections have done nothing of the kind. As far as decided cases go, there are absolutely none that could be brought forward. With regard to contravening the principle upon which the Chief Justice based his decision, I may say that the proposition is too elementary and too well-founded to be controverted. No attempt was made to show that any other well-recognised principle of law applied to the case. Under these circumstances the objections, as far as I am aware, resolve themselves into irrelevant arguments, vituperative assertions, and an array of words which exhibit a confusion of thought as to the meaning of "property" and "possession," and demonstrate nothing beyond a want of familiarity with the subject under consideration.

"The propositions which have been laid down by the High Courts are summarised ably and tersely by Mr. Edgar. He says in his letter of 6th September, 1888, as follows:—'The law relating to this subject, as gathered from the series of judicial decisions given in Mr. Beeby's note, may be summarised as follows:—

'There is no remedy under the criminal law in the case of the infringement of julkur rights, except where the fish are taken from an enclosed tank in which they had been restrained from their natural liberty. The fact of fish being in a public river does not make the fish in it the property of the person who has the fishery right in such river, and nobody can be said to be in possession of them, as they are *feræ naturæ*. The right of fishing is not properly of such a nature that a man who infringes it can be said to commit criminal trespass. Fish in a tank enclosed on all sides, but dependent upon the overflow of a neighbouring channel for its supply of fish, are not restrained of their natural liberty at a time when floods are high, and are consequently under such circumstances *feræ naturæ*, and their capture is not a criminal offence. Wild fish in a *bhil* are not the property of any person till caught, nor are fish in a creek or in an open tank made for the purposes of irrigation. On the other hand, it is theft to take fish from an enclosed tank where fish are restrained of their natural liberty and are liable to be taken at any time by the owner of the tank.'

"The decisions of the High Court having disposed of the question of taking fish otherwise than from an enclosed tank, and pronounced it not to be theft, it follows that there can be no criminal trespass, viz. trespass done with the view of committing a criminal offence. In the same way all notion of criminal misappropriation disappear, because there must be something appropriated which was the property of some one. There being no property in the fish, it follows that a charge of criminal misappropriation does not lie.

"His Honour the President has already referred to the memorial of the British Indian Association, which appears to me to state the case of the

zemindars in a temperate spirit and to be supported by very fair reasoning, although I do not agree in some of the legal positions taken in it. This letter shows what I have adverted to, namely, that, in the present state of the law, there is no sufficient or efficient protection of private rights of fishery. It is therefore necessary that some coercive measure should be introduced by the Legislature for the protection of private rights of fishery; and that will be the object of the Bill I ask leave to introduce.

"The Bill will be a short one, and will be directed to three points, viz. to make the infringement of private rights of fishery punishable under the law, to make trespass penal under the same circumstances, and to prevent persons using contrivances and devices for the purpose of catching fish which they have no right to take. I think the Bill will be sufficient to effect the purposes in regard to which the British Indian Association has addressed the Government."

The Motion was put and agreed to.

POLICE SUPERANNUATION FUNDS BILL.

The HON'BLE SIR HENRY HARRISON moved for leave to introduce a Bill to consolidate the Calcutta and the Suburban Police Superannuation Funds. He said:—

"As His Honour the President has already stated, this Bill is a small one. It merely amends one or two sections in the existing law, and I can briefly describe the object of it. The Police Forces of the town and suburbs are both under the Commissioner of Police, but by law they are separate forces, and the funds for providing pensions for the lower grades of officers and men for each of these two forces have hitherto been separate funds, but as a matter of fact the two forces have been practically very closely allied to one another. It is natural that the superior officers of the Police have availed themselves sometimes of the services of the town police in the suburbs and *vice versâ*, and transfers of officers and men between the two forces have been frequent. Some time ago it was found that of the two Police Superannuation Funds, that of the town was apparently quite solvent, while that of the suburbs was falling into a state of insolvency. In a letter which I as Commissioner of Police addressed to the Government in 1886, I pointed out the condition of the two funds, and the reasons for the conditions in which they respectively were. The reason for the different conditions of the two funds was this, that every policeman drew his pension or gratuity from the fund of the Force to which he was attached at the time of his retirement, irrespective of the Force in which his services had been performed. It would probably have been more strictly correct if his services in each force had been counted up, and the pension or gratuity were drawn from the two funds in proportion to the term of his service in each Force. It had been assumed that there would be an equal quantity of give and take, but that had not been the case. In the suburbs the men were more unhealthy, and there was a larger proportion of retirements, and hence while the men drawing pensions from the Town Fund were only a fraction exceeding four per cent., those from the suburbs were more than nine per cent., and the gratuities paid were somewhat in the same proportion. It was pointed out that the fairest course would be to treat the two Forces in law, as they were in fact, as one and the same Force, and to amalgamate the two Superannuation Funds. I think satisfactory reasons have been adduced to show that this would involve no practical injustice to either Force, and after considerable correspondence between the Government of Bengal and the Government of India, it was finally decided that that was the proper course to adopt. The object of the present Bill was simply to unite and amalgamate the two Police Superannuation Funds."

The Motion was put and agreed to.

CALCUTTA PORT BILL

The HON'BLE MR. REYNOLDS moved for leave to introduce a Bill to consolidate and amend the law relating to the Port Trust of Calcutta. He said:—

"The Calcutta Port Trust is a Corporation which has not yet attained to the age of legal majority. It was established, as the Council is probably aware, under Act V of 1870, and is consequently 19 years of age. But if it is an infant,

it is a thriving and vigorous one. No one who remembers the condition of the river foreshore 20 years ago can refuse to the Port Commissioners the right to indulge a feeling of pardonable pride in the improvements they have effected. The reclamation of the river banks, the jetties, the tramway, the tea warehouse, the petroleum depôt, the improved light ships, the admirable charts of the river which have been issued, are all monuments of the energy and success with which the Port Commissioners have discharged the duties entrusted to them. They are now engaged upon the greatest work they have yet taken in hand—the construction of the docks at Kidderpore. This work is making excellent progress, and it may be confidently anticipated that it will prove a great financial and commercial success. The operations of the Port Commissioners have not been confined to the Calcutta side of the river, for on the Howrah side they have reclaimed a large tract of land, and have made an excellent road along the foreshore. And all these improvements have been effected not only without any addition to the charges upon trade, but with an actual lightening of them. Calcutta from its geographical position can never be a cheap port, the fees for pilotage and towage must always handicap this port when compared with Bombay, but the Port Commissioners have been able to reduce the pilotage charges, and to do away altogether with the port dues which were formerly levied. As a port due produces about Rs. 80,000 for each anna of the rate, the abolition of a four annas port due implies a relief to the shipping to the extent of about three-and-a-quarter lakhs per annum.

"Honour should be given where honour is due; and I therefore think it right to say that the success which has attended the administration of the Commissioners has been largely due to two individuals: to their first Chairman, Mr. Schalch, who laid down the lines of policy which the Commissioners have steadily followed, and to Mr. Duff Bruce, who was for 17 years the Vice-Chairman and Engineer of the Port Trust. But in bringing out these two names for special mention, I ought to add that their efforts would have had little result if they and their successors had not enjoyed (as I am happy to say they have enjoyed) the confidence and the co-operation of the Chamber of Commerce and of the mercantile community in general. Mr. Schalch may have been the head, and Mr. Bruce the right hand, but the backbone of the Port Trust is, and always has been, the Chamber of Commerce.

"The legislative charter of the Port Trust is Act V of 1870, but this Act was necessarily of a somewhat tentative character, as the establishment of a Port Trust in Calcutta was at first of the nature of an experiment. The experiment had been tried in another form by Act X of 1866, which vested the management of the Port in a Committee of the Calcutta Justices. The experiment in this form proved a failure, and hence it was natural that the Act of 1870 should have been somewhat cautiously worded, and should have contained various restrictions But as the duties and responsibilities of the Commissioners increased, and their administration was shown to be successful, the original Act of 1870 was supplemented by a number of amending Acts, all of which were in the direction of extending the powers conferred on the Commissioners. The most important of these are Act IV of 1880, which deals with the borrowing powers of the Commissioners; Act II of 1885, which authorized the construction of the Kidderpore Docks; and Act III of 1887, which introduced the elective principle into the constitution of the Trust.

"The result is that now we have altogether nine Acts dealing with the Port Trust of Calcutta, and I believe the Council will agree that the time has come when it is advisable, and indeed necessary, that these Acts should be consolidated. The Bill, as I have said, is in the main a consolidating measure, but occasion has been taken to introduce some amendments. I need not at this stage of the Bill go into details, but I should like to call attention to one or two of the more salient provisions of the Bill. I would first ask attention to the title of the Bill which in itself is an acknowledgment of the good work which the Port Commissioners have done. The title of this Bill is to be 'The Calcutta Port Act, 1889.' The title of Act V of 1870 is 'An Act to appoint Commissioners for making Improvements in the Port of Calcutta.' The improvements contemplated by that Act have now for the greater part been made, and the main duty of the Port Commissioners in future would not be to make improvements, but to manage and administer a port which has already been improved. The first Chapter

of the Bill relates to the constitution of the Port Commissioners, the number of whom it is now proposed to increase. I may remind the Council that by the original Act nine Commissioners were appointed, but it was very soon found necessary to raise the number to 12, and in 1881 it was raised to 13, with the object of adding a member to represent Howrah. In the Act of 1887 the number was still kept at 13, but it was enacted that two of the Commissioners should be natives. By that Act four of the Commissioners were to be appointed by the Chamber of Commerce, one by the Trades' Association, and one by the Calcutta Municipality; that made six; and seven were to be appointed by the Government, so that unless some of the elected members were natives, two of the number appointed by the Government must be natives. That restricted the choice of the Government to a very small number of persons, and it was desirable that the Port Trust should contain some one representing the Marine Department and also some representative of the Railways. Under this Bill it was proposed to increase the number to 15, consisting of a Chairman, a Vice-Chairman, seven elected members and six nominated members, and it was still provided that not less than two of the members should be natives. Of the seven elected members, four were to be elected as now by the Chamber of Commerce, one by the Trades' Association and one by the Municipal Commissioners of the town, and the seventh was to be elected by such body or bodies or firms representing the native mercantile houses, as the Lieutenant-Governor might direct. The Council would remember that this proposal was brought forward when the Act of 1887 was under discussion, but it was not then thought that the time had come for introducing a provision of the kind. The only other change proposed in the constitution of the Trust was the section which proposed that the Chairman and the Vice-Chairman should not vacate their offices at the end of two years, like the other Commissioners, who were appointed or elected, but should continue to hold office during the pleasure of the Government. The next Chapter of the Bill dealt with the borrowing powers of the Commissioners, and here no material changes were proposed. The debt of the Port Trust at present might be classified under four heads. First, there was the item of Rs. 17,65,000, which represented the value of the block made over to the Port Commissioners by the Government when the Trust was established in 1870. The principal of that amount was not repayable, but only interest at 4½ per cent. payable half-yearly. The second item was the amount of the unliquidated portion of the sum advanced by the Government to the Port Trust between the years 1870 and 1880, and which is being repaid by a sinking fund, under which the whole amount will be repaid in 30 years; the present amount was about 40 or 42 lakhs. The third item consisted of the public loans which had been raised, of which there were three, aggregating 60 lakhs. These were secured by debentures, which would be repaid at the end of 30 years. And the fourth item consisted of advances made by the Government for the construction of the Kidderpore Docks, the amount expended up to the present time being about 125 lakhs. The Bill proposed that the amounts due under these several heads by the Port Commissioners should be secured on the entire property and income of the Trust, that principle having been accepted when the Acts of 1880 and 1881 were passed. Some hon'ble members may recollect that when the Act of 1880 was passed, the wording of the Act was considered to be such that it gave to the Government and the Secretary of State some amount of advantage or preference for the recovery of the amount due to them as compared with the public creditor who might lend his money. How far that was really the case, I can hardly say. However, it was sufficient to make the raising of loans unsuccessful, and another Act was passed in 1881 making it perfectly clear that the Government and the Secretary of State would fall under the same category, and have the same rights, as any other creditor, and that was the principle adopted in framing this Bill.

"I do not think there is anything further of much importance that should be mentioned. A few provisions have been inserted in order to enable the Commissioners to give pensions to their servants and to define more clearly the position and duties of the River Police; also some sections relating to the mode of preparing the budget which would merely legalise the practice which has prevailed for many years, but which is not strictly in accordance

with the letter of the previous Acts; and there was also a provision defining the liability of the Commissioners in respect of goods whilst in their custody."

The Motion was put and agreed to.

MOHAMMEDAN BURIAL BOARD'S BILL.

The HON'BLE SIR HENRY HARRISON moved for leave to introduce a Bill to provide for the appointment of a Mohammedan Burial Board in Calcutta. He said:—

"As His Honour the President has already explained, this Bill is due to the report of a Committee which sat last year to inquire into the question of Mohammedan cemeteries. The Mohammedan community, as was well known, like the Christian community, disposed of their dead by burying, and as that community in and around Calcutta exceeds 200,000 souls, it was evident that the question of the burial of their dead was well worthy the attention of the Legislature. Hitherto, possibly owing to the wise policy of the Government to abstain to interfere as far as possible in all religious matters, no continuous action had been taken in regard to Mohammedan cemeteries, but the same cause which made the Government hold its hand had in fact paralysed the Mohammedan community, because they had no power to regulate the affairs of their own cemeteries, and it was quite in accordance with the wishes of that community that what I may call an enabling Act should be passed which would enable them by means of a Board of the Mohammedan community, assisted by some of the local officials, to control and regulate the affairs of their own public cemeteries. There are possibly over a hundred Mohammedan cemeteries of all kinds in Calcutta and the Suburbs. The greater portion of these are private cemeteries, and they are usually well looked after by their owners. But there are about twelve public Mohammedan cemeteries which are under no adequate control. The effect of the Bill would be that a Mohammedan Burial Board would be appointed which would have power to frame rules to control and regulate burials in these public cemeteries and charge fees, and though they would have a hard task before them, the effect would be very beneficial, as they would have the power not only to prescribe the conditions under which burials should take place, but also to extend the ground available for interment."

The Motion was put and agreed to.

EMIGRANTS' SANITATION BILL.

THE HON'BLE THE PRESIDENT moved for leave to introduce a Bill to provide for the sanitation of emigrants during their passage in Bengal to the labour districts in Assam. He said:—

"As I mentioned just now, the immediate urgency of this Bill is the serious outbreak of cholera which occurred last year, leading to more than 600 deaths among coolies, nearly all of whom were emigrants from certain districts. But that was not the only cause; and in order to explain the remoter reasons for the Bill, I shall have to go a little further back. You are all aware that, previous to the introduction of Act I of 1882, all emigration to Assam was controlled by the Government. It was penal to take or assist any coolies to emigrate except under certain specific restrictions. The recruiter who collected coolies was licensed, and before he was so licensed, enquiries were made into his character, and he was registered before a Magistrate, who knew where he could put his hand on him, and who also knew where he could put his hand on the contractor under whom he worked; and, similarly, the garden sirdar got his certificate from his employer, which certificate was registered before the Magistrate. Then, after the coolies were collected, they were taken to a depôt which was open to the Magistrate's inspection, and was subject to sanitary control. Whether the depôt was in Calcutta or elsewhere, it was constantly supervised and inspected. After being collected, the coolies were placed before the Magistrate of the district in which they were collected. They were detained there a short time by the Magistrate, and there they entered into contracts for labour. When this was done, they went up to Assam under the supervision either of a garden sirdar or of the contractor's people, and

in any case they went along a specific route. They stopped at certain specified places where sanitary arrangements were made, they were inspected and looked after, and, where needed, medical services were secured by the Government. The man in charge had a way-bill with the names and numbers of the emigrants, so that they could be traced and enquiries made all along their route, and their sanitation, at all events, was carefully looked after. That was the state of the law until Act I of 1882 came in. That Act maintained the old system practically without alteration in regard to these coolies who were collected by garden sirdars and licensed recruiters, and by contractors who were registered. But simultaneously with that system Act I of 1882 allowed another system to grow up. The framers put in a new section, to say that nothing in this Act should interfere with coolies going up to Assam otherwise than under this Act. Unquestionably the framer of this Act looked forward to a number of free coolies finding their way to Assam, and who, when they got up there, could give their labour to whomever they chose, or, if they did not like to do so, could come back again, and who, to a certain extent, might take advantage of what is termed 'haggling in the market' for what wages they wanted. If the vista which rose before the view of the framers of the Act had been a real one, if what they foresaw had actually come to pass, and a number of free coolies had found their way up, it would have been pleasant for the coolies, it would have been pleasant for the Government, it would have been well for Assam, and it would have been the first step towards getting rid of a penal Act. But what did occur has been the reverse of what the framers of the Act expected. They wanted to get rid of middlemen, the recruiter and contractor, who collected these coolies. They wanted to get rid of these men, and also no doubt to get rid of the expenses which that system involved. But what has happened? The contractor remains, and he is neither licensed or known to the Magistrate; the recruiter remains, and he is not registered or licensed, and no enquiry into his character made; anybody can go about to do the business, and the natural result is that it has gravitated to the lowest and worst possible characters. The coolies collected under this system are 'free' coolies; they are lodged in the recruiter's depôt: this depôt is not inspected, nor is it under the Magistrate's control, and the coolies may be here to-day and in another place to-morrow. No one has power to supervise them. There is not that opportunity which the Magistrate ought to have of enquiring who the recruiters are, or who their coolies are, and to all intents and purposes they remain outside the control and supervision of the Act. There is no possibility of protection, and there is no sanitary regard for them. Thus they are at the mercy of the recruiters and sirdars, and when once collected they are carried off to Assam without any more sanitary supervision than that of any ordinary passengers.

"The difference between them and the ordinary passengers is that they go in hundreds and have to stay wherever the contractor's men wish to stay; they cannot easily escape, their communications with the outer world are, to a great extent, cut off, and if cholera breaks out among them they are helpless. As I said before, cholera broke out among them last year. Advice was asked for and was received from the Sanitary Commissioner and from the Superintendent of Inland Emigration. Under their advice the officers of Government used what powers they had to examine and control the sanitary condition of the depôts wherever they were found, and some arrangements were made by the Government railways for providing medical attendance and sanitary supervision of the coolies on their railways; but these executive arrangements had but little legal basis and were at the best insufficient, and ultimately the flow of emigration had to be stopped entirely both from Ranigunge and from Chota Nagpur. It was in July last that I addressed the Government of India on the subject. The sanitary condition of affairs was the urgent and immediate need; but I also took the opportunity, perhaps unfortunately, of suggesting that the matter of the registration and licensing of these middlemen and agents should be taken up and dealt with by the Legislature at the same time. The result of my bringing the two subjects together in the same letter, and recommending legislation on both of them, was that the question of the registration and supervision of middlemen, which necessitated unquestionably the alteration of Act I of 1882, was referred to the Chief Commissioner of Assam, and after some correspondence was postponed to be dealt with when the report

of the Chief Commissioner should be received as to the working of the Act generally with the view of considering what alterations in Act I of 1882 were necessary. This discussion has practically taken up a good deal of the last part of the current year. In the meantime the sanitation part of the subject was for the time being postponed. Finally, I proposed that the Government of India might approve of a temporary Sanitary Act which might bring all middlemen taking free coolies to Assam under the same rules as those which now apply to garden sirdars and their recruits.

"I ought to have mentioned before that, whereas, two years after Act I of 1882 was passed, the number of coolies who went up the Brahmaputra valley under registration, that is to say, under the contract section of the Act, was about 13,000: the number of those who took advantage of the new section was in 1884 about the same number, viz., 12,000. Gradually, however, the free coolies, as they are called, as might be expected, gained very largely over the contract coolies, that is to say, the advantage of not being put under any supervising or controlling power, and of putting your coolies under contract on arrival at Dhubri instead of here in the district, is obviously found more convenient to those who collect coolies than to have them registered at the place of collection and carried on under the supervision and control of the Act; so that at the present day something like 85 per cent. of free coolies arrive not under the control of the law. During the last year the number of coolies recruited under the supervision section was 3,800, whereas the number of free coolies was 21,800; in other words, the free coolie system is rapidly displacing the other one, and I think I have sufficiently shown that all the conditions require them to be brought under sanitary supervision just as much as coolies under contract, and fully justify the measure which I ask for leave to bring in. As I have said, I sent up a suggestion to the Government of India this year for bringing them under the same rules as garden sirdar-coolies, and after a little consideration the reply from the Government of India was that this would involve a distinct alteration of Act I of 1882 which this Council is powerless to pass, and they suggested instead that the Bill should take another shape, that is, the shape in which it has been now drafted, which they assure me is within the scope of this Council. They have sent up a sketch of the Bill in order to show the shape which it might take without encroaching upon the special power reserved to the Viceroy's Council. The Bill really requires the Lieutenant-Governor to make rules for all necessary sanitation. I propose, if the necessary power of this kind is given me, to exercise it by merely taking the rules as they now exist with regard to garden sirdars, and by making the necessary alterations and bringing the two classes as closely as possible under the same sanitary supervision. The Bill does not go beyond sanitary supervision, and under the circumstances it is just as well it does not. I am very anxious that the whole subject should be very carefully considered, for if any general Bill is passed it must be passed in the Viceroy's Council, and not in this, but in the meantime I feel there is a very urgent and serious responsibility laying upon us not to allow the cholera season to pass without at least doing all in our power to check the grievous mortality and the sufferings to which I have alluded, and now it is my duty to ask you to assist me by allowing me to introduce the Bill which will be laid before you next week with the necessary papers on the subject."

The Motion was put and agreed to.

The Council adjourned to Saturday, the 6th April, 1889.

CALCUTTA; } *The 4th April*, 1889. }

C. H. REILY,

Assistant Secretary to the Govt. of Bengal, Legislative Dept.

WORKING OF THE INLAND EMIGRATION ACT, I OF 1882, IN CHITTAGONG.

GENERAL DEPARTMENT—INLAND EMIGRATION.

Calcutta, the 3rd April, 1889.

RESOLUTION.

READ—

Memorandum No. 246GM—IX-5, dated the 9th March, 1889, from the Commissioner of the Chittagong Division, and enclosed report from the Magistrate of Chittagong, on the working of the Inland Emigration Act I of 1882 during the year 1888.

The number of labourers employed under the Act in Chittagong, which has been decreasing for many years, fell during 1888 from 433 to 257, the diminution being due to the growing and laudable preference of employers for free labour. No coolies are entered as imported during the year, and only 82 executed local contracts. There were as many as 36 desertions with 13 cases of imprisonment, and the Magistrate of Chittagong states, in explanation of the large proportion which these figures bear to the return of labourers employed, that "the reasons for the unusual increase of the number of desertions, convictions of labourers, and cancelment of their contracts may be ascribed to the fact that a considerable number of free coolies struck on one large garden on which they had been living and working and went and executed local contracts with another employer, but afterwards they changed their mind and left the garden of the latter; according to him they were enticed away from him by their former master." The work of inspection was very inefficiently performed, and under the circumstances the statements in the report as to the good treatment of labourers must be taken as founded rather on the general knowledge of the Magistrate than on any special experience gained during the year. The Lieutenant-Governor has no doubt that in Chittagong the small and diminishing minority of coolies bound by contracts under the Act are treated exactly as the free labourers with whom they work.

2. The report is of interest as being the last of its kind which will be submitted for a complete year in this Province, the system of statutory contracts having been abolished in Chittagong by order of Government, with effect from the first day of the current month. The present report affords further evidence that such an exceptional system is not necessary in that district, where the conditions of labour are not different from those prevailing in other parts of Bengal. The penal contracts, provided originally to meet the case of the importation of workmen from a distance at the cost of employers, appear to have been used of late to bind local labourers, occasionally obtained from a neighbouring garden, with a strictness altogether unnecessary, one result being that a considerable proportion of them (this year more than 5 per cent.) were sent to jail for offences unknown to the ordinary law. That no great advantage accrued to the employer from the system is suggested by the fact that 14 per cent. of the labourers under statutory contract deserted during the year.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 6th April 1889.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
	Western Districts.		
Burdwan Divn.			
1	Burdwan April 6, '89	Nil	Weather—hot and dry. Estimated outturn of sugarcane and *til* 12 and 10 annas respectively. Price of rice has risen at Culna to 14 seers per rupee, elsewhere stationary. No sowings. A very small area ploughed. Outbreak of cattle pox reported from Cutwa and Culna sub-divisions.
2	Bankoora „ 6, '89	Nil	Weather—hot and sultry. *Khosta til*, indigo and cotton doing well. Rain wanted for ploughing. No change in prices.
3	Birbhum „ 6, '89	Nil	Weather—hot and dry. No crops on the ground now, except *til* and a little cotton. Rain would be most useful for ploughing.
4	Midnapur „ 6, '89	Nil	The rain-clouds have passed off, and the weather has become hot very rapidly. The *boro* crop requires rain, and there is not enough water in the canal to supply the irrigable area. In the Tamluk sub-division the *boro* crop is expected to be at least a twelve-anna one.
5	Hugli „ 6, '89	Nil	Weather—seasonable. *Boro* rice, of which there is a small quantity, is suffering from drought. Tobacco and garden crops are doing well.
	Howrah „ 8, '89	Nil	Weather—hot. Slight hail in Domjur on the 23rd ultimo. *Boro dhan* promises well.
	Central Districts.		
Presidency Divn.			
6	24-Perghs. April 6, '89	Nil	Weather dry and sultry. Harvesting of *rubbi* crops over; outturn estimated in some of the sub-divisions between 10 and 11 annas. Rain much wanted. Prices of food-grains range from 14 to 16½ seers per rupee.
7	Nuddea „ 6 '89	Nil	Weather—days hot; nights comparatively cool. Harvesting of *rubbi* completed; outturn of linseed, tobacco and gram about 10 annas. Rain somewhat urgently wanted for ploughing operations.
8	Khoolna „ 6, '89	Nil	Weather—hot during the day with rather high wind. *Boro* and *til*, which are the only crops on the ground, are said to be suffering in some parts for want of rain.
9	Jessore „ 6, '89	Nil	Weather—hot and dry. No crops on the field. Jute and *dhan* sowings being deferred for want of rain. Want of it becoming urgent.
10	Moorshedabad „ 6, '89	Nil	Weather—hot and a little cloudy. Lands are being prepared for *aus*, but rain is much wanted. *Rubbi* harvesting finished; 12 annas outturn reported from the Jangipore sub-division.
Rajshahye Divn.			
11	Dinagepur „ 6, '89	Nil	Westerly winds changed to easterly. Weather hotter than usual. Outturn of sugarcane 14 annas. Jute and *bhadoi* being sown.
12	Rajshahye „ 6, '89	Nil	Weather—very hot, but seasonable. Outturn of wheat, pulses, mustard, linseed and *cheena* 10½ annas on an average. Sowing of jute, *boro* paddy, and *til* going on. Sowing of *amun* stopped for want of rain. Rice sells at 16½ seers per rupee.
13	Rungpur „ 6, '89	Nil	Weather—extremely sultry. Germination of early rice is hindered by the continued absence of rain. Jute sowings also retarded owing to the same cause. Harvest prospects will be poor if rain does not fall in the course of the next week or so.
14	Bogra „ 6, '89	Nil	Weather—very dry. Mornings cool; days hot. *Khesari*, peas, linseed, barley, wheat and gram are being harvested, with an outturn of 10 to 12 annas. Jute and *aus* rice are being sown in some places. Rain badly wanted, and both preparation of land and germination of seed retarded. Price of rice steady.
15	Pubna „ 6, '89	Nil	Weather—hot and dry. Outturn of tobacco 8 annas, and of mustard 7 annas. Sugarcane not coming up well, and *boro dhan* suffering for want of rain. Prices of food-grains rising.
16	Darjeeling „ 6, '89	Nil	Weather—hot and sultry. State and prospects of crops fair, but more rain wanted.
17	Julpigoree „ 6, '89	Nil	Weather—hot in day time and cool in the morning. West winds during day. Tobacco is being gathered; outturn estimated at twelve annas. Lands are being prepared for jute. Rain much wanted. Prices stationary.
	Eastern Districts.		
Dacca Divn.			
18	Dacca April 6, '89	Nil	Weather—very hot and cloudy at times. Cultivation of jute and *aus* and *amun* paddy going on slowly for want of rain, and the seeds already sown have not germinated except in low lands. Damage has been done to the crops for want of rain.
19	Furreedpur „ 6, '89	0·56	Weather—hot and dry. Rain is much wanted. Outturn of the *rubbi* crops is below the average—about 8 annas expected.
20	Backergunge „ 6, '89	Nil	Weather—very hot. Ploughing progressing in the *bhil* land for *aus dhan*. Rain is wanted.
21	Mymensingh „ 6, '89	Nil	Weather—somewhat cooler than in the preceding week. There has been rain in parts of the district, though not at head quarters. *Boro* rice is being cut; outturn about 14 annas. Rain is still wanted in many places for sowing of *amun* rice and jute.
	Kishoreganj	1·19	
Chittagong Divn.			
22	Chittagong „ 6, '89	Nil	Weather—hot. Rain is much wanted for the winter crops and for preparing the land for the *aus* crop. State of the winter crops is not good. Lands are being prepared for *aus* paddy. Prices are somewhat high.
23	Noakholly „ 6, '89	N	Weather—warm and sultry. Harvesting of *rubbi* crops nearly finished. Sowing of *aus* continues. Rain wanted.
24	Tipperah „ 6, '89	0·49	Weather—hot and seasonable. Sowing of jute and paddy going on. Eight annas of *aus dhan* and 4 annas of *amun dhan* said to have been sown.
25	Chittagong Hill Tracts. ...		Report not received.
	Hill Tipperah „ 6, '89	Nil	Weather—hot and cloudy with strong wind from the south. *Boro* paddy and chillies not doing well for want of rain. Rain is also much wanted for ploughing. Common rice selling at 18 seers per rupee.

	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.					
PATNA DIVN.	26	Patna	April 6, '89	Nil	Weather—hot with west wind. Harvesting of *rubbi* crops is almost completed; threshing is continuing. Agricultural stock sufficient. Fodder adequate. No marked fluctuations in prices of food-grains. Collection of opium completed.
	27	Gya	„ 6, '89	Nil	Weather—fair and hot. Estimated outturn of linseed 6 annas. Sugarcane planting in progress.
	28	Shahabad	„ 6, '89	Nil	Weather—hot with west wind. No estimate of opium crop received from the Sub-Deputy Opium Agent. Harvesting of *rubbi* crops continues. Sugar-cane being planted. *Cheena* doing well. Prices falling.
	29	Durbhunga	„ 6, '89	Nil	Weather—dry and hot; west winds prevailing. *Rubbi* harvest nearly completed. *Mung, dhan* and indigo being sown, but require moisture. Rain is much wanted. Prices stationary.
	30	Mozufferpur	„ 6, '89	Nil	Weather—hot west winds and dry. No sign of rain. *Cheena* and *mung* suffering from want of rain. Indigo plants damaged by caterpillars. A good shower would improve prospects greatly.
	31	Sarun	„ 6, '89	Nil	Weather—hot and seasonable. West winds prevailing up till the 4th. *Rubbi* nearly all harvested. Considerable damage done to indigo by caterpillars.
	32	Chumparun	„ 6, '89	Nil	Weather—hot in the day; mornings cool. Collection of opium finished, outturn a little less than was expected. *Rubbi* yield from 4 to 12 annas in the Sudder sub-division. Rain wanted for *cheena* on unirrigated land. Prices fairly stationary. Preparation for rice sowing progressing. Indigo suffering from catterpillars.
BHAGULPORE DIVN.	33	Monghyr	„ 6, '89	Nil	Weather—hot and bright. West wind generally prevailing. Harvesting of *rubbi* nearly finished. Indigo sown in the Begooserai sub-division.
	34	Bhagulpur	„ 6, '89	Nil	Weather—seasonable. *Rubbi* harvest drawing to a close; yield of cereals about 10 annas. *Mohwa* crop now secure. Rain would now be beneficial for *dhan* and *mung* sowings in low lands.
	35	Purneah	„ 6, '89	Nil	Weather—hot and dry. *Rubbi* is being harvested. Rice and jute cultivation is in progress. Rain is very much wanted.
	36	Maldah	„ 6, '89	Nil	Weather—seasonable. *Rubbi* harvest going on. An average outturn of 12 annas expected. *Boro* paddy doing fairly, but a shower of rain will do much good to this and to *bhadoi* crops which are being sown.
	37	Sonthal Perghs	„ 6, '89	Nil	Weather—hot west winds. Wheat 12 and 16 annas respectively in Rajmehal and Pakour and 6 annas in Deoghur. *Boro dhan* 16 annas in Rajmehal. *Mohwa* 16 annas, but in Doomka 13 annas. Linseed 20 annas in Pakour.
ORISSA.					
ORISSA DIVN.	38	Cuttack	„ 6, '89	Nil	Weather—mornings cool; days very hot. Ploughing of the *saradh* and *beali* lands has proceeded to the extent on the whole not more than 3 annas throughout the district owing to want of sufficient rain. *Dalua* is being reaped. The estimated outturn of this crop is 10 annas on an average.
	39	Pooree	...		Report not received.
	40	Balasore	„ 5, '89	Nil	Weather—days very hot. Rain much wanted. Harvest of *dalua* rice continues.
CHOTA NAGPORE.					
South-West Frontier Agency.					
CHOTA NAGPORE DIVN.	41	Hazaribagh	April 6, '89	Nil	Weather—seasonable, hot. Mango prospects very poor. *Mohwa* yielding well and prospects very good. Sugarcane promises well. No other crops. Prices stationary.
	42	Lohardugga	„ 6, '89	Nil	Weather—seasonable. No rain, but cloudy at certain places. *Head-quarters sub-division*:—Gram and wheat are doing badly for want of rain. No more fluctuations in the prices of food-grains. *Palamow sub-division*:—*Mohwa* crop damaged by rain, hail and cloudy weather; an outturn of 8 annas is expected. *Rubbi* being reaped; an outturn of about 2 to 3 annas expected. Prices have fallen a little owing to importations from Gya, Lohardugga and Surgoojah.
	43	Singhhoom	„ 6, '89	Nil	Weather—warm. *Rubbi* crops harvested. Outturn 6 to 12 annas. Prices stationary.
	44	Manbhoom	„ 6, '89	Nil	Weather—hot. Wheat, barley, oats and *arhur* are ripening. Outturn of *mohwa* is about 8 annas. Rice selling at from 18 to 21 seers per rupee.

Published for general information.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF MARCH 1889.

THE transition from the cold-weather conditions to those of the hot season in Bengal which usually commences at the close of February, becomes complete in March. The normal features of the meteorology of March are therefore rapidly increasing temperature, gradually decreasing pressure, a general increase in the air motion, winds becoming westerly at the inland stations and south-westerly at the southern stations, while the northerly component in the wind directions almost disappears except in Behar; the air is also generally very dry, skies are clear, and there is an almost complete absence of rain, unless the normal weather conditions are disturbed by the occurrence of the local storms known as nor'-westers. These storms are believed to be brought about by the interaction of the more or less opposing wind systems which obtain to a certain extent over Bengal in this month, for at the western stations, winds are strongly westerly, at the southern stations strong moist southerly winds usually blow, while easterly winds continue to blow down the Assam Valley, and sometimes penetrate as far as Purneah and Durbhunga. From the nature of the formation of these nor'-westers and their local character, the rainfall brought by them, which is sometimes decidedly heavy, is very irregularly distributed. Occasionally also the normal conditions in March are disturbed by the formation of depressions over Northern India, which extend and travel in a south-easterly direction, and give unsettled weather and perhaps rain to Behar, Chutia Nagpur, and North Bengal, but these barometric depressions are usually less numerous and less influential in character than they are in the previous cold-weather months.

By these irregular actions a moderate amount of rain is brought to Bengal during March The normal rainfall is heaviest in East Bengal, where it averages about 2·8 inches. In South-West Bengal, North Bengal, and Orissa the fall ranges from about one to one and a half inches; in Chutia Nagpur it is rather less than an inch; while in Behar it is rather less than half an inch.

Meteorology of the month.—The chief features in the meteorology of March 1889 have been—

1. The mean pressure over the province of Bengal has been decidedly in excess of the normal, the excess averaging about 0·046 inch. This excess, though fairly equally distributed, has been generally largest at the western stations, where at Cuttack, Gya, and Hazaribagh it equals about 0·06 inch; while it has been comparatively small in South-East and South Bengal, where it equals about 0·04 inch. In Assam the mean excess pressure has been 0·045 inch, and here the excess is almost equal at all stations.

2. The average temperature of the whole province of Bengal has been 1·6° in excess of the normal, the largest excess temperatures being confined to the districts of Chutia Nagpur and South Behar In Assam an average excess temperature of 2·2° was registered.

3. Humidity has been decidedly in excess of the normal in all districts, the excess being large in the south-western districts, where it has varied from about 12 to 15 per cent.

4. Cloud proportion has been decidedly larger than usual in Orissa and South-West and East Bengal, but it has been below it in Behar and Chutia Nagpur.

5. A slight disturbance or area of comparative barometric depression was formed at the commencement of the month over Chutia Nagpur and the adjacent districts of the Central Provinces and North-West Provinces. This was the continuation of a shallow depression which had stretched from Upper Sind into the Central Provinces. The depression moved in an easterly direction and gave a series of thunderstorms with general rain in South-West and East Bengal, South Behar, and Chutia Nagpur on the first two or three days of the month, while a few showers fell in North Behar and North Bengal. Slightly disturbed conditions with rain again obtained in the hills and at the stations near them from the 13th to the 20th, and on the 21st and 22nd disturbed conditions existed in Orissa, South-West and East Bengal; but with the exception of these brief periods of disturbance, weather has been fine almost throughout the month. There has therefore been a comparative absence of storms of the two classes mentioned under the normal meteorology of the month.

6 Rainfall for the month has been consequently in decided defect in all districts. The fall in North Bengal has equalled about a tenth of the usual amount; in Orissa, East Bengal, and North Behar it has been about a fifth to a quarter of the usual quantity; in South-West Bengal about one-third; in Chutia Nagpur about one-half; while the largest comparative fall has occurred in South Behar, where it equals about three-fourths of the normal amount. For the whole province of Bengal the average fall is rather less than a third of the normal. In Assam heavy falls have occurred at Sibsagar and Silchar, but very little rain has fallen at Dhubri.

There are, therefore, no particular features in the meteorology of the month which require discussion. Slightly disturbed weather with a number of local storms prevailed in all except the northern districts of the province during the first two or three days. This was followed by period of about a fortnight, during which the hot-weather conditions steadily established themselves, though a few local storms of little or no importance were reported during this interval. Weather then became more disturbed by the passage of a shallow low-pressure area from Central India over North Bengal, and probably also over the hills; and from about the 16th to the 20th local storms were numerous over the north of the province. On the

latter date a brisk fall of pressure caused a feeble depression to appear over North Behar and Bengal, and this was followed by the occurrence of a series of thunderstorms with rain. On the 20th the storms commenced in Chutia Nagpur; during the 24 hours following, storms were reported from the stations along the western portion of South-West Bengal, South Bengal, and Chittagong. Some of these storms were decidedly severe. Thus a rather severe storm occurred about 7-30 p. m. on the 20th at Hazaribagh; at 10-30 p. m. of the same day a severe storm was reported at Ranigunge. A rather large storm passed to the west of Calcutta, moving in a south-earterly direction, at 8 a. m. of the 21st, while beween ten and eleven on the same day Saugor Island was visited by a rather severe storm accompanied by a strong westerly gale, during which wind velocity averaged 44 miles an hour, but which rapidly passed away. It is of course impossible to state with certainty that this was a single storm, but judging by the times at which these stations were visited by storms, it is quite possible that this was a single storm travelling roughly in a south-easterly direction, in which case the velocity of the movement of the body of the storm itself would have been about sixteen miles an hour. These slightly disturbed conditions continued up to about the 23rd, when ordinary hot-weather conditions again set in and continued up to the 27th, when, owing to large barometric changes, a rather deep barometric depression was formed in North Bengal. This was probably only a part of a larger disturbance or stormy weather in Sikkim and the Bhutan Himalayas, and on this day a gale of wind was reported from Darjeeling, but little or no rain accompanied the disturbed conditions at any of the reporting stations. The disturbed conditions, however, which were brought about by this stormy weather, gave rather heavily-clouded skies to many of the stations in the plains for several days, and even up to the close of the month the effects of the disturbance had not entirely disappeared.

Pressure.—The principal abnormal changes in the pressure distribution during the month have already been referred to under the description of the general meteorology. For the whole province the mean pressure has been almost steadily in excess of the normal, the average excess being 0·046 inch. The excess was largest in the first week of March, when it averaged about 0·1 inch to 0·14 inch.

Temperature.—At the commencement of the month temperature was generally somewhat in defect of the normal, the average for the first week showing a mean defect of about 0·6°. During the second week there was an increase in the mean temperature of the province of no less than 4° and temperature thus became decidedly in excess of the normal. A further very rapid increase took place in the third week, and for this period temperature was in excess of the normal by between 3° and 4°, while in Behar the excess was nearly 5°. The excess then commenced to decrease. For the whole month the average mean temperature of the province has been 1·6° in excess of the normal. In Assam the general temperature has been 2·2° in excess of the normal.

The following table will show the principal variations of temperature from the normal, week by week, during the entire month:—

Stations.	Week ending 8th March.			Week ending 15th March.			Week ending 22nd March.			Week ending 29th March.		
	Variation of actual mean maximum temperature of week from normal mean.	Variation of actual mean minimum temperature of week from normal mean.	Variation of actual mean daily temperature of week from normal mean.	Variation of actual mean maximum temperature of week from normal mean. Rainfall.—As stated previously, in no large district has the rainfall of the month been heavy. Average falls of about half an inch have been received in East and South-West Bengal and Chutia Nagpur; of about a third of an inch in South Behar; and of a fifth of an inch in Orissa; while the smallest falls have occurred in North Bengal and North Behar, where they have averaged only a tenth of an inch. Compared with the normals for the period, the actual falls expressed as a percentage become:—South Behar 73, Chutia Nagpore 47, South-West Bengal 35, North Behar 23, East Bengal 20, Orissa 19, and North Bengal 10.

The heaviest falls have occurred in the Noakhally district, which averages 3·29 inches, while in the Darjeeling Hills district an average of 2·62 inches has been received. In all

other districts the falls have been much smaller, and average amounts of between half and one inch are reported in the 24-Pergunnahs, Howrah, Hooghly, Bankoorah, Burdwan, Beerbhoom, Nuddea, Jessore, Khoolna, Chittagong, Backergunge, Shahabad, Loharduggа, and Maubhoom districts. The remaining districts have received falls of less than half an inch, and in the following districts the falls are less than a tenth of an inch:—Pooree, Cuttack, Midnapur, Dacca, Mymensingh, Bogra, Pubna, Rajshahye, Maldah, Dinagepur, Purneah, Mozufferpur, Durbhanga, Chumparun, Monghyr, and Bhagulpur.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of March 1889:—

Meteorological Divisions.	Temperature.						Rainfall.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of March 1889.

	Inches.	Date.	Hour
The mean pressure of the month	29 902		
The average pressure of March from 24 years' registers ...	29·869		
The highest pressure in the month	30·163	5th	10h.
The lowest pressure in the month	29 674	27th	16h.
The range of pressure	0·489		
	Hours		
The total number of hours of bright sunshine during the month	261 7		
The maximum possible number of hours of sunshine ...	371·3		
	°		
The mean temperature of the month	80·2		
The average temperature of March from 24 years' registers ...	80 6		
The highest temperature in the month	98·3	27th.	
The lowest temperature in the month	60 8	6th.	
The range of temperature during the month	37·5		
The mean daily range of temperature	21·9		
The greatest range of temperature in one day	30·7	11th.	
	Per cent.		
The mean humidity of the month	71		
The average humidity of March from 24 years' registers ...	66		
	Inches.		
The mean vapour tension of the month	0·714		
The average vapour tension of March from 9 years' registers ..	0·702		
The mean cloud proportion of the month	2 67		
The average cloud proportion of March from 12 years' registers	2·34		
	Inches.		
The total rainfall of the month	0·92		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	0·89		
The average fall of March from 48 years' registers ...	1·34		
The greatest fall in 24 hours	0·62	24th.	
	Days.		
The number of rainy days in the month	3		
The average number of rainy days in March from 24 years' registers	4		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	146·3		
The mean difference of sun and air temperatures	54·7		
The greatest sun temperature	154·5	9th.	
The greatest excess of sun over air temperature	63·9	9th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	63·6		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	6·5		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	10 8	12th.	
	Miles.		
The mean movement of the wind per day	84·7		
The greatest movement of the wind in one day	160·0	21st.	
The greatest movement of the wind in one hour	15·0	10 to 11 A.M. on the 21st.	
The number of hours with winds from each of the 8 points—			

N. 13, NE. 4, E. 9, SE. 14, S. 122, SW. 326, W. 128, NW. 56, Calm 72.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 1·0° lower; and finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

A. PEDLER,

* Mean of six days. † Mean of five days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

...for the week ending Friday, the 5th of April 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of March. Mean for district.	Since 1st of March. Normal mean.	Since 1st of March. Variation.	Since 15th May 1888. Mean for district.	Since 15th May 1888. Normal mean.	Since 15th May 1888. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station	District.	Meteorological Division.

Explanation.—... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA *the 9th April* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 5TH APRIL 1889.

At the close of the previous week weather conditions were fairly normal, except for the fact that there was a shallow depression overlying North Bengal and Behar which, however, was showing decided signs of filling up and of moving in an easterly direction. On the 30th, or the first day of the present week, pressure fell rather rapidly in the centre and east of the province, and though pressure was relatively low over part of Bengal, the depression had practically disappeared and conditions became fairly normal. On the 31st pressure was rising, and this increase continued over the greater part of the province up to and including the 2nd; but by the morning of the 3rd the pressure commenced again to fall, showing that the highest point of the oscillation had been reached. The fall continued on the 4th, but on the 5th an increase again generally set in. This slow oscillation of pressure is characteristic of fine settled weather; and for the greater part of the week and over the greater part of the province weather has been fine, though in East Bengal at the commencement of the week a few local storms occurred. These local storms were perhaps in some way connected with the slightly disturbed conditions which had previously existed, and which at the commencement of the week were drifting in an easterly direction and filling up in their advance. Both East Bengal and later on Assam thus experienced a few local storms and received some showers, but for the week the greater part of Bengal has been almost absolutely rainless.

Pressure.—The variations of pressure have already been referred to, and for the week the mean pressure of the province has been about 0·02 inch in excess of the normal. This excess pressure has also been fairly equally distributed in the various districts.

Temperature—Has been subject to moderate fluctuations only. Compared with the normal, the mean temperature of the province has been only 1° in excess. In East Bengal, however, a larger excess of 2·2° is registered; while, on the other hand, the temperatures in North and South-West Bengal have been nearly normal. Most districts have reported decidedly high maximum temperatures, and in all except Chutia Nagpur, some stations have recorded temperatures in excess of 100°.

The following table will show the general temperature during the week. It contains the average maximum, minimum, and mean temperatures for the week at nine typical stations in different districts of the province and their variation from the normal :—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 5th April 1889.

	Normal mean maximum temperature for the week ending 5th April.	Actual mean maximum temperature for the week ending 5th April.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 5th April.	Actual mean minimum temperature for the week ending 5th April.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 5th April.	Actual mean daily temperature for the week ending 5th April.	Variation of actual mean from the normal.

Rainfall—During the week has been quite unimportant, and has been entirely confined to East Bengal ; but even here the average fall only equals 0·17 inch The district of Noakhally has received the largest fall, which here equals 0·61 inch. In the districts of Mymensingh and Backergunge average falls of nearly a quarter of an inch have been registered.

The following table gives the summary of the temperature and rainfall data of each of the seven Meterological divisions of the Province for the week ending Friday, the 5th April 1889 :—

Meteorological Divisions.	Temperature						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of March.		Since 15th May 1888.

The total fall from 1st January to 6th April 1889	3·54
The average fall of the corresponding period for 24 years, S. G.'s Office ...	3·11

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, ≡ fog, ⌓ dew.

A. PEDLER,

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

CALCUTTA,
The 9*th April* 1889.

G. A. G. SHAWE,
Under-Secy. to the Govt. of Bengal.

General remarks on the fluctuation of principal staples carried over the East Indian Railway during four weeks ended 23rd February 1889.

INCREASES.

Coal and coke.—There was an increase in both the upwards and downwards traffic, the former was due to requirements by Foreign railways, and the latter to demand in Calcutta for shipment to out-ports and for local consumption.

Cotton.—The increase was principally in despatches from stations above Cawnpore to Howrah and Bombay.

Government stores.—This was chiefly in despatches from Howrah, Chunar and *viâ* Ghaziabad.

Lac.—Due to considerable despatches of lac-stick principally from *viâ* Ghaziabad and *viâ* Jubbulpore to Mirzapore.

Wheat.—The increase was chiefly in traffic from *viâ* Digha Ghât and Moghalsarai to Howrah for shipment.

Stone.—This is in continuation of the increase reported for the last few months.

DECREASES.

Ghee.—There was an increase in weight carried, attended with a decrease in freight earned, due principally to diversion to the Indian Midland Railway route of despatches from Manhor to Bombay, and to a falling off in despatches from other stations on D district to Calcutta.

Piece-goods, European.—The decrease under this head was due to despatches from Howrah and *viâ* Jubbulpore owing to large trade centres in the North-Western Provinces having been overstocked by heavy despatches in December last.

Fruits, other kinds.—Due to poor traffic in betel-nuts.

Rice (husked and unhusked).—The decrease was chiefly in despatches from loop line stations, and was due to absence of demand both in Calcutta and up-country stations.

Gram and pulses.—

Other rain and spring crops.—The decreases under these heads were due to same cause as reported last month, viz., the demand at stations up-country owing to scarcity in 1888, did not exist in 1889.

Hides.—The decrease was principally in despatches from Cawnpore and Delhi, and was apparently due to up-country dealers holding out for better prices.

Oil.—This was almost entirely in despatches of kerosine oil from Howrah, and was due to heavy despatches during the corresponding month of last year.

Opium.—Due to Government arrangements for despatch.

Railway material, Foreign.—This decrease was chiefly in despatches from Calcutta, due to the completion of the Indian Midland Railway.

Salt.—Chiefly in despatches from Howrah owing to heavy speculation in 1888, consequent on the anticipated introduction of an additional import duty.

Seeds.—The decrease was chiefly in linseed and mustard seed; the former decrease was due to exceptional traffic in February 1888 and the absence of demand this year, and the latter was due to the Calcutta market being dull throughout the month.

Spices.—The falling off was principally in despatches of chillies from Mokameh and Mokameh Ghât

Sugar and Jaggree.—Partly due to diversion of traffic to the Indian Midland Railway from Cawnpore and at other stations to absence of demand.

N. ST. L. CARTER, *Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, *the 5th April* 1889.

Nalhati State Railway.

Statement showing Increases and Decreases in tonnage of Staples carried over the Nalhati State Railway during the month of February 1889, as compared with the same month of the previous year.

INCREASE.

	Tons.
Coal	354
This increase is due to greater import of brick-burning coal.	
Grains—	
(5) Others	57
This increase is due to greater import of indigo seeds.	
Railway plant and rolling-stock	113
This increase is due to more materials carried during the month.	
Sugar—	
(1) Drained	12
The increase under this head is due to high market rate.	
(2) Undrained	15
The increase under this head is due to high market rate.	

DECREASE.

	Tons.
Jute—	
(2) Gunny bags and cloths	19
This decrease is due to less export of grains from intermediate stations this year.	
Grains—	
(2) Rice	946
The decrease under this head is due to less export from intermediate stations, as the cultivators are waiting for a better rate.	
Oilseeds—	
(1) Linseed	18
This decrease is due to less export owing to high rate.	
(2) Mustard and rape	209
This decrease is due to dull market.	
(6) Others	89
This decrease is due to dull market.	
Stone and lime	11
This was imported last year for building purposes, but there is no demand this year, hence the decrease.	

The 4th April 1889.

G. BOUGHEY, MAJOR, R.E.,
Offg. Manager, Nalhati State Railway.

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 *and* 25 *Vict., cap.* 67.

THE Council met at the Council Chamber on Saturday, the 6th April, 1889.

Present:

The HON'BLE SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding.*
The HON'BLE SIR CHARLES PAUL, K.C.I.E., *Advocate-General of Bengal.*
The HON'BLE C. P. L. MACAULAY.
The HON'BLE P. NOLAN.
The HON'BLE T. T. ALLEN.
The HON'BLE SIR HENRY HARRISON, KT.
The HON'BLE SIR ALFRED CROFT, K.C.I.E.
The HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.
The HON'BLE C. H. MOORE.
The HON'BLE H. PRATT.
The HON'BLE SHAHZADA MAHOMMED FURROKH SHAH.
The HON'BLE DR. RASH BEHARI GHOSE.

NEW MEMBER.

The Hon'ble MR. NOLAN took his seat in Council.

PRIVATE FISHERIES BILL.

The Hon'ble SIR CHARLES PAUL introduced the Bill "for the protection of the right of fishing in private waters" and moved that it be read in Council. He said:—

"After obtaining leave at the last meeting of the Council to introduce this Bill, it is unnecessary that I should enlarge on the subject, or repeat the reasons which exist for the introduction of the measure. Under the existing law private rights in fisheries are not sufficiently or effectually protected. By the law as it is, any infringement of these private rights is not punishable. Those rights are very valuable; large sums of money are paid for, and great profits arise out of, the exercise of these rights. It is therefore necessary to protect those valuable rights, and it was for that purpose that this Bill has been introduced. The Bill, following the lines of English legislation on the same subject, is directed to three principal points: namely, first, to the offence of fishing in private fisheries; second, to the offence of erecting places and constructing appliances for the purpose of catching fish, without the permission of the owner, in private fisheries; and, thirdly, to make trespass upon these lands for the purpose of committing these depredations a criminal offence. The fifth section of this Bill provides that offences committed under this Act shall be considered cognizable offences, so that the police may arrest offenders then and there. I think this Bill will be found sufficient for the purposes which I originally explained, and under these circumstances I move that it be read in Council."

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble SIR CHARLES PAUL also moved that the Bill be referred to a Select Committee consisting of the Hon'ble Mr. Nolan, the Hon'ble Mr. Allen, the Hon'ble Rajah Rameshwar Sing, the Hon'ble Dr. Rash Behari Ghose, and the Mover.

The Motion was put and agreed to.

POLICE SUPERANNUATION FUNDS BILL.

The Hon'ble SIR HENRY HARRISON introduced the Bill "to consolidate the Calcutta and the Suburban Police Superannuation Funds" and moved that it be read in Council. He said:—

"It is unnecessary, as leave was granted at the last meeting of the Council to introduce the Bill, to say more than that there is a point pending whether any guarantee is necessary for the solvency of the funds, but I understand that upon that question the Local Government is still in correspondence with the Supreme Government, so that there is no necessity to say anything more now."

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble SIR HENRY HARRISON also moved that the Bill be referred to a Select Committee consisting of the Hon'ble Mr. Allen, the Hon'ble Dr. Rash Behari Ghose, and the Mover.

The Motion was put and agreed to.

CALCUTTA PORT BILL.

The Hon'ble SIR HENRY HARRISON introduced the Bill "to consolidate and amend the law relating to the Port of Calcutta and to the appointment of Commissioners for the said Port" and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble SIR HENRY HARRISON also moved that the Bill be referred to a Select Committee consisting of the Hon'ble Mr. Macaulay, the Hon'ble Mr. Allen, the Hon'ble Mr. Moore, the Hon'ble Mr. Pratt, and the Mover.

The Motion was put and agreed to.

EMIGRANTS' SANITATION BILL.

The Hon'ble MR. NOLAN introduced the Bill "to provide for the sanitation of emigrants during their passage through Bengal to the labour districts in Assam" and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble MR. NOLAN also moved that the Bill be referred to a Select Committee consisting of the Hon'ble Mr. Allen, the Hon'ble Mr. Moore, the Hon'ble Dr. Mahendra Lal Sircar, the Hon'ble Dr. Rash Behari Ghose, and the Mover, with permission to report thereon within a fortnight. He said :—

"In explanation of the somewhat unusual provision giving the Select Committee power to report within a fortnight, I desire to state that there is no wish to bind the members to do their work more quickly than they may themselves find convenient; but it seems advisable to give them power to report, if they think fit, before the usual period of one month has expired. There is every reason for expediting the consideration of the measure, so far as can be done without precipitancy; for cholera, which, as His Honour the President informed you when asking leave to introduce this Bill, carried off six hundred emigrants last year, has recently, I much regret to state, broken out again. And it is hoped that no protracted period will be required for the examination of a Bill which merely embodies the simple principle that emigration should be subject to sanitary supervision, and that such supervision should be exercised in accordance with rules to be made by Government, and altered from time to time, so that they may always be in accordance with the varying necessities of the hour. This policy has been accepted without question for a quarter of a century: it was applied by this Council in the Acts of 1865 and 1870 to the special case with which we are now dealing, that of emigration to Assam, and by the Governor-General in Council in three well-known enactments to emigration to the Colonies, Burma and the Straits Settlements. That it was not consciously abandoned by the framers of the present law, Act I of 1882, may be inferred with the utmost certainty from the elaborate provisions made in that enactment, and in the rules framed under it, for the sanitary supervision of the only class of emigrants whom it dealt with; as also from the absence of any intimation in the voluminous correspondence and discussions by which the measure was preceded of a desire to dispense with such supervision. They could hardly have wished to enforce strict rules on a minority, while neglecting the greater number, travelling under precisely the same conditions; and had they intended thus to alter an established policy, they would certainly have given some reason for so doing.

"The explanation of the action taken in 1882, which this Bill intends to supplement rather than to alter, is to be found in the last statement, that the conditions are the same. Emigrants passing through Bengal to Assam are divided into two classes—the minority, who have already executed labour contracts under the Act, and the majority, who have not done so as yet: the health of the former is fully protected by law, and rules having the force of law, while for the latter nothing whatever is done. It was anticipated in 1882 that those who had not signed engagements, being as yet free from any legal bond, would be able to take care of themselves, just like other travellers, and if this expectation has not been fulfilled, the result has to some extent been produced by arrangements not contemplated in 1882—in particular by the facilities afforded to employers for putting labourers under contract as they pass through Dhubri, after leaving Bengal. However this may be, it is now matter of daily experience that emigrants of the two classes are obtained and despatched in the same way, being originally recruited in Chota Nagpur and Behar by planters' sirdars, or the contractors' men, or by *arkatis*, as they are called, working on their own account; being collected in depôts, and there detained until a sufficient number has been got together; being then forwarded in large batches, at their master's expense and under his complete control; and their destination being in both cases to work on tea gardens under statutory contracts. That these contracts are, in regard to one class, executed in Assam at the end of the journey, in

regard to the other, here in Bengal, at its commencement, is a matter quite irrelevant when we are dealing with a question of physical health, and one which cannot properly, I submit, be made the ground for a distinction in the sanitary systems adopted for the two classes. A recruit drinking from a tainted well in an unlicensed depôt may imbibe the seed of cholera, although he has never put his mark to a contract; he may develop the fatal germs and spread them among hundreds, although he is called a free emigrant.

"But whatever the requirements of consistency, no change would be proposed in the law if existing arrangements did not work badly in practice. There have been complaints as to the food furnished to emigrants on their journey, the absence of clothing, the abandonment of the sick, and failure to bury the dead; but it is to the state of the depôts that the greatest importance is attached, and it is in these that the greatest improvement may be reasonably expected. The attention of Government was drawn to this point, by those most interested, in a letter which I might be permitted to read:—

'Dated Calcutta, the 22nd August, 1888.

From—G. M. BARTON, ESQ., Assistant Secretary, Indian Tea Association,
To—The Secretary to the Government of Bengal, General Department.

'I AM directed by the General Committee of this Association to hand you herewith printed copy of a letter, dated the 18th of June, from Surgeon-General A. C. C. De Renzy, C.B., to the Secretary of the Indian Tea Districts Association, London, on the subject of the recent outbreak of cholera among coolies proceeding to Assam.

'It will be noticed that reference is specially made to the state of the depôts and the water-supply at Raniganj, and it is suggested that the Government of Bengal should depute a competent medical officer to report on the state of things at that place and at the halting-places between there and Dhubri, and to advise as to the measures that are required to put them in a good sanitary condition.

'The Committee are aware that the Government is already considering certain suggestions for the sanitary supervision of all coolie traffic to Assam; but they are of opinion that the recommendations of Dr. DeRenzy are worthy of attention, and they therefore beg to bring them to the notice of the Government.'

"The enclosure to the Association's letter begins—

'Dated 18, Clyde Road, Dublin, the 18th June, 1888.

From—SURGEON-GENERAL A. C. C. DERENZY, C.B.,
To—ERNEST TYE, ESQ., Secretary, Indian Tea Districts Association.

'CHOLERA has been so fatal this season among the coolies in transit up the Brahmaputra that the Government, I believe, have found it necessary to suspend coolie emigration altogether. As this step must inflict immense injury on the tea interest in Assam, I venture to suggest that the Indian Tea Districts Association should take the opportunity of pressing on the Bengal Government the necessity of measures for preventing a repetition of such a disaster It ought surely to be fully understood that cholera is the most preventible of all epidemic diseases; and when epidemics, such as have lately prevailed among the coolies occur, it may be assumed with absolute certainty that they are due to gross sanitary neglect somewhere.'

"I may quote another passage from Dr. De Renzy's letter as to the Raniganj depôts:—

'A gentleman who has recently been there describes the state of things as follows. He says:—'It would be a miracle if cholera were not bred at that place. The coolies recruited in the Chota Nagpur districts are collected there in depôts before being despatched by railway. The depôts are under no supervision whatever. Depôts that have space for 100 have frequently 900 crammed into them. The water-supply is from three wells, but is mainly drawn from tanks, which are foul in the extreme. The coolies defæcate anywhere and everywhere a yard from the depôts, and on the margins of the tanks. In fact, it is the Calcutta depôt system of 25 years ago.'

"Previous to the receipt of this communication the Lieutenant-Governor had, through the Commissioner of Police, Calcutta, secured the inspection of the free depôts in this town, with the result that three out of seven were found to be in an unsatisfactory state. The entries in a statement before me as to these three depôts are:—

'The sanitary arrangements of the building are bad, the compound and nearly all parts of the building are in a filthy state, the floors of the rooms are undermined by rats: altogether the place is quite unfit for a coolie depôt.

'This place is also in a very bad state: the supply of water for bathing and other purposes is insufficient, and the building is too small for the number of persons accommodated.

'The building is a pucca two-storied one; the compound is not well kept, and the drain round the building is filthy. The accommodation is insufficient.'

"At the request of the Tea Association, Dr. Gregg, the Officiating Sanitary Commissioner, was deputed to inspect the mofussil depôts. He reported that two out of three free depôts visited by him in Chota Nagpur derived their water-supply from wells, the mouths of which were below the surface level, and which were therefore liable to receive the surface drainage. 'On the whole,' he writes, 'the present free depôts are of the most unsatisfactory kind, and should, I think, be placed as soon as possible under proper management and supervision.' As to Raniganj, he observes:—

'There is no doubt that the sanitary arrangements of the coolie depôts at Raniganj are very defective: the water used in them is drawn in many cases from tanks that are not over-clean; the cooking of the food is not properly attended to; and, in fact, there is an absence of that controlling supervision which has been found to be so necessary in respect of the coolie depôts situated in the Suburbs of Calcutta, in connection with Inland and Colonial Emigration. The depôts belonging to known persons number from 20 to 25, and there are many private depôts besides, in which the so-called free emigrants are accommodated until disposed of by persons whose livelihood depends upon such transactions, and with whom at present there cannot legally be any interference. I also admit that there was a foundation for complaints made by these managers in their turn, that their coolies were not sufficiently provided for on the lines of railway, and I take the opportunity of stating that the Railway authorities and Superintendent of Inland Emigration have recently made arrangements to limit the number of emigrants to be carried daily, so as to prevent overcrowding, to provide suitable carriages, good drinking water, to help the travellers at places suitable for refreshment or repose, and to secure adequate medical inspection and treatment.'

"I hope that in reading these extracts, which I think it my duty to place before the Council, I have not conveyed the impression that there is any very gross or scandalous neglect at these depôts. Dr. Comins, the Superintendent of Inland Emigration, who has just completed an inspection more detailed than had been previously made, informs me that he was rather surprised to find that they were no worse; that since attention has been prominently directed to the subject there has been some improvement; and that the managers seem disposed to act on his advice, though he has at present no legal position in regard to them. He did not, however, find that when care was taken in sanitary matters, it was always exercised according to knowledge; for instance, in one case where a brick drain was made at some expense from a latrine, it was given its outlet in a tank, the water of which is used for drinking purposes by the emigrants. I have also to acknowledge that there was much truth in counter-complaints made by the coolie contractors that the arrangements on railways, over which they had no control, were deficient. This is a matter to which the Lieutenant-Governor has recently given much attention with the result that steps have been taken to prevent overcrowding, to secure the use of suitable carriages, to establish medical inspection on the route, and afford medical assistance, as also to provide for necessary halts, for food and repose. It is well known that coolies when first taken away from their homes are, for reasons easily understood, peculiarly liable to cholera, and, therefore, need special care to guard them against infection, the results of which cannot be prevented by any subsequent treatment. And it is also obvious that as coolies from different depôts are brought together in the train, at Dhubri, and on the Assam steamers, any outbreak of cholera among one batch is likely to spread widely, so that the most careful master may suffer for the neglect of his neighbour. For instance, the depôts for coolies recruited according to the Act are, by all accounts, kept in excellent order under Government supervision, but their inmates can have no exemption from cholera on the journey if they are massed with men coming from an infected depôt. It is the case of the chain-cable no stronger than its weakest part; to provide for the safety of the ship we have to test every link. Such being the circumstances, I hope that this Council, and those interested in the great tea industry, as also the public generally, may accept a Bill which, though it does not purport to deal with the whole question of the supply of labour to Assam, is, I submit, sufficient for its purpose, and can hardly fail to effect an immediate and appreciable improvement in the sanitary condition of the places where cholera is too often generated."

The Motion was put and agreed to.

MOHAMMEDAN BURIAL BOARD'S BILL.

The Hon'ble SIR HENRY HARRISON introduced the Bill "to provide for the appointment of a Mohammedan Burial Board in Calcutta" and moved that it be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The Hon'ble SIR HENRY HARRISON also moved that the Bill be referred to a Select Committee consisting of the Hon'ble Sir Alfred Croft, the Hon'ble Mr. Allen, the Hon'ble Dr. Mahendra Lal Sircar, the Hon'ble Shahzada Mahommed Furrokh Shah, and the Mover. He said:—

"With your Honour's permission, I should like to add that permission to report thereon be given within a fortnight. With reference to the explanation which has fallen from the hon'ble member opposite, I think it would be advisable if leave were given to this Committee also to report in a fortnight if it sees its way to do so. Although the rules which may be framed under the Bill may require a great deal of care and consideration, the Bill itself is of a somewhat simple character, and I think it quite possible for the Select Committee to report within a fortnight; and as it has been represented that the appointment of the Board is urgently required within the present year, it seems desirable to pass the Act as soon as possible."

The Hon'ble the PRESIDENT—"If no one objects, I shall give the permission."

The Motion was put and agreed to.

The Council adjourned to Saturday, the 20th April, 1889.

CALCUTTA;
The 11*th April*, 1889.

C. H. REILY,
Assistant Secretary to the Govt. of Bengal,
Legislative Dept.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 13*th April* 1889.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.		*Western Districts.*		
BURDWAN DIVN.	1	Burdwan April 13, '89	1·01	Weather—hot and dry. Sugarcane outturn 12 annas. The recent rain has had no effect on prices. It will allow of ploughing in places. More rain wanted Only *til* and *boro dhan* on the ground. Their prospects are fair.
	2	Bankoora „ 13, '89	1·44	Weather—cooler since the late showers. Rain has benefited *til* and cotton plants, and has facilitated ploughing for rice sowing. Prices stationary.
	3	Birbhum „ 13, '89	0 03	Weather—rather cooler owing to storms, but the rainfall everywhere has been practically *nil*. No crops to report on. Prices steady. Rain wanted for ploughing.
		Rampur Hât ...	A few drops on 9th.	
	4	Midnapur „ 13, '89	1·17	There has been moderate rain during the last three days. It has done some good to the *boro* crop. Both *boro* and *til* are fair crops, but high wind has damaged the former in places.
	5	Hugli „ 13, '89	1·62	Weather—cool since rainfall. All crops doing well. Rain has done good and enabled ploughing to be done in many places.
		Serampur .	0·45	
		Jehanabad ..	1·00	
		Howrah „ 13, '89	1·18	Weather—cool nights and mornings, hot days; some hail on the 10th. *Boro* harvest begun; a 10-anna crop expected. Some local damage done by hail.
		Central Districts.		
PRESIDENCY DIVN.	6	24-Perghs. April 13, '89	2·24	Weather—very hot. No crops on the ground, except sugarcane which is doing well. Tillage going on. More rain much wanted. Prices of food-grains vary from 14 to 16 seers per rupee.
	7	Nuddea „ 13, '89	0·51	Weather—hot and dry; cloudy towards end of week. No crops in the field now, except sugarcane and indigo which are doing well. The late rain has done much good to lands which are being ploughed for early rice.
		Meherpore ...	2·40	
		Ranaghat ...	0·92	
	8	Khoolna „ 13, '89	0·69	Weather—seasonable. *Boro* and *til* doing well in Bagirhat, but are suffering in Khoolna and Satkhira for want of sufficient rain.
	9	Jessore „ 13, '89	0·77	Weather—hot and dry. The rainfall on the night of the 9th has been beneficial to the cultivation of lands for *aus* and jute. More rain is wanted.
		Magura ...	0·10	
		Narail ...	0·70	
		Bongong ..	0·82	
	10	Moorshedabad „ 14, '89	Nil	Weather—hot and cloudy at times. Lands are being prepared for *aus*; but rain is much wanted.
		Kandi ...	0·10	
		Jangipur ..	0·34	
RAJSHAHYE DIVN.	11	Dinagepur „ 13, '89	Nil	Weather—westerly winds and hot. Jute and *bhadoi* sowings are in progress.
	12	Rajshahye „ 13, '89	0·05	High west winds and much dust. Rain much wanted. Price of rice has risen from 16½ seers to 15½ seers per rupee. Fodder is very dear.
		Nowgong ...	0·03	
	13	Rungpur „ 13, '89	Nil	Weather—cooler than in the previous week. High winds and sky occasionally overcast. *Aus* rice sowings have been completed to the extent of 12 annas. The prolonged drought has prevented the seeds from germinating as well as they should have done; but it also keeps grass and weeds down, and is by no means an unmixed evil. Jute is also backward. Serious apprehensions of a general failure of water-supply are entertained in some quarters, and measures have been taken to re-excavate wells and tanks.
	14	Bogra „ 13, '89	Nil	Weather—hot and dry. Winds variable, sometimes very high. Occasional signs of rain, but only a few drops fell on one day, inappreciable in the gauge. There are scarcely any standing crops. Jute and *aus* rice are being much sown, but rain is very wanted for ploughing and for germination. Coarse rice steady at 21 seers per rupee.
	15	Pubna „ 13, '89	0·05	Weather—cloudy, duststorms. Rain wanted badly for sugarcane, *boro dhan* and *aus* sowings.
	16	Darjeeling „ 13, '89	0·36	Weather—seasonable. Harvesting of *rubbi* crops going on.
	17	Julpigoree „ 13, '89	Nil	Weather—days hot, mornings cool; east wind prevailing. Sowings of jute and paddy going on. Rain is much wanted for winter crops. Prices are somewhat high.
		Eastern Districts.		
DACCA DIVN.	18	Dacca April 13, '89	Not shown.	Weather—very hot, cloudy at times, and windy. Cultivation of jute and rice going on. Sowings are delayed for want of moisture. Damage has also been done to the crops in the field for want of rain.
	19	Furreedpur „ 13, '89	0 33	Weather—cloudy. A little rain on the 10th and 11th, not enough to benefit the crops; more wanted.
	20	Backergunge „ 13, '89	0·52	Weather—very hot. Ploughing for *aus dhan* progressing, but more rain is wanted.
	21	Mymensingh „ 13, '89	Nil	Weather—days hot, nights fairly cool. Harvesting of *boro* rice is nearly over. Rain wanted for other crops.
		Kishoreganj ...	0·19	
CHITTAGONG DIVN.	22	Chittagong „ 16, '89	0·15	Weather—hot. Prospects of winter crops unfavourable. More rain wanted. Lands for *aus* being prepared. Prices stationary.
	23	Noakholly „ 13, '89	Nil	Weather—warm and sultry. Harvesting of *rubbi* crops nearly finished. Sowing of *aus* still continues. Rain wanted. Betelnut and cocoanut flowering.
	24	Tipperah „ 13, '89	0·69	Weather—hot and seasonable. About nine annas of *aus dhan* and six annas of *amun dhan* have been sown. The late rain has done good to the standing crops.
	25	Chittagong Hill Tracts. ...		Report not received.
		Hill Tipperah „ 13, '89	Nil	Weather—hot and dry with occasional clouds. Rain much wanted for ploughing. *Boro* paddy and chillies also suffering from want of rain. Prices stationary.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.				
Patna Divn.				
26	Patna	April 13, '89	Nil	Weather—hot and seasonable. Harvesting of *rubbi* crops has now been completed. Threshing continues. Agricultural stock sufficient. Fodder adequate. In Barh prices of food-grains rising.
27	Gya	„ 13, '89	Nil	Weather—hot. Threshing of *rubbi* crops going on. Sugarcane being irrigated. Weighments of opium in progress.
28	Shahabad	„ 13, '89	Nil	Weather—hot with clouds and slight storms. Sugarcane and *cheena* sown on full area. Harvesting of *rubbi* crops completed; outturn ten annas. Prices of wheat and pulses falling and of rice stationary. No account of opium crop received from Sub-Deputy Opium Agent.
29	Durbhunga	„ 13, '89	A few drops.	Weather—changeable. Easterly winds changed to westerly. *Rubbi* crops gathered; outturn in Tajpur 12 annas, in Durbhanga 10 annas, and in Modhubani 8 annas. Mustard a full crop of 16 annas; linseed 12 annas; rahar 10 annas; wheat 10 annas; opium 16 annas. Rain wanted for indigo and *cheena*. Mango prospects continue good. Prices stationary.
30	Mozufferpur	„ 13, '89	Nil	Weather—hot with west wind. Harvesting of *rubbi* continues. Rain wanted for *cheena*. Indigo has suffered from caterpillars. Linseed outturn estimated at 6 annas in Sitamurhi, 8 to 10 annas in Sudder, and 12 annas in Hajeepur.
31	Sarun	„ 13, '89	Nil	Weather—seasonable Harvesting of *rubbi* almost completed; outturn 12 annas. *Cheena* doing well.
32	Chumparun	„ 13, '89	Nil	Weather—clear and dry; nights still cool. Opium weighments in progress both at Motiharee and Barhurwa Rain wanted for *cheena* on unirrigated lands. Indigo prospects improving.
Bhagulpore Divn.				
33	Monghyr	„ 13, '89	Nil	Weather—hot and dry. *Rubbi* harvest finished; threshing is going on. Indigo coming up well.
34	Bhagulpur	„ 13, '89	Nil	Weather—sultry; signs of rain have cleared off. *Rubbi* harvest closing. *Mohwa* outturn good. Sugarcane and *mung* doing well. Prices steady.
35	Purneah	„ 13, '89	Nil	Weather—seasonable and hot, but very unhealthy owing to want of rain and prevalence of east wind. The *rubbi* crops are being harvested; other agricultural operations are stopped for want of rain.
36	Maldah	„ 13, '89	Nil	Weather—sultry. *Rubbi* harvest almost complete with 12 annas outturn. *Boro* paddy is being watered and doing fairly. Rain is wanted for this crop and for *bhadoi* lands which are being prepared and sown.
37	Sonthal Perghs.	„ 13, '89	Nil	Weather—hot. Wheat 12 to 16 annas in Rajmehal and Pakour and 6 annas in Deoghur. *Boro dhan* about 16 annas in Rajmehal. *Mohwa* 12 to 16 annas.
	Jamtara	...	0·34	
	Pakur	...	0·49	
	Dumka	...	0·59	
ORISSA.				
Orissa Divn.				
38	Cuttack	„ 13, '89	Nil	Weather—mornings cool, but days hot and sultry. Ploughing of *beali* and *sarad* lands proceeded to the extent of 4 annas throughout the district. Rain wanted for further progress. *Dalua* harvested to the extent of 6 annas. The outturn is expected to be 10 annas.
39	Pooree			Report not received.
40	Balasore	„ 12, '89	1·51	Weather—much cooler since the fall of rain on the 9th instant. Rain has improved prospects of crops. More rain wanted. *Dalua* rice is still being reaped.
CHOTA NAGPORE.				
South-West Frontier Agency.				
Chota Nagpore Divn.				
41	Hazaribagh	April 13, '89	0·46	Weather—cloudy and unsettled during the first part of the week; bright, clear and hot for the last two days. Sugarcane doing well. Some slight damage to *mohwa* by cloudy weather; yield expected to be from 12 to 16 annas. Prices stationary.
42	Lohardugga	„ 13, '89	0·47	Weather—cool. Rain with hail almost throughout the head-quarters sub-division *Mohwa* falling—partly damaged by rain, hail and cloudy weather. Mango crop a failure. Prices stationary.
43	Singbhoom	„ 13, '89	1·10	Weather—cool for the time of year. Stormy and threatening during the last three evenings. A storm accompanied with severe hailstorm and followed by showers of rain took place last Wednesday afternoon (10th). Ploughing of rice lands in progress. Outturn of lac will be about 4 annas only, the crop having been injured from want of rain in September and December and by the recent hailstorm.
44	Manbhoom	„ 13, '89	1·2	Weather—cloudy with occasional storms. Wheat and barley about to be harvested; outturn expected to be about 12 annas. Outturn of *mohwa* is about 8 annas, but is much higher in a few places. "Rangin" lac gathering has begun; outturn 8 annas.

Published for general information.

The total fall from 1st January to 13th April 1889	4·70
The average fall of the corresponding period for 24 years, S. G.'s Office ...	3·40

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, p passing temporary showers, t thunder, ꓘ thunderstorm, / strong wind, ⌒ dew.

N.B.—In the weekly report from 24th to 30th March 1889 read 119 and 97 for 199 and 72 miles as the miles recorded on 26th and 30th March 1889 respectively.

A. PEDLER,

For Offg Meteorological Reporter to the Govt. of India.

* Mean of six days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past all stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least undredth of an inch fell.

for the week ending Friday, the 12th of April 1889.

DISTRICT OBSERVATIONS.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	Rainfall. Since 1st of month. he variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater.
enoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal means
years. The means of the district are the numerical average of the rainfall return received in the district, *i.e.*, from total rainfall at the sub-divisional

Statement of Rainfall in Bengal for the week ending Friday (6 p.m.), the 12th of April 1889.

Meteorological division.	District.	Station.	Saturday, 6th April 1889.	Sunday, 7th April.	Monday, 8th April.	Tuesday, 9th April.	Wednesday, 10th April.	Thursday, 11th April.	Friday, 12th April.	Number of rainy days.	Rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 15th May 1888.	Average rainfall from 15th May to date.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 16*th April* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 12TH APRIL 1889.

THE week began with fine weather everywhere, temperature was high, and pressure above the normal. Pressure had been rising, but on the first day of the week a fall set in, at first slowly in the north-west districts, but afterwards more rapidly all over the province. Gradients became steep at the head of the Bay, and strong southerly winds began to blow at the coast stations. On Sunday pressure was considerably below the normal everywhere, but weather continued generally fine, and a few showers fell in the hill districts only. On Monday a few light local showers fell in North Bengal, and though pressure continued to fall, the first signs of an increase were shown in the extreme west of Behar. This rise was general on the following day; the strong current which had been blowing on the coast was consequently checked, and storms began in Chutia Nagpur, South-West and East Bengal. The amount of rain was generally small, and rarely exceeded half an inch. On Wednesday and Thursday, the two following days, these storms continued, and were most general on the latter, following one another after a few hours' interval. While the weather was stormy in these districts, very little rain fell in North Bengal, and it was almost entirely absent from Behar. Temperature fell rapidly during these days, and the mean was, in some cases, largely in defect; but the variations from the mean were necessarily irregular. On Friday there was a general fall of pressure, scarcely any rain fell, and weather generally improved.

Pressure.—At the beginning of the week pressure was in excess, but the fall which then commenced quickly reduced the excess, and on Sunday a defect everywhere existed, amounting in some cases to ·05″. The fall continued for the first three days of the week On Tuesday a rise set in and lasted till Thursday, after which pressure again fell. There was defective pressure only on Sunday and Monday. The mean pressure for the whole week has been everywhere in excess, the largest variation being in Behar and amounting to ·08″. With the exception of the fall on Sunday, and a somewhat rapid rise at a few stations on Tuesday and Wednesday, pressure changes have been generally small.

Temperature.—Temperature was generally high in the early part of the week, but with the commencement of stormy weather large local falls began. On Tuesday and Wednesday several stations reported falls exceeding 7°. At Balasore, on Wednesday, there was a fall of over 10°. Temperature for the week has been in excess in all districts, the largest having been in Behar and North Bengal. The excess for Behar has been a little over 3°; in East Bengal and North Bengal very nearly 3°; in Chutia Nagpur 1·7°; in Orissa 0·6°; and in South-West Bengal 0·9°.

The accompanying table shows the average maximum, minimum and mean temperatures for the week at nine typical stations in the province, as compared with the normal values for the same period:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending Friday, the 12th April 1889.

	Normal mean maximum temperature for the week ending 12th April.	Actual mean maximum temperature for the week ending 12th April.	Variation of actual mean from the normal. Darjeeling	60·4	65 2	+4 8	45 3	49 5	+4 2	52·8	57·4	+4·6

Rainfall.—A few showers fell in North Bengal on Sunday, and thunderstorms with rain were general in Chutia Nagpur and South-West and East Bengal during Tuesday, Wednesday and Thursday. In some cases fairly heavy falls occurred, the largest being 1·5″ at Balasore on Wednesday. Very little rain fell in Behar, North Bengal, and Orissa. In North Behar rain was entirely absent. South-West Bengal and Chutia Nagpur received an average amount of about two-thirds of an inch of rain which is considerably in excess of the normal; in all other districts the amounts are in defect.

The following table gives the summary of the temperature and rainfall data of each of the seven meterological divisions of the Province for the week ending Friday, the 12th April 1889 :—

Meteorological Divisions.	Temperature						Rainfall.

The 15*th April* 1889.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

DURING the week ending 30th March 1889, the returns of the principal Municipalities in Bengal presented the following results :—

1. The ratios per *mille* of births and deaths for the period above referred to stood at—for births 22·5 as opposed to 21·9 during the preceding week ending 23rd March, and for deaths at 24·5 against the same ratio.

2. The following Municipalities registered the highest proportions of births and deaths :—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Burdwan	71·7	Purneah	152·4
Jessore	61·2	Jessore	67·3
Durbhanga	50·4	Burdwan	61·0
Rampore Beauleah	47·3	Naraingaj	49·7
Naraingaj	45·5	Puri	48·3
Monghyr	42·5	Gya	43·0
Bali	38·6	Kishnaghur	30·3
Comillah	30·8		

3. The mortality from the diseases specified below exhibits no noticeable difference in comparison with the mortality of the preceding week :—

	Ratio per *mille* during the weeks ending— 30th March 1889.	23rd March 1889.
Cholera	5·8	5·8
Small-pox	·2	·4
Fever	8·2	8·2
Bowel-complaints	2·9	2·3
Injury	·2	·2
Other causes	7·2	7·6

4. Of the diseases abovenamed, cholera, fever and the maladies coming under the head of "Other causes" proved conspicuously fatal in the following Municipalities, and bowel-complaints only in the Purneah town, where the rate of deaths from this cause stood at 20·8 per 1,000 of population :—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Purneah ...	117·7	Jessore ...	55·1	Gya ...	17·8
Naraingaj ...	24·8	Burdwan ...	35·1	Puri ...	16·8
Puri ...	21·0	Bali ...	24·6	Midnapore ...	15·5
Gya ...	11·6			Burdwan ...	12·2
Rampore Beauleah ...	10·5			Kishnaghur ...	11·4
Suburbs of Calcutta...	7·4			Bhagulpore ...	10·9
Dacca ...	7·1				
Burdwan ...	6·1				
Howrah ...	4·6				
Patna	2·6				

It will be observed that cholera continued to prevail with increased severity in the Purneah town.

5. The mortality according to *Sex, Class* and *Age* stood as follows :—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	27·1	Christians	30·4	Under 1 year ...	174·9
Females	21·6	Hindus	23·9	1 and under 5 years ...	30·8
Ratio of male deaths to every 100 female deaths	142	Mahomedans ...	26·0	5 " 10 " ...	9·9
				10 " 15 " ...	9·5
				15 " 20 " ...	20·9
				20 " 30 " ...	15·0
				30 " 40 " ...	22·3
				40 " 50 " ...	18·2
				50 " 60 " ...	30·6
				60 years and upwards ...	53·0

W. H. GREGG, *Dip. Publ. Health, Camb.,*
Sanitary Commissioner for Bengal.

The 16*th April* 1889.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 30th March 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age-classification.

CONTENTS.

OUTTURN OF CROPS.

THE following papers are published for general information, in continuation of those published at pages 2511—26 of the Supplement to the *Calcutta Gazette* of the 19th December, 1888.

REVENUE DEPT., CALCUTTA; *The* 22*nd April,* 1889.

By order of the Lieut.-Govr. of Bengal,
P. NOLAN,
Secretary to the Govt of Bengal.

Estimated outturn of Rubbee Crops and of important special crops, viz., *Jute, Tobacco, Sugarcane, &c., for the year* 1888-89.

NOTE.

THE present season has been unfavourable to the *rubbee* crops. The sowing was done with difficulty, and in some places over a reduced area on account of the failure of the Hatya rain. In Rajshahye, Bogra, Patna, Gya, and Shahabad the crops were also injured by a hail-storm. As was to be expected under these conditions, a harvest below the average is reported from almost every district; while in Hazaribagh, Singbhoom, Lohardugga, Pooree, Bankoora, Chittagong, and Shahabad the estimated outturn is far below the average. A sixteen-anna crop has been estimated only in the following places, namely, in the subdivisions of Tumlook, Bhuddruck, Uluberia, Sarun, Sewan, Lalbagh, and Jungipore, and in the Rungpore district.

On the whole not more than a ten-anna crop for the entire province may be expected.

2. One of the statements annexed to this note shows the estimated outturn of the most important special crops grown in Bengal, such as sugarcane, potatoes, poppy, ganja, &c. Sugarcane has suffered from a deficiency of rainfall in the Burdwan Division, and in Patna, Chittagong, and Furreedpore; while in Hooghly, Nuddea, and Jessore it was partially destroyed by floods. In Shahabad the outturn is estimated at a little over ten annas, but this is a much better crop than was obtained last year. A bumper crop has been reported from Sarun.

Much damage has been done to the ganja and the poppy crops by hail-storms.

A splendid crop of mulberry is expected in Moorshedabad, but it has not done so well in other places.

Tobacco has done badly in all the important tobacco-growing districts in Bengal excepting the Sudder sub-division of Rungpore, where a full average crop is expected.

M. FINUCANE,
Director of Land Records and Agriculture.

STATEMENT III.—*Estimated Outturn of Rubbee Crops.*

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS MADE IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 19TH APRIL 1889.

TOWARDS the end of the previous week weather conditions had been somewhat disturbed in Bengal, and local storms had been rather numerous. On Friday the 12th, however, conditions appeared to be improving, and the nor'-westers were principally confined to East Bengal. On the 13th, or the first day of the present week, conditions were fairly normal in all districts, and fine weather prevailed generally except at a few stations in Orissa, where local storms with rain were reported. On the 14th, conditions remained practically unchanged, the pressure and temperature changes being small and unimportant. Weather again remained fine over the greater part of the province except in East Bengal, where a few showers were reported. On the morning of Monday, the 15th, again the general barometric changes were small, and pressure was rising by moderate amounts. Temperature on this and the previous day was also decidedly high, and a good many stations reported maximum temperatures of about 100° and upwards. The winds blowing over Bengal on this day, however, were decidedly anomalous in direction. Over the greater part of the interior of the province easterly, and even in some cases north-easterly, winds were reported, while at the southern stations winds were strongly southerly, so that there was a certain amount of interaction going on. That such was the case is also proved by the fact that winds showed considerable variation in directions at many stations from the morning of the 14th to the 15th, and from the 15th to the 16th; and with these variations there was also decided changes in the humidity of the atmosphere. These conditions brought about a series of disturbances in the form of local storms or nor'-westers, which were very general on the 15th over East Bengal and over parts of North and South-West Bengal. Most of these were of little strength and importance, but one of them in the Rajshahye district would appear to have developed into a tornado, probably of small size, which was sufficiently powerful to wreck a train on the Northern Bengal State Railway about 32 miles from Sara, and which also damaged some of the villages near the line of railway. On the 16th conditions remained nearly unaltered, though pressure was slightly low over Bengal, and conditions were fairly normal except for the strong easterly component in the wind directions at many stations in the province. This latter, however, has been a marked feature in the wind directions for the greater part of the week, and as strong southerly winds at the southern stations have been bringing up large quantities of moisture to the province, local storms, some of which were accompanied by heavy rain, have continued to occur, particularly in East and North Bengal, almost up to the close of the week. From the 16th to the 19th the pressure and temperature changes were rather small, and conditions remained practically unchanged. Thus during the week moderately heavy rain has occurred in East Bengal, and light to moderate rain in South-West and North Bengal and Orissa, but elsewhere it has been practically rainless.

Pressure.—The principal variations of pressure during the week have already been referred to. Taking into consideration only those stations which yield reliable normal pressure averages, the mean pressure for the week has been 0·02 inch in excess of the normal.

Temperature—Was very high during the first two or three days of the week over the entire province, but with the occurrence of local storms with rain, temperature was decidedly lower in many districts during the second half of the week. The mean temperature for the whole week has been above the normal by about one degree in Orissa, South-West Bengal, Behar and Chutia Nagpur, while it has been about half a degree below it in East and North Bengal. For the whole province the mean temperature for the week has therefore been above the normal by about half a degree. Many stations have reported maximum temperatures above 100° during the week, the highest recorded being 107·4° at Dehree on the 19th and 107° at Rampore on the 18th instant.

The following table gives the average temperature data for the week at nine typical stations in different districts in the province:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending Friday, the 19th April 1889.

	Normal mean maximum temperature for the week ending 19th April.	Actual mean maximum temperature for the week ending 19th April 1889.	Variation of actual mean from the normal. Darjeeling	63·4	57·9	−5·5	48·6	46·6	−2·0	56·0	51·8	−4·2

Rainfall.—The rainfall which has been brought entirely by local storms or nor'-westers has been very unequally distributed. At some stations these storms have given little or no rain; while at others very heavy falls are reported. Thus on the 16th Meherpur reported no less than 4·50 inches. Falls exceeding two inches within 24 hours have also been recorded during the week at Mymensingh, Netrokona, Alipore Door, and Fallacotta. The heaviest falls have usually occurred in East Bengal, which averages 1·21 inches, or an amount very considerably in excess of the normal. In South-West Bengal and North Bengal the falls have averaged about a third of an inch, and in Orissa about a quarter of an inch. In these three districts the falls have been about normal for the period. In other districts rainfall has been practically absent.

The following table gives the summary of the temperature and rainfall data of each of the seven meterological divisions of the Province for the week ending Friday, the 19th April 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

A. Pedler,

For Offg. Meteorological Reporter to the Govt. of India.

Meteorological Office, Govt. of India;

Calcutta, the 22nd April 1889.

MEMORANDUM.

THE returns of the principal Municipalities in Bengal (excluding Suburbs of Calcutta, which has lately been amalgamated with the Calcutta Municipality), containing a population of 1,071,142, disclose, for the week ending 6th April 1889, the following particulars :—

1. Births and deaths were recorded at the rates, respectively, of 21·3 and 24·6 per 1,000 of population, against 23·5 and 23·4 per 1,000 in the preceding week. There was thus a falling off in the registration of births and an improvement in that of deaths.

2. In the following Municipalities births and deaths were recorded at the highest rates :—

Births.

	Ratio per *mille.*
Bhagulpore	49·8
Rampore Beauleah	44·7
Monghyr	38·0
Comillah	30·8

Deaths.

	Ratio per *mille.*
Purneah	90·0
Puri	56·6
Gya	49·2
Rampore Beauleah	42·0
Burdwan	41·2
Darjiling	39·1
Dacca	35·7
Bali	31·6
Serampore	31·4

3. The following table compares the results of the week ending 6th April with the week ending 30th March. It will be observed that there was an increase of deaths from fever only during the week ending 6th April :—

	Ratio per *mille* during the weeks ending— 6th April 1889.	30th March 1889.
Cholera	5·2	5·4
Small-pox	·3	·2
Fever	9·1	8·0
Bowel-complaints	2·5	2·5
Injury	·3	·2
Other causes	7·2	7·1

4. Of the diseases mentioned in the foregoing table, cholera, fever and the maladies grouped under the head of "Other causes" are reported to have been conspicuously fatal in the following Municipalities :—

Cholera.

	Ratio per *mille.*
Purneah ...	76·2
Puri ...	21·0
Rampore Beauleah ...	13·1
Dacca ...	9·7
Gya ...	9·6
Burdwan ...	7·6
Howrah ...	6·9
Midnapore ...	6·2

Fever.

	Ratio per *mille.*
Gya ...	23·9
Rampore Beauleah ...	23·6
Burdwan	22·9

Other causes.

	Ratio per *mille.*
Serampore ...	21·6
Puri ...	21·0
Bhagulpore ...	19·0
Naraingunj ...	16·5
Gya ...	13·6
Dacca ...	10·4

Cholera, though still high in the Purneah Municipality, was considerably less than in preceding week.

5. The death-rates under the heads of *Sex*, *Class* and *Age* stood as follows :—

According to Sex.

	Ratio per *mille.*
Males	26·1
Females	23·0
Ratio of male deaths to every 100 female deaths	121

According to Class.

	Ratio per *mille.*
Hindus	24·3
Mahomedans ...	26·7
Budhists ...	25·7
Other classes ...	76·8

According to Age.

	Ratio per *mille.*
Under 1 year ...	166·7
1 and under 5 years ...	34·5
5 „ 10 „ ...	14·0
10 „ 15 „ ...	11·3
15 „ 20 „ ...	15·8
20 „ 30 „ ...	15·9
30 „ 40 „ ...	15·6
40 „ 50 „ ...	20·6
50 „ 60 „ ...	25·3
60 years and upwards ...	67·5

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 23rd *April* 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

No. 598*I.A.*

Government of Bengal,

PUBLIC WORKS DEPARTMENT.

IRRIGATION.

Accounts.

Dated Calcutta, the 22nd April 1889.

RESOLUTION.

OFFICERS AND VESSELS EXEMPTED FROM PAYMENT OF CANAL TOLLS.

READ—

Government of Bengal, Public Works Department, Local Communications, Notification No. 249, dated 3rd August 1871.

Government of Bengal, Public Works Department, Irrigation, letter No. 144*I.*, dated 4th February 1874, to the Superintending Engineer, South-Western Circle.

Government of Bengal, Public Works Department, Irrigation, Notification No. 108, dated 3rd August 1880.

Government of Bengal, Public Works Department, letter No. 21T.—*I.*, dated 2nd May 1884, to the Superintending Engineer, Orissa Circle.

Government of Bengal, Public Works Department, Irrigation, letter No. 1837*I.*, dated 6th December 1884, to the Superintending Engineer, South-Western Circle.

Government of Bengal, Public Works Department, Irrigation, letter No. 1130*I.*, dated 18th August 1886, to the Superintending Engineer, South-Western Circle.

Letter No. 445, dated 28th June 1888, from the Commissioner of Orissa.

Letter No. 5053, dated 6th October 1888, from the Superintending Engineer, South-Western Circle.

Letter No. 4857, dated 30th November 1888, from the Superintending Engineer, Sone Circle.

Letter No. 82, dated 5th January 1889, from the Superintending Engineer, South-Western Circle.

Letter No. 1275, dated 28th March 1889, from the Superintending Engineer, Sone Circle.

An examination of the rules which have been issued in connection with the various canal systems shows that they differ greatly as regards the officers who are exempted from the payment of tolls. In future, in supersession of all previous orders on the subject, only the officers and vessels enumerated in the following schedule will be exempted from payment of tolls. These orders will take effect from the 1st May 1889. Any exceptional cases, where exemption appears for special reasons to be desirable or necessary, will be referred by Superintending Engineers for orders of Government:—

SCHEDULE.

Officers exempted from payment of canal tolls.

1. Canal officers, *i.e.*, those directly in charge of Irrigation works, and whose duty will necessitate travelling through the canals for inspection thereof, when on duty.
2. Deputy Revenue Superintendents of Irrigation when on duty.
3. Police officers when on duty.

N. B.—No officer can claim exemption on the mere ground that he is connected, as regards his duties, with any of the abovementioned officers: for instance, a Magistrate and Collector is in the former capacity the superior of the police officer, and in the latter the superior of the Deputy Revenue Superintendent, but this cannot in any way be allowed as qualifying him for exemption.

Vessels.

1. Vessels carrying troops.
2. Vessels owned by the Commissioners of the Port of Calcutta, which may enter the Calcutta canals or Tolly's Nullah either from stress of weather or on business connected with the port, and which do not carry passengers, materials, or goods.

ORDERED—That a copy of this Resolution be forwarded to the Secretary to the Government of Bengal, Judicial Department; Secretary to the Board of Revenue, Lower Provinces; Commissioners of the Orissa, Burdwan, Patna, and Presidency Divisions; Collectors of Cuttack, Midnapore, Patna, Shahabad and Gya; Inspector-General of Police; Superintending Engineers, Orissa, South-Western and Sone Circles; and Examiner, Public Works Accounts, Bengal.

By order of the Lieutenant-Governor of Bengal,

C. W. I. HARRISON, *Lieut.-Col.*, R.E.,
Offg. Joint-Secretary to the Govt. of Bengal,
P. W. Dept.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 20th April 1889.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
	Western Districts.		
BURDWAN DIVN.			
1	Burdwan April 20, '89	0·35	Weather—hot and dry. No crops. Prospects poor while rain holds off. Prices again rising, and now 15 seers for common rice. Sporadic cattle-pox in east of district.
2	Baukoora " 20, '89	Nil	Weather—very hot. Rain is wanted for ploughing. Standing crops are coming on well. Transplantation of sugarcane commenced. Prices have slightly risen.
3	Birbhum " 20, '89	Nil	Great heat, no rain. Practically no crops on the ground. Ploughing has to be deferred for want of rain.
4	Midnapur " 20, '89	Nil	Weather—very hot with occasional light showers. *Boro* is being reaped in places. Slight damage done to this crop by high wind. The recent rain has not been sufficient to allow indigo to be re-sown.
5	Hugli " 20, '89	Nil	Weather—seasonable. Sowings have not commenced yet, but ploughing for early rice general. Sugarcane is being planted.
	Howrah ...	......	Report not received.
	Central Districts.		
PRESIDENCY DIVN.			
6	24-Perghs. April 20, '89	Nil	Weather—abnormally hot, with occasional clouds, and windy. Lands are being tilled for the *aus* crops, but rain is much wanted. Sugarcane is progressing. Prices of food-grains vary from 13 seers 5½ chittacks to 16 seers per rupee.
7	Nuddea " 20, '89	Nil	Weather—hot, but cloudy in the Kooshtea and Meherpur sub-divisions. No crops in the field except indigo and sugarcane, which are doing well. Lands are under cultivation for early rice. Sowing of early rice has commenced in parts of the Meherpur sub-division. More rain urgently needed.
	Kooshtea ...	0·16	
	Meherpur ...	4·50	
	Chooadanga ...	0·45	
8	Khoolna " 20, '89	0·47	Weather—hot with high wind. *Boro* paddy and *til* thriving in Bagirhat, but suffering in other parts of the district for want of sufficient rain. Lands are being ploughed.
9	Jessore " 20, '89	1·85	Weather—very hot and dry. The partial rain has done good, but more wanted. Price of rice rising.
	Jhenidah ...	1·85	
	Magura ..	0·26	
	Narail ...	1·77	
10	Moorshedabad " 20, '89	Nil	Weather—hot and dry. Ploughing going on, but rain needed.
RAJSHAHYE DIVN.			
11	Dinagepur " 20, '89	Nil	Winds easterly. About 2 annas of *bhadoi* and 4 annas of jute sown. Some rain is wanted.
12	Rajshahye " 20, '89	Nil	Weather—very hot. Jute and *boro* paddy being sown. Cultivation going on for paddy. Rice still sells at 15½ seers per rupee.
13	Rungpur " 20, '89	2·82	Weather—unsettled; frequent gales with heavy rain. There has been a pretty general fall of rain, which has greatly benefited the crops. Prospects are now fairly good, and the serious apprehensions produced by the drought are at an end. The rice and jute sowings will now be completed. Some damage has been done in the south by hail. Cattle disease is very rife.
14	Bogra " 20, '89	Nil	Weather—hot days, nights moderately cool. Winds very changeable. Rain often threatens, but never falls. *Aus* rice, jute, and *cheena* are germinating slowly, but rain is urgently needed. Price of rice steady.
15	Pubna " 20, '89	2·21	Weather—cloudy, occasional showers. Rain where fallen has done much good, but is not general. More rain wanted. *Aus* and jute are being sown; the latter to the extent of 2 annas.
16	Darjeeling " 20, '89	1·96	Weather—damp and misty with occasional heavy showers. Hail-storm on 11th at Rangorum did some damage to crops. Spring sowings being vigorously pushed on. So far prospects good.
17	Julpigoree " 20, '89	Nil	Weather—hot during first part of week; latterly cloudy. A little rain on the night of the 19th. More rain wanted. Cultivation of lands for jute and *aus* paddy going on. Prices stationary.
	Eastern Districts.		
DACCA DIVN.			
18	Dacca April 20, '89	1·42	Weather—hot and cloudy with strong wind. Cultivation of jute and *amun* and *aus* paddy going on. Recent rain has done good. *Boro* paddy is being cut. Estimated outturn of mustard and safflower is 10 and 8 annas respectively.
19	Furreedpur " 20, '89	1·78	Weather—hot. Rain fell on three days. More rain wanted. Outturn of *joli* paddy about 8 annas.
20	Backergunge " 20, '89	0·17	Weather—very hot. Ploughing progressing for *aus dhan*, but more rain wanted.
21	Mymensingh " 20, '89	3·34	Weather—hot during the day; cool at night. Harvesting of *boro* rice is still getting on. Sowing of *aus* and jute has commenced.
	Jamalpur ...	0·53	
	Netrokona ...	5·87	
CHITTAGONG DIVN.			
22	Chittagong " 20, '89	0·16	Weather—hot. Rain much wanted. Lands are being prepared for *aus* paddy. State of other miscellaneous crops is not good for want of rain.
23	Noakholly " 20, '89	0·24	Weather—windy and cloudy. Sowing of *aus* crops continues. *Rubbi* crops are being harvested. Betel-nuts and cocoanuts earing. Rain wanted.
24	Tipperah " 20, '89	1·38	Weather—stormy with south wind and occasional rain. The rain has much improved the standing crops and the crops lately sown. Paddy and jute are being sown. It is estimated that 8 annas of *aus dhan* and 4 annas of *amun dhan* have been sown.
25	Chittagong Hill Tracts. ...	......	Report not received.
	Hill Tipperah " 20, '89	2·32	Weather—hot with southerly wind. Copious showers of rain on the 15th and 17th. Lands are being cultivated for *satya* paddy, jute and sugarcane. The rain has done good to the standing crops. Prices stationary.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.					
PATNA DIVN.	26	Patna	April 20, '89	Nil	Weather—hot with west wind. Threshing of *rubbi* crops still continues to a certain extent. Prospects generally favourable, but not good in Behar. Prices of food-grains rising.
	27	Gya	„ 20, '89	Nil	Weather—hot and fair. Threshing of *rubbi* crops going on. Sugarcane is being irrigated. *Cheena* is coming on well. Prices of food-grains rising. Opium weighments in progress throughout the district.
	28	Shahabad	„ 20, '89	Nil	Weather—hot with west wind. *Cheena* and sugarcane doing well. Nothing else on the ground. Prices rising in Sasseram, but stationary elsewhere.
	29	Durbhunga	„ 20, '89	Nil	High easterly winds prevailing. Rain very much wanted for *cheena*, *mung*, and indigo. *Rubbi* harvest finished; threshing going on. Lands being prepared for *bhadoi* cultivation. Prices almost stationary, but tending upwards.
	30	Mozufferpur	„ 20, '89	Nil	Weather—continued hot west winds; no sign of rain. Rain is urgently needed for indigo, *cheena*, and *mung*. *Cheena* has already suffered very badly in the Sitamurhi sub-division, and the outturn will be very small. The *rubbi* harvest is over, the general outturn being good.
	31	Sarun	„ 20, '89	Nil	Weather—seasonable. Harvesting of *rubbi* almost completed; outturn estimated at 12 annas. *Cheena* doing well.
	32	Chumparun	„ 20, '89	Nil	Weather—clear and hot; east wind prevailing. *Rubbi* harvest completed. Opium weighments progressing; yield one-third below estimate. *Cheena* needs rain, especially on uplands; prospects poor. Indigo doing fairly. Prices tend towards a rise. Prospects of mango crop favourable.
BHAGULPORE DIVN.	33	Monghyr	„ 20, '89	Nil	Weather—seasonable. Outturn of *rubbi* 12 annas. Indigo promising.
	34	Bhagulpur	„ 20, '89	Nil	Weather—sultry with occasional strong east wind. Sugarcane doing well. Indigo damaged by grubs. *Mohwa* has given 16 annas outturn. Rain is now desirable for preparation of lands.
	35	Purneah	„ 20, '89	Nil	Weather—very hot; occasional east wind. Rain badly wanted. Very few crops on the ground. Agricultural operations suffering from want of rain.
	36	Maldah	„ 20, '89	Nil	Weather—hot and steamy. *Boro* paddy is still doing well. *Bhadoi* sowings in progress. Damage to these crops is anticipated for want of rain.
	37	Sonthal Perghs.	„ 20, '89	Nil	Weather—very hot. The signs of rain in the early part of the week have disappeared. No food-crops to report on. Indigo doing well. Rain much wanted. Prices high, but stationary.
ORISSA.					
ORISSA DIVN.	38	Cuttack	„ 22, '89	Nil	Ploughing of *beali* and *sarad* lands progressing slowly for want of rain. Price of rice stationary.
	39	Pooree		......	Report not received.
	40	Balasore	„ 19, '89	Nil	Weather—seasonable. Lands being tilled. Sugarcane and cotton doing well. *Dalua* rice still being harvested. Prices rising. More rain wanted in north of district.
CHOTA NAGPORE.					
South-West Frontier Agency.					
CHOTA NAGPORE DIVN.	41	Hazaribagh	April 20, '89	Nil	Weather—seasonable. Very hot with strong west winds. Sugarcane doing well. Rain would improve the prospects of this crop. *Mohwa* has yielded from 12 to 14 annas. Mango has failed. Prices generally stationary.
	42	Lohardugga	„ 20, '89	Nil	Weather—hot. Rain with hail and wind in the interior. Reaping of gram and wheat completed. Prospect of *mohwa* outturn reported to be from 8 to 10 annas. *Karanj* not expected to be a good crop. *Rubbi* crops being threshed in Palamow and sugarcane planted. Prices stationary.
	43	Singbhoom	„ 20, '89	0·09	Weather—seasonable. Sugarcane doing well. *Mohwa* being gathered; 10 annas outturn expected. Prices stationary.
	44	Manbhoom	„ 20, '89	Nil	Weather—intensely hot. No crops on the ground. Rice selling at from 17 to 22 seers the rupee. Price of *mohwa* has fallen to 8 annas a maund.

Published for general information.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least undredth of an inch fell.

for the week ending Friday, the 19th of April 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district.	Of week. Normal mean.	Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1888. Mean for district.	Since 15th May 1888. Normal mean.	Since 15th May 1888. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

'he variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater.
lenoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal means
'ears. The means of the district are the numerical average of the rainfall return received in the district, *i.e.*, from total rainfall at the sub-divisional

Statement of Rainfall in Bengal for the week ending Friday (6 p.m.), the 19th of April 1889.

Meteorological division.	District.	Station.	Rainfall. Saturday, 13th April 1889.	Sunday, 14th April.	Monday, 15th April.	Tuesday, 16th April.	Wednesday, 17th April.	Thursday, 18th April. Explanation.—... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 23*rd April* 1889.

REGISTERED No. 29.

No. 18 of 1889.

SUPPLEMENT TO

The Calcutta Gazette.

WEDNESDAY, MAY 1, 1889.

OFFICIAL PAPERS.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on payment of Six Rupees per annum if delivered in Calcutta, or Twelve Rupees if sent by Post.*

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 *and* 25 *Vic., cap.* 67.

THE Council met at the Council Chamber on Saturday, the 20th April, 1889.

Present:

The HON'BLE SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding.*

The HON'BLE SIR CHARLES PAUL, K.C.I.E., *Advocate-General.*

The HON'BLE P. NOLAN.

The HON'BLE T. T. ALLEN.

The HON'BLE SIR HENRY HARRISON, KT.

The HON'BLE SIR ALFRED CROFT, K.C.I.E.

The HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.

The HON'BLE C. H. MOORE.

The HON'BLE H. PRATT.

The HON'BLE SHAHZADA MAHOMMED FURROKH SHAH.

The HON'BLE DR. RASH BEHARI GHOSE.

The HON'BLE RAJA RAMESHWAR SINGH, BAHADUR.

NEW MEMBER.

The HON'BLE RAJA RAMESHWAR SINGH BAHADUR took his seat in Council.

EMIGRANTS' SANITATION BILL.

The HON'BLE MR. NOLAN presented the report of the Select Committee on the Bill to provide for the sanitation of emigrants during their passage through Bengal to the labour districts in Assam, and moved that the Bill be considered.

The Motion was put and agreed to.

The HON'BLE MR. NOLAN also moved that the Bill be passed.

The HON'BLE MR. MOORE said:—" The main interests affected by this Bill are the interests of those connected with Tea, and I should like quite briefly to give their views about it. Before the Select Committee met, I discussed it with the leading representatives of the Indian Tea Association, and of the Chamber of Commerce to which the Association is affiliated. The purport of the Bill was approved by both bodies, and they had no suggestions to offer for its improvement. Its measure of usefulness will depend upon the rules framed under it, and I trust great care will be taken to confine them to the strict purport of the Bill, and not to go beyond it. In this connexion in Select Committee I proposed the elimination of clause (*j*), section 3 of the Bill, as I considered the wording was so general as to admit of the introduction of the system of way-bills, which would seriously hamper free recruiting by garden sirdars. No restriction would be considered too severe to suppress the various villainies and illegitimate recruiting practised by arkatties, but it is an almost insurmountable difficulty to keep them in check by rules which would not seriously interfere with legitimate free recruiting by garden sirdars, which it is only desired to encourage. On my proposing the elimination of the clause, the legal authority in the Committee showed that there were legal technicalities necessitating its retention, and the mover of the Bill gave me an assurance that there was no intention of imposing the way-bill system. I therefore withdrew my proposal, and I only raise the point now to say it would be satisfactory if that assurance could be repeated here. I have also to ask whether the Government will agree to publish its proposed rules before making them law, to give those interested in Tea an opportunity of expressing an opinion upon them. As both they and the Government have but one object in common, *viz.*, the preservation of labourers from mortality by preventible disease, it seems to me that that course has everything to recommend it, and nothing to the contrary. I would add that, just before coming here to-day, a paper was sent to me by the Tea Association, pointing out that one most essential point was the prevention of overcrowding in railway carriages. The paper consists of two Minutes on the subject by Tea Agency Firms which I will read—

'(1). As regards the supervision and sanitation of free emigrants *en route* to the labour districts, some legislation is undoubtedly wanted, and I think that in this connexion we should call the attention of Government to what I consider to be at present the worst feature of the journey, *viz.*, overcrowding in railways, which in the months of April to June is simply cruel.

'(2). The crowding in the railways is one of the worst features of the coolies' journey, and the railways are allowed to act as if they had absolutely no responsibilities towards emigrants, nor do they seem to be required to make any of the ordinary provisions of accommodation accorded to the third-class passengers either in the trains or at the stations.'

"The point is not specially named in the Bill, but no doubt could and will be brought in under clause (*e*). I have nothing further to say than to express the hope that the Council will pass this Bill, and to thank the Government for their promptitude and decision regarding it from the time it was placed in their hands."

The Hon'ble MR. NOLAN said:—" You, Sir, will have heard, we all heard, with satisfaction the approval of this measure expressed by the hon'ble member who represents among us the views and interests of the mercantile community. Seeing that the immediate consequence of the Bill will be to subject to supervision persons engaged in supplying labour for a great industry, to impose new duties on them, and render them liable to charges, it is most satisfactory to learn, from the hon'ble member's statement, that our proceedings are endorsed by those who would be the first to resist any action of the kind if it were not necessary and beneficial. In regard to what he has said in deprecation of requiring agents to make out way-bills, you, Sir, will be

in a better position than I to give a satisfactory answer as to the future intentions of Government, but I may say that had the requisition of way-bills been contemplated, the Bill would have been differently drafted, so as to indicate that important fact clearly. I doubt if it is really possible to secure the use of way-bills for unregistered emigrants; although, where it is practicable, the system is very useful.

"The support which the measure has received from those most concerned diminishes to some extent the practical importance of an objection taken to it by an experienced journalist that it merely empowers the Lieutenant-Governor to make rules at discretion without clearly defining the character of those rules. It may, perhaps, be convenient to explain, in reply to this observation, that the Bill fixes the responsibility for protecting the health of emigrants on particular persons, it specifies the points on which their conduct shall be subject to control, and assigns a limit to the penalties to be imposed upon them in case of neglect: if it leaves to the Executive the power to specify the actual arrangements to be made on the journey, that is done solely for the sake of convenience. I have a draft of the rules to be issued on the table before me, it was read to the Select Committee, and any portion of it could, had that body so pleased, have been transferred to the Bill. But who would be a gainer by such transfer? Take, for instance, rule 9 of the draft, which runs—

'The agent, or person appointed as aforesaid, must take every care of the emigrants during the journey. He must give them a cooked meal before they start; and if the journey is likely to occupy more than six hours, he must distribute biscuits and sugar in the proportion of two biscuits and one ounce of sugar to each emigrant of and above ten years of age, and one biscuit and half an ounce of sugar to each emigrant under the age of ten years; and if more than eight hours, dry provisions must be supplied, such as *choora*, *sutto*, and the like, in such quantity as may be determined by the Superintendent of Emigration or other authorised officer. It must be seen that the clothing provided is worn by the emigrants whenever the weather renders such a precaution necessary. At the close of every day's march, or of a train journey, the emigrants must be properly housed and provided with a cooked meal and wholesome supply of water for drinking and ablution purposes.'

"That is the regulation now in force under Act I of 1882, and it answers very well as a rule; but who would care to put it on our statute book? In dealing with these details, rules are far more convenient than laws, as they are more easily altered on objection, or when they do not work well. In fact, the procedure of leaving the widest discretion to the Executive is incorporated in the present emigration law, to which our Bill is supplementary, it was adopted in the previous law, and as far as I can ascertain in all the numerous emigration laws and abortive Bills as to emigration which have ever been passed or rejected by the Indian legislature. It also prevails to some extent in regard to arrangements made for the protection of the health of persons who are not emigrants; for instance the hon'ble member opposite, who is Chairman of the Calcutta Municipality, could inform you that here in this town we are all liable to be bound by such sanitary rules as may commend themselves to the body over which he presides.

"The criticism to which I have referred touches a matter of form only, important, no doubt, on general grounds, but having no very special application to the present measure: if we can guard effectually the health of emigrants, it is of no great consequence to them whether this is done by law or by rules having the force of law. But I am aware that the Bill has given rise to a genuine feeling of disappointment among a section of the public by reason of its limited scope: it deals very well, they say, with sanitary matters, but we want very much more than that. In illustration of what I mean, I may, perhaps, quote from a journal published in the recruiting districts: "Though Sir Steuart Bayley correctly describes some, though not all, the evils of that Act, no effort whatsoever has been made in the Bill just introduced to grapple with these evils with a view to their remedy, the only measure contemplated by the Bill being certain sanitary precautions to be observed during the passage of the coolies to the land of slavery. The system of kidnapping which has grown up under Act I of 1882, and to which Sir Steuart Bayley himself in some of his published Resolutions on the administration of the different districts of Bengal made pointed reference, is not even attempted to be touched. The Bill, as at present framed, will not satisfy the public." As far as our Council is concerned, the reply to this objection

is simple and obvious: we have only to state a fact, with which our critics may not be acquainted, to dispose of the matter at once. We have not altered Act I of 1882, because we have not the power to do so: that Act was passed by a superior Legislature, and by that Legislature only can it be amended. We do what we can, as well as we can, and as quickly as we can; for what lies outside our province we can only disclaim responsibility. But in thus indicating the limits of our jurisdiction, I must not be understood to concede that the whole question of emigration and statutory contracts could have been dealt with effectually by any other authority during the present season. The tea industry of Assam has been established by an outlay estimated at fifteen millions sterling: it has settled in that province an immigrant population of 323,000 persons, and 36,000 new recruits leave Bengal every year, attracted solely by the employment which it affords. It has contributed more, perhaps, than any other known factor to the solution of the great problem, how is India to find occupation for a population increasing rapidly? It is thus a most important industry, and, resting as it does on the basis of labour obtained from a great distance, under a peculiar system of statutory contracts, it is an industry of a very special kind. The grounds for action have only recently been established even from the Bengal point of view, and there are others to be consulted—persons who have every right to speak. This is, I submit, a case, if there ever was one, for caution, for deliberation, for the application of the maxim addressed to the ideal English statesman:

'Not quick, or slow to change, but firm,
And in its season bring the law.'

"But, it has been said, we might have expedited matters had we refused to remedy by this Bill immediate and glaring evils until the question could have been dealt with as a whole. As I have read in some journal, we may, by giving an instalment of reform, defer the revision of the whole Act, and thereby do evil; in other words, we should have left the foul wells to do their work a little longer, in order to make the situation intolerable and to bring pressure to bear. This, Mr. President, is, I submit, a suggestion which bears its condemnation stamped in broad characters on its forehead. Even the most cynical controversialist would hardly, on consideration, adopt it with all its consequences: he would scarcely venture to say in plain language to our 36,000 emigrants: "Sicken yourselves again at the contaminated tanks, your illness will help my argument; spread cholera throughout the land, its progress will give point to my declamation; die, and strengthen my case against Act I of 1882." Such a policy can be stated only to be condemned; and its rejection is a sufficient justification for passing the Bill now submitted to the judgment of this Council."

THE HON'BLE THE PRESIDENT said:—"Before I put to the Council the motion which stands on the paper, I wish to add one or two words in reply to my hon'ble friend who first spoke. He desired to know what the intentions of the Government were with regard to the introduction of way-bills under the rules, and, as I understood, he asked for some sort of pledge, as far as it could be given, that they were not to be introduced. The correct answer has been given by the Hon'ble Mr. Nolan in regard to these way-bills, namely, that we cannot introduce them. If I were to speak merely for myself, I might say that the same conditions which required way-bills in the case of coolies who have been registered and are sent up by garden sirdars would equally demand way-bills in the case of coolies who have not been registered and have been sent up by garden sirdars. But the fact of registration makes all the difference. In the one case you have the means of making out a way bill, in the other you have not the means. I mentioned the matter in discussing this question with the member of the Government of India in charge of the case, and we came to the conclusion that way-bills, though admirable in themselves, could not be introduced under this Bill. Therefore, I may say most distinctly and definitely that, as this Bill stands, there is no intention of introducing way-bills. But as to what may be done hereafter I can give no pledge, because, as I have explained, it is my firm hope and trust that this Bill is merely a temporary measure. It is a Bill by means of which we expect to deal with a difficulty which has arisen pending a more complete and better consideration of the question in various aspects which this Council is not in a position to deal with; and whether, when the occasion comes for the amendment of Act I

of 1882, I shall recommend, or whether the Government of India will accept such recommendation as the introduction of way-bills, as in the case of garden sirdars, is a question regarding which it is more than I can give a shadow of a pledge at present. So far on the question of way-bills.

"One other point my hon'ble friend asks above is as to the publication of the rules. It is our object to get the rules into force at the earliest possible moment. Here they are drafted, though not possibly in their final form. I shall ask the Hon'ble Mr. Nolan to submit them informally to-day to those who are chiefly interested, and to ask them to give us their opinions within a week, and I shall delay the publication of them in the meantime, if that will satisfy my hon'ble friend, Mr Moore.

"In regard to the overcrowding of railways, my hon'ble friend on the right (Mr. Nolan) has explained, I think, quite as clearly as I can, what has been done. One of the most serious evils to which objection has been taken is the overcrowding in the railways, and I think it is an objection which is perfectly justified. A Conference was held not very long ago at which the Government in the Sanitary Department and the Managers of the Railways were represented, and certain rules were agreed to. Those rules it is within my power to enforce on the Eastern Bengal Railway, and they will be strictly enforced, and I have no doubt I shall have no difficulty in the matter, and steps have already been taken to introduce them on the East Indian Railway. Although I have no doubt that, under this Bill as drafted, we could pass rules which will have the force of law, and can insist on the management of the East Indian Railway carrying them out, at the same time as they have willingly come forward and agreed to what is required, I shall be unwilling to make any rules on the subject unless I see any real necessity for it. I think I have now answered all the questions which the hon'ble member has asked."

The Motion was put and agreed to.

ADJOURNMENT OF COUNCIL.

THE HON'BLE THE PRESIDENT said:—"There is one word more to say before the Council rises. Of the other Bills which are before the Council, I understand the Select Committee has decided to postpone until the next cold weather the consideration of the Bill to consolidate and amend the law relating to the Port of Calcutta, and to the appointment of Commissioners for the said Port. They do not propose to go on with it at present. There are two Bills on which the reports of the Select Committee are practically ready—the Muhammadan Burial Board's Bill and the Fisheries Bill. With regard to another Bill—the Police Superannuation Bill—there are certain points with regard to which I have to consult with the Government of India before proceeding; but in respect of the two Bills of which the reports are practically ready—the Burial Board's and the Fisheries Bill—I propose that the Select Committee's reports be circulated to members at the earliest possible date. I myself shall not be here on the 4th of May, which is the earliest date on which the Council could receive the reports and consider them. I do not think it is worth asking the Council to meet merely for the sake of receiving the reports. But I propose that the Council shall meet on the 11th, and then take into consideration the reports which you will have by that time had in your hands for more than a week."

The Council adjourned to Saturday, the 11th May, 1889.

C. H. REILY,

Assistant Secretary to the Govt. of Bengal,
Legislative Department.

CALCUTTA;
The 24th April, 1889.

RULES FOR THE REGULATION OF APPOINTMENTS IN THE SECRETARIAT CLERICAL SERVICE OF THE GOVERNMENT OF BENGAL AND ATTACHED OFFICES.

APPOINTMENT DEPARTMENT.

Dated 16*th March* 1889.

RESOLUTION.

READ—

Two notes by Mr. H. H. Risley, dated the 10th May 1888 and the 31st January 1889, on the question of recruiting clerical appointments in the Bengal Secretariat and other offices at the head-quarters of the Government of Bengal by competitive examination, and of extending that system to similar appointments in district offices.

Read again—

Home Department Notification No. 1817, dated 3rd July 1888, publishing rules for the regulation of appointments in the Secretariat Clerical Service of the Government of India and attached offices.

The question of raising the standard of educational attainments required from candidates for clerical appointments in the Bengal Secretariat, and in other offices at the head-quarters of the Government of Bengal, has been under discussion at intervals since 1883, when the Government of India first invited the Government of Bengal to consider whether the rules laid down for the regulation of appointments in the Secretariat Clerical Service of the Government of India and its attached offices might not be made applicable to similar appointments in Bengal. In June 1883 a Committee of Secretaries and Heads of Departments was appointed by Sir Rivers Thompson to enquire into and report upon the subject. This Committee reported that there appeared to them to be no objection to the adoption of the rules, provided—

I—That the scheme should not affect persons then in the offices who were considered fit for promotion from the lower to the upper division.

II—That appointments in the upper division should comprise all those with a salary of Rs. 100 and upwards, instead of Rs. 200 and upwards, as is the case in the Government of India.

III—That a probationer found incompetent need not be retained for a whole year.

IV—That the names of passed candidates should be placed on one general list, and that declining a particular appointment should not entail the removal of a candidate's name.

2. The Committee's proposal to draw up a scheme modifying the Government of India's system in these particulars was generally approved by Sir Rivers Thompson, who appears however to have been of opinion that the number of vacancies available for competition would be very small, and that in order to avoid disappointing the reasonable expectations of successful candidates, it would be as well to provide that, till the passed candidates were absorbed, there should be no necessity for recurring examinations.

3. Correspondence then commenced with the object of collecting statistics in order to ascertain how many appointments would on an average be available for disposal by examination. In the course of this correspondence certain further objections were raised to the rules for the examination, and for regulating promotion from the lower to the upper division of the offices, and it became evident that the difficulties of adopting the Government of India's system, as it then stood, were in some respects greater than the Committee of 1883 had anticipated. For these reasons, Sir Rivers Thompson was compelled to hold in abeyance the scheme for giving immediate effect to the proposals of that Committee, and the papers relating to the subject were sent to the Salaries Commission for consideration in the expectation that their enquiries would enable them to suggest some means of raising the educational standard demanded of clerks in the offices at head-quarters without either injuring the prospects of existing incumbents or disappointing the expectations of candidates who might become eligible for appointments by examination.

4. The views of the Salaries Commission are contained in paragraphs 294 and 295 of their report. The conclusion which they came to differs little from that arrived at by Sir Rivers Thompson three years before. Owing, however, to the many important administrative proposals which were made in their report, the Resolution reviewing it did not appear until the 1st April 1887, and their recommendations regarding the extension of the system of competitive examination were even then not finally disposed of, but were transferred for consideration to the Judicial Department, which was then in correspondence regarding it with the Government of India. The matter was first brought to Sir Steuart Bayley's notice in connection with the larger question of enquiring into, and if possible revising, the working of the Bengal Secretariat, and in referring it to Mr. Risley, the officer appointed in the Judicial Department's Resolution of 17th April 1888, to conduct that enquiry he was instructed to consider the possibility of framing a scheme which should not be open to the objections taken to the system of the Government of India as it stood in 1883. In Mr. Risley's note of the 10th May 1888 the attempt is made to devise a method of filling appointments in the Secretariat by selection based upon the qualifications of the candidates as ascertained and recorded in the examinations held by the Calcutta University. While this proposal was still under the Lieutenant-Governor's consideration, the Government of India published a revised code of rules for examination, and Mr. Risley was therefore directed to examine these and to enquire how far they were applicable to clerical appointments under the Government of Bengal. It appears from Mr. Risley's second note, dated the 31st January 1889, that the rules for regulating appointments in the Secretariats of the Government of India as now amended completely dispose of the objections which have been raised to the extension of the scheme to the Bengal Secretariat and similar offices under the Government of Bengal. The following are the chief points which have to be considered.

5. The principle of breaking up the establishment of a large office into two divisions, and recruiting these divisions separately with reference to the nature of the work with which they are concerned, has been accepted in English public departments for some years past. Although no similar division has as yet been formally introduced into the Bengal Secretariat, the actual practice in dealing with vacancies in the higher grades of the office has all along been based upon the recognition of the fact that in an office recruited mainly by the admission of apprentices a certain proportion of the clerks will only be fit for routine work, and cannot be employed on the more difficult operations connected with the disposal of correspondence. It has at no time been admitted that subordinate appointments in the Secretariat form a sort of service the members of which can claim that vacancies in the upper grades shall be filled exclusively by promotion from the lower grades, and that outsiders shall only be appointed under very exceptional circumstances. So far from this being the case, the rules which have been in force for some years past in the Judicial, Political and Appointment Departments of the Secretariat restrict the promotion of clerks employed on routine duties within very narrow limits, and give a large and indefinite discretion as regards the appointment of outsiders. After carefully considering the effect of the rules promulgated with the Home Department notification already referred to, the Lieutenant-Governor is satisfied that their application to the Secretariat and other offices at head-quarters will not injuriously affect the prospects of the clerks now serving in those offices who were selected under the old system of filling vacancies by the promotion of apprentices or by appointments made without reference to the educational qualifications of the candidates. Clerks now serving in the lower division who can give satisfactory evidence that they possess educational qualifications equivalent to the First Arts standard of one of the Indian Universities will be held eligible for promotion to the upper division, irrespective of the rule restricting the occasions on which such promotions can be made to every alternate vacancy. The substitution of distinct rules for the varying and uncertain practice which now regulates promotion in these offices may further be expected to attract to the clerical service of Government a more highly educated class of men than is secured under the present system.

6. The Lieutenant-Governor agrees with the Committee of 1883 in thinking that, in the case of the Bengal Secretariat, the upper division should comprise

all appointments the pay (or in the case of appointments carrying progressive pay, the minimum pay) of which is Rs. 100 and upwards. It is true that a different line of demarcation is adopted in offices under the Government of India, but it does not appear that this need form a conclusive objection to the Government of Bengal joining in the system of examination now carried on under the orders of the Home Department. It is clearly impossible for the Bengal Government to adopt the line of demarcation recognised by the Government of India without unduly reducing the number of appointments in the upper division, and accepting a lower standard of qualification for work which ought to be reserved for the more highly educated clerks of the upper division. Even if the Government of India were prepared to modify their line of division so as to make it correspond with that adopted by the Government of Bengal, the comparative attractions of the two services would not be equalised thereby for the pay and prospects of clerks employed in the offices under the Government of India are better than those of clerks serving under the Government of Bengal. On the other hand, it seems possible that the knowledge that they will not be required to serve outside their own Province may in some cases induce natives of Bengal to prefer an appointment on smaller pay in Calcutta to one on larger pay with the liability to spend a portion of the year in Simla. In any case it is clear that nothing would be gained by holding a separate examination for Bengal appointments, while that arrangement would certainly involve an amount of expenditure disproportionate to the object in view.

7. It has already been stated that the Government of India's rules as now amended render it possible to do ample justice to clerks already serving in the lower division. The question whether in any particular office it is possible in practice to fill every alternate vacancy by promotion from the lower division is one which will have to be carefully considered in each case with reference to the educational qualifications and proved ability of the clerks concerned. These considerations have hitherto been invariably taken into account in deciding whether a particular vacancy was to be filled by promotion within the office or by the appointment of an outsider, and it does not follow that the introduction of the new rules will make it possible to dispense with precautions which are peculiarly necessary where the lower division has been recruited mainly by the admission of apprentices. In the case of the Secretariat it seems to the Lieutenant-Governor that no clerk should be promoted from the lower to the upper division unless he is fully qualified to deal with the higher branches of correspondence work. To this latter proviso an exception may be made in favour of clerks working in the Reference Branch, as it is desirable to hold out special encouragement to proficiency in this important branch of office business.

8. As regards offices other than the Secretariat, it seems to the Lieutenant-Governor that the amended rules equally meet the objections raised by the Board in their letter No. 782A, dated 4th September 1884, to the extension of the Government of India's system to their office. The present system, in fact, differs in many material particulars from the scheme to which the Board then took exception, and leaves them in some respects a wider discretion as regards the appointment of outsiders than they proposed in that letter to reserve to themselves. A point to be specially noticed is that the rules, as they now stand, render it possible to maintain the existing system of apprentices on a somewhat reduced scale, and thus avoid the main difficulty on which the Board laid stress. The allotment of every third vacancy to registered apprentices would make it easy to absorb the existing apprentices within a reasonable time, while by rendering their prospects more certain it would probably induce men of higher qualifications to enter as apprentices. It may be added that the rules also allow heads of offices to appoint, otherwise than by competition, domiciled European and Eurasian clerks—an element which should not be allowed to disappear entirely from the public offices. The proviso requiring a minimum qualification of the Entrance Examination for the lower and the First Arts for the upper division ought not to exclude these men, while the knowledge that a substantial proportion of appointments are withdrawn from competition and reserved for distribution among persons who can show a certain minimum educational qualification may probably encourage them to pay more attention to the education of their sons than they have hitherto done. The rules might also be used to bring

in experts or specialists, such as are referred to in the last paragraph of the Salaries Commission's Report, and to secure that a certain proportion of appointments should fall to Mahomedans.

9. For these and other reasons, which need not be discussed here, Mr. Risley recommends that the system of modified competition as set forth in the Government of India's rules be extended to the offices of Commissioners, Magistrate-Collectors, and District Judges throughout Bengal, certain subjects being added to the examination in order to meet the requirements of these offices. Sir Steuart Bayley is not at present prepared to make so large a change in the arrangements of Collectors' and Judges' offices as this proposal would involve, but he sees no reason why clerical appointments in the offices of Divisional Commissioners in Bengal Proper should not in future be dealt with in accordance with the rules. In these, and perhaps in some of the other offices enumerated, it may be found necessary to lower the line of demarcation between the uper and lower divisions from Rs. 100 to Rs. 80, or perhaps less, so as to secure a convenient proportion of appointments in each division, and some provision may perhaps have to be made for testing proficiency in the vernacular. These points will be separately considered hereafter.

10. The rules which have been framed for the purpose of giving effect to the changes explained above are annexed to this Resolution.* It is proposed to ask the Government of India to permit candidates for clerical appointments under the Government of Bengal to present themselves at the annual examination now held under the orders of the Home Department of the Government of India. The rules published with the Home Department notification of the 3rd July 1888 have therefore been adopted with such modifications only as were necessary in order to adapt them to the administrative arrangements of the Government of Bengal. The offices to which the rules will apply are the following:—

Bengal Secretariat.
Board of Revenue.
Commissioners of Divisions in Bengal Proper.
Inspector-General of Jails
Inspector-General of Police.
Director of Public Instruction
Director of Land Records and Agriculture.
Inspector-General of Registration.
Inspector-General of Civil Hospitals.
Sanitary Commissioner.
Superintending Engineer.
Inspector of Local Works.
Superintendent of Emigration and Protector of Emigrants.
Conservator of Forests.
Collector of Customs.
Superintendent of Stamps and Stationery.
Collector of Calcutta.
Magistrate-Collector of 24-Pergunnahs.
Magistrate of Howrah.

11. The heads of these offices should now report the number of appointments they have in each division, the number of vacancies now existing, and the number likely to be available for competition in January 1890. As regards existing vacancies, it may be a question whether an attempt should not be made to provide employment for qualified candidates whose names are still standing on the list, and the Government of India will be asked for information as to the results of the recent examination, and the number of candidates remaining over from previous examinations who may be willing to take appointments under the Government of Bengal.

* Vide Part I of this Gazette.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Chief Secretary to the Government of Bengal.

SCHEME FOR RECRUITING THE SUBORDINATE EXECUTIVE SERVICE.

APPOINTMENT DEPARTMENT.

Calcutta, the 24th April 1889.

RESOLUTION.

READ—

Resolution on the appointment of candidates to the Subordinate Executive Service, No. 702, dated 24th February 1868.

Resolution on the same subject, No. 2288, dated 2nd June 1868.

Notification, dated the 26th September 1871, publishing rules for the examination of candidates for the Subordinate Executive Service, the Police and the Opium Departments.

Notification, dated the 3rd October 1871, amending the above rules.

Resolution, dated 20th March 1872, creating executive establishments for sub-divisions.

Notification of 9th July 1872, publishing rules for the examination of candidates for civil appointments.

Notification, dated the 23rd July 1872, regarding the appointment of candidates to the Subordinate Executive Service.

Letter No. 858, dated 5th August 1872, explaining the rules relating to the Civil Service classes and the examination of candidates for civil appointments.

Resolution, dated 15th April 1873, publishing lists of candidates passed at the Native Civil Service examination.

Resolution, dated 22nd April 1873, on the subject of sub-divisional executive establishments.

Letter to Director of Public Instruction, dated 10th October 1873, forwarding revised rules for the Native Civil Service examinations of 1875.

Resolution of 22nd June 1875, reviewing the results of the Native Civil Service examination, of that year.

Minute by Sir Richard Temple, dated 25th September 1875, on competitive examination for admission of candidates to the Native Civil Service of Bengal.

Notification, dated 23rd September 1875, publishing revised rules for Native Civil Service examination of 1876.

Resolution, dated 17th June 1876, reviewing the results of the Native Civil Service examination of that year.

Notification, dated 21st November 1876, of a competitive examination to be held in March 1877.

Resolution, dated 14th December 1876, exempting certain officers from the Native Civil Service examination.

Memorandum No 5176A, dated 3rd November 1877, ordering the discontinuance of the Native Civil Service examination.

Resolution, dated 23rd February 1883, on the system of recruiting the Subordinate Executive Service.

Resolution, dated 30th April 1883, modifying the Resolution of 23rd February, and publishing the subjects of examination.

Resolution, dated 20th June 1883, modifying the Resolution of 23rd February 1883.

Resolution, dated 6th September 1883, modifying the Resolution of 23rd February 1883.

Notification, dated 18th December 1883, regarding the examination for the Subordinate Executive Service.

Resolution, dated 17th March 1884, reviewing the results of the examination held in that year.

Resolution, dated 21st April 1884, modifying the Resolution of 23rd February 1883.

Resolution, dated 3rd February 1885, postponing the complete introduction of the system of appointment by competition to the Subordinate Executive Service.

Resolution, dated 23rd March 1885, reviewing the results of the examination held in that year.

Resolution, dated 12th June 1885, regarding examination for the Subordinate Executive Service.

Resolution, dated 16th March 1886, reviewing the results of the examination held in that year.

Resolution, dated 19th March 1887, reviewing the results of the examination held in that year.

It is now nearly twenty-three years since the attention of the Government of Bengal was first drawn to the anomaly that while Covenanted Civilians were required before entering on their duties to pass a number of examinations expressly designed to fit them for their work, Deputy Magistrates and Deputy

Collectors were permitted to commence their actual service without undergoing any test of their intellectual qualifications for employment under Government. During that period the question of the best means of recruiting the Subordinate Executive Service has been constantly under consideration, and the long series of orders quoted in the preamble to this Resolution is of itself sufficient to show that serious difficulties have been encountered in dealing with it. These difficulties seem to have arisen rather from the nature of the subject than from any difference of opinion as to the main object to be kept in view. The general policy followed by successive Lieutenant-Governors has been on the whole the same, although frequent changes have been made in the system by which that policy was to be carried into effect. These changes have produced inconvenient and embarrassing results. Claims created or recognized by one method of selecting candidates were ignored or imperfectly satisfied when another method was introduced, and each system in turn has involved the Government in a number of implied pledges which it is now practically impossible to fulfil. It has become necessary therefore to examine the whole subject in detail, to review the history of its past administration, and to endeavour to devise some means of reconciling an indefinitely large number of conflicting claims to employment in the Subordinate Executive Service with the hard fact that only a limited number of appointments can possibly fall vacant every year, and that the *cadre* of the service cannot be materially increased.

2. In 1868 Sir William Grey resolved as an experimental measure to appoint candidates to the Subordinate Executive Service on a combined plan of nomination and competition. Three nominations were made by the Lieutenant-Governor for every appointment that was expected to be available, and the final selection from among the nominees was determined by competitive examination. The object of the examination was to test the general education and the intelligence of the candidates, and also their knowledge of English and of one of the chief vernacular languages of these provinces. All candidates were therefore required to write an English essay and to answer questions on general subjects; natives of India had also to write a vernacular essay and Europeans to translate papers from and into one of the vernacular languages. The first examination was held on the 26th of May 1868. Sixty-nine persons were allowed to appear, and twelve European and eighteen native candidates were selected as eligible for appointments in the Subordinate Executive Service. Nearly three years, however, elapsed before all of these gentlemen had been actually provided with appointments, and for this reason no more examinations were held during Sir William Grey's tenure of office.

3. In 1871 a fresh set of rules, providing for the examination of candidates for the Subordinate Executive Service in law, surveying, engineering, and the vernacular languages, was drawn up under Sir George Campbell's orders, and published in the *Calcutta Gazette*. The examination was open only to persons employed in one of the Civil Departments of the Government service, but the term of employment necessary to qualify for admission varied according to the University attainments of the candidate, so that a candidate who had passed only the Entrance examination must have been five years in Government service, while a graduate in Arts, Law or Engineering was admissible if he had held a permanent appointment for one year. The examination was not competitive. Every candidate who passed in the first and second classes received a certificate, stating that he had passed in certain subjects and that he was qualified for an appointment in the Subordinate Executive Service. The first edition of the rules (notification of 26th September 1871) contained a note to the effect that this certificate would give no claim to an appointment. It was stated, however, in the resolution of 20th March 1872, creating Sub-Deputies and canoongoes, that capable young men admitted into these lower grades of the Native Civil Service "would in course of time become fit for Deputy Magistracies and higher appointments, which appointments will ordinarily be made from among those who have done well as Sub-Deputies." On the 23rd June 1872 it was notified "for the encouragement of candidates for the Native Civil Service" that arrangements had been made for employing in the public service all the candidates who passed the examination of February 1872, and it was added that qualified candidates accepting appointments of less than Rs. 100 per mensem would be

eligible for promotion to the higher grades on showing their practical efficiency by good service. This assurance was repeated in the Resolution of 15th April 1873, in which qualified candidates were "recommended to accept lower grade appointments and to try to work themselves up." Finally, in the revised rules drawn up in 1873 and intended to come into force after the examination of 1874, it was laid down that "all appointments in the Subordinate Executive Service, and all posts of Rs. 50 monthly salary and upwards in the sub-divisional establishments, both in Regulation and Non-Regulation Provinces, will ordinarily be reserved for persons who pass the Native Civil Service examination."

4. The results of holding pass examinations open to all comers soon became apparent. The examinations of 1872, 1873 and 1874 had rendered 361 men eligible for appointments. Just at that time a lower branch of the Subordinate Executive Service was created in order to provide a general executive agency for sub-divisions, and appointments in this branch were made available for almost all those who had passed the examinations of 1872 and 1873. At the same time the operations undertaken for the relief of the famine of 1874 rendered it possible to give temporary employment to a number of the passed candidates of that year. But in spite of this very exceptional demand for subordinate executive officials, the number of candidates still unprovided with appointments was even then greatly in excess of the ordinary requirements of the service. In 1875 the standard of examination was raised, and the number of candidates who passed on that occasion was thereby greatly reduced. But there remained, as is stated in the Resolution of 22nd June 1875, no fewer than 80 passed candidates qualified for the higher grade and 120 qualified for the lower grade, for whom there was little prospect of appointments becoming available. It was therefore decided that no general examination would be held until further notice.

5. In his minute of the 25th September 1875, Sir Richard Temple reviewed the working of the system introduced by his predecessor. He pointed out that to pass all the candidates who attained a given standard must necessarily bring on the hands of Government a larger number of passed candidates than could conveniently be provided for, and that in fact about 155 candidates then remained unemployed. He directed, therefore, that instead of all candidates being passed who came up to a certain standard, the examination should in future be competitive, and that a fixed number of places in the higher and the lower classes of appointments should be allotted to the candidates who stood highest at the examination. It was further laid down that no candidate would be passed for the higher grade of appointments unless he obtained two-thirds, or for the lower grade unless he obtained one-half of the total number of marks. This change, while successfully preventing any large increase in the number of passed candidates from taking place in the future, did nothing to improve the prospects of the men who had passed in the first three years of Sir George Campbell's term of office.

6. Sir Ashley Eden introduced a complete change of policy. He held that competitive examination had proved a failure as a method of recruiting the Subordinate Executive Service, and he substituted for it a system of nomination, in which regard was had to the social position, moral character and educational attainments of candidates for appointments. The names of eligible candidates were entered in two registers—one for Deputy Magistrates, and another for Sub-Deputies; and when vacancies occurred, a selection was made from among the names on these lists. This mode of nomination was adhered to throughout Sir Ashley Eden's time.

7. In 1883, when the subject first came under Sir Rivers Thompson's consideration, both of the lists in question contained a large number of names, some of which had been on the registers for many years. In many cases, however, the information regarding the qualifications of the candidates was not full enough to enable a satisfactory selection to be made, and it was mainly for this reason that Sir Rivers Thompson determined to gradually introduce a system under which appointments to the Subordinate Executive Service should again be thrown open to competition. In order to satisfy the claims of those nominees who were still waiting their turn for appointments, it was arranged that all vacancies during 1883 were to be filled by candidates

borne on the Government lists. In 1884, nominees who had not succeeded in getting appointments were, together with those Sub-Deputy Collectors who had passed the Native Civil Service examination or the Entrance examination of the Calcutta University, permitted to compete for the appointments that fell vacant in that year, and were relieved from the restriction* excluding persons who are more than twenty-five years of age. In 1885 eight appointments were given by nomination and twelve by examination; in 1886 ten by examination, while in 1887 nine men were nominated and five admitted by examination.

8. Notwithstanding the attempts thus made by successive Lieutenant-Governors to organise the recruitment of the Subordinate Executive Service on a permanent footing, Sir Steuart Bayley is compelled to express a doubt whether the question has yet been finally disposed of. Several radical changes of system and various temporary expedients have been tried and found wanting. Each change has given rise to a fresh set of claims, and has thereby enhanced the difficulty of satisfying the claims already on record. The registers of candidates for appointments in both branches of the Subordinate Executive Service are overloaded with names; some few promises of appointments have been given; many vague expectations of obtaining appointments have been formed and to some extent recognised; and distinct conditional pledges of promotion for good service have been only imperfectly fulfilled. These causes, operating concurrently during a period of twelve years, have produced a state of such extreme complication and confusion that the Lieutenant-Governor is satisfied of the necessity of introducing some comprehensive scheme which shall take account of the essential and permanent requirements of these provinces, and shall provide for giving play to more than one method of selection.

9. In any scheme that is to be final, the principle of competition must occupy a prominent, perhaps the most prominent, place. But competition alone will not meet all our wants. We have to consider the diverse character of the population with which we are dealing, and to guard against a single race or class obtaining a virtual monopoly of the service by which a large proportion of the every-day work of administration is done. At the present time, and probably for many years to come, the immediate effect of recruiting the Subordinate Executive Service on an exclusively competitive basis would be to debar Mahomedans, natives of Behar, and natives of Orissa from any reasonable chance of obtaining appointments. Not only would this be unfair in itself and contrary to established policy, but it would tend to encourage feelings of race jealousy and antagonism, which have already begun to show themselves, and which might at any time give rise to serious difficulties. It is as true now as it was when Sir Richard Temple wrote his Minute of the 22nd September 1875, that "there may be many good reasons, besides the winning of a place in an examination, for appointing native gentlemen to the higher grades in the public service." Social or representative position, family connexions, distinguished University attainments, meritorious service in other branches of the administration—these are some of the qualifications which may give a claim to appointments by nomination. There remains also a third class of claimants comprising those Sub-Deputy Collectors who passed the Native Civil Service Examination in the years 1872-75, and who have earned by distinguished service in the lower branch the fulfilment of the promise of promotion to the upper which was given by Sir George Campbell.

10. Having thus defined generally the main classes of claims which have to be taken account of, it is now necessary to examine the question more minutely, and to classify the claims on record with reference to their comparative validity and the reasonable prospects of being able to satisfy them. Taking the latter point first, it should be explained that the Subordinate Executive Service is divided into two branches—an upper and a lower. The former is at present composed of 242 Deputy Collectors, 35 probationary or officiating Deputy Collectors, and 29 Special Deputy Collectors. In the latter there are 94 Sub-Deputy Collectors, 14 special and temporary officers, 8 tehsildars, and 67 canoongoes. The pay of a Deputy Collector of the lowest grade is Rs. 250 monthly. The pay of probationary or officiating Deputy Collectors is Rs. 200 monthly: that of Special Deputy Collectors varies from

Rs. 200 to Rs. 400. The pay of the highest grade Sub-Deputy Collector is Rs. 200: that of the lowest Rs. 100. The pay of tehsildars is Rs. 200, and the pay of first-grade canoongoes Rs. 75 monthly. The number of officiating or probationary officers varies from time to time. It is thus obtained. A table is periodically compiled showing the number of Deputy Collectors absent on leave, deputation, &c. From the total of this the number of officers likely to rejoin or revert at an early date, and the number actually officiating, are subtracted, and the balance is taken as the number of officiating vacancies to which selected candidates may be appointed on probation with a reasonable probability that none will be thrown out unless by their own fault. They are then required to pass the departmental standard examinations, after which they become eligible for confirmation when a temporary vacancy occurs in the seventh grade of Deputy Collectors. Special Deputy Collectors are appointed for specific temporary work, and so long as they are employed on such work, are not brought on the regular list without being seconded. As a rule, Special Deputy Collectors are chosen from among the grades of Sub-Deputy Collectors, so that in the event of a man's special work coming to an end before he obtains an appointment in the regular line, he may have something to fall back upon. Although the work done by Special Deputy Collectors is in theory of a temporary character, the experience of the last few years seems to show that there is enough of it to furnish continuous employment to a certain number of officers; while the development of special branches of administration, such as excise, income-tax, and irrigation, may tend to increase that number. The question therefore arises whether the *cadre* of Deputy Collectors should not be increased so as to admit of the inclusion in the regular line of those Special Deputy Collectors whose duties, though in theory terminable, are for various reasons practically permanent. In order to determine this point, careful enquiries will have to be made by the administrative departments concerned in each case. Some excise appointments may probably be treated as permanent, and it is possible that certain of the Special Deputy Collectors employed in making partitions may be incorporated in the regular *cadre*. This question will be considered in the Revenue and Financial Departments.

11. Such being the constitution of the Subordinate Executive Service, and the possibility of adding to the number of available appointments being limited, partly by the restriction of a definite *cadre*, and partly by occasional administrative requirements, the next point to consider is what claims to appointments in this service are now on record, and what prospects may reasonably be looked forward to of satisfying them in whole or in part. Commencing with men already in the lower branch of the service, there are among the grades of Sub-Deputy Collectors no less than 42 men who passed the higher grade of the Native Civil Service examination, and are entitled to the benefit of the pledge given by Sir George Campbell that such officers, if they did good service as Sub-Deputies, would be promoted to the superior branch of the service. The list of candidates for appointment by nomination to the upper branch of the service shows 84 names, many of which have been on record for several years. In dealing with numbers so utterly out of proportion to the possible vacancies that may be anticipated, it is obvious that some very stringent and searching method of selection has to be resorted to. Unless the lists can be very materially reduced, the claims of the next generation of candidates will be brought forward before those of the present generation have been disposed of. Following this principle, the Lieutenant-Governor has after the most careful consideration selected from among the list of Sub-Deputy Collectors who passed the Native Civil Service examination, twenty-two officers whose claims to promotion to the superior branch have been placed on record in the Secretariat, and will be dealt with in order; those who are special Deputy Collectors being promoted as occasion may offer to be probationary or officiating Deputy Collectors, and being seconded by Sub-Deputy Collectors whose claims have similarly been recognised.

12. The list of candidates for appointment by nomination presents far more serious difficulties. The practice in dealing with applications seems to have varied from time to time, and no attempt appears to have been made to restrict the number of names registered with reference to the number of appointments likely to be available within a reasonable time. Careful scrutiny

of the papers of each individual case has, however, enabled the Lieutenant-Governor to distinguish two classes of candidates—those to whom specific promises of appointments have been made by his predecessors, and those who, though holding no specific promises, have nevertheless indisputable claims upon Government in virtue of University distinctions, of good work done in other departments, of their social or representative position, and of important services rendered by members of their family to the Government, and have been given to understand that these claims have in some measure been recognised. From among those there have been selected for appointment this year, should vacancies permit, the names of six gentlemen, three of whom appear to have received assurances of a more or less definite character approaching to specific promises, while the other three have independent claims of a high order to the special consideration of Government.

13. The number of vacancies that may be looked for in the Subordinate Executive Service during the year 1889 is still uncertain. The average number of vacancies arising from ordinary causes may be taken at eight, and it is probable that four appointments will be added to the regular *cadre* of Deputy Collectors in order to provide for the increased administrative requirements of the Excise Department. There will thus be twelve vacancies available in the course of the year. In the event of these expectations being realised, the Lieutenant-Governor proposes to allot six appointments, or every other vacancy that occurs, to those Special Deputy Collectors whose names have been recorded in the manner described in paragraph 11 above as eligible for promotion. These officers will not, however, be withdrawn from the special duties on which they are now employed, but will be seconded by those Sub-Deputy Collectors who have similar claims to be raised to the higher branch of the service. The remaining six appointments will be given in the form of every alternate vacancy to the six gentlemen referred to in the preceding paragraph. Should the number of appointments actually falling vacant be less or greater than the number assumed as probable in the present estimate, they will be divided in the ratio stated above, that is to say, one-half will be given to the Special Deputy Collectors and Sub-Deputy Collectors already selected for promotion, and one-half to those candidates for appointment by nomination who are found to have the strongest claims. No competitive examination will take place during the current year.

14. Early in 1890 an examination will be held for admission to the upper branch of the Subordinate Executive Service. This examination with some modifications to be published hereafter in the *Calcutta Gazette*, will be of a general character resembling that set forth in the Resolution of the 22nd November 1887, prescribing revised rules for the Statutory Civil Service Examination. But it may be stated here that candidates will be required to have passed the B. A. examination of the Calcutta University, or to produce satisfactory evidence from competent authority of having received a good education up to an analogous standard. Their age must not exceed 25 years. They will have to give satisfactory proof of physical fitness, good moral character, and social respectability, and they will also have to produce a certificate, signed by a district officer, of their ability to ride well enough for the requirements of ordinary administrative work. Candidates for appointments by nomination whose names are entered on the lists kept up in the Secretariat will also be permitted to compete at the examination of 1890 provided that they have not attained the age of 30. With reference to the results of this examination, nine candidates will be declared to be qualified for appointment to the Subordinate Executive Service, and will at once be employed as probationers, on a subsistence allowance of Rs. 50 a month, in the manner described in the Government Resolution of the 19th March 1887. Six of the candidates thus selected will be those who obtain most marks in the examination, and three will be chosen from among those gentlemen who, having adequate claims to appointments by nomination, and having complied with the rules of the examination regarding educational qualifications, character, ability to ride, &c., have also succeeded in obtaining not less than one-third of the total marks. At the same time three Special Deputy Collectors or Sub-Deputy Collectors, as the case may be, from among those already selected, will be notified as eligible for promotion to the upper branch of the service. All twelve names will be published

in a combined list, and according to the position assigned to them by Government on that list, the candidates will be appointed to fill vacancies in the Subordinate Executive Service as they occur.

15. In the examination of 1891, as in that of 1890, gentlemen whose names are on record in the Secretariat as candidates for appointment by nomination will again be admitted to compete if they are under thirty, in addition to gentlemen possessing the general qualifications specified in the preceding paragraph. The number of appointments to be allotted after this examination will be in a great measure dependent upon the number of vacancies that may have occurred during the previous year. If the twelve candidates pronounced eligible in 1890 have been provided with appointments within the year, the list published in 1891 will comprise a number of names corresponding to the number of vacancies which may be expected during the year. If, on the other hand, some of the candidates selected in 1890 are still undisposed of, the list of 1891 will be reduced in proportion, and those whose names were published in the previous year will be held to have a superior claim to the first vacancies that occur. But whatever number of appointments may be available will be divided as far as possible in the ratio stated in the last paragraph between candidates selected by competition, candidates selected by nomination, and Sub-Deputy Collectors who are deemed fit for promotion. The privilege, conceded to candidates already on the Secretariat lists, of admission to the examination without reference to the ordinary limit of age will only be recognised at the examinations of 1890 and 1891. The examinations of 1892 and of subsequent years will be open only to candidates under 25 years of age, whether included in the Secretariat lists or not. In other respects the conditions laid down in the last paragraph will be adhered to in the case of all candidates.

16. The state of the case as regards the existing candidates for appointment to the lower branch of the Subordinate Executive Service is closely analogous to the circumstances affecting the upper branch. The list kept up in the Secretariat contains no less than 117 names. Some few of these gentlemen have received from former Lieutenant-Governors an intimation of the desire or intention to confer appointments upon them in the event of the state of the list rendering it possible to do so, and in some of these cases the expectations held out to the candidate may have been sufficiently distinct to warrant them in believing that a definite promise had been made. Of the rest a certain number, to whom no such communication appears to have been made, have nevertheless claims which the Government would be willing to recognise so far as the number of vacancies may permit. There are also among the officers now employed as canoongoes five gentlemen who passed in the first two classes at the Native Civil Service examination in Sir G. Campbell's time, and who are reported by the Commissioners under whom they serve to merit promotion to the post of Sub-Deputy Collector. As a matter of general policy, Sir S. Bayley thinks it doubtful whether canoongoes should as a rule be made eligible for promotion to the lower branch of the Subordinate Executive Service. Their duties and their official status are such as to place them rather in the position of ministerial officers, and this seems to be the place which they occupy in public estimation. As soon as existing anomalies have been got rid of, and the various grades of Subordinate Executive agency in Bengal reduced to some systematic order, the Lieutenant-Governor proposes to prohibit the promotion of canoongoes to be Sub-Deputy Collectors, and to arrange for the recruitment of the canoongoe service in connexion with the examination recently instituted for certain clerical appointments. Meanwhile it is necessary to consider the claims of the five canoongoes referred to above, who will be held to be entitled to appointment to the grade of Sub-Deputy Collector in the manner explained below. There are also some canoongoes who passed the Civil Service Examination instituted by Sir G. Campbell in the lowest division, or who have not passed any examination, but who have been strongly recommended for promotion by Commissioners, and some of whom have actually acted as Sub-Deputy Collectors. The Lieutenant-Governor will make an effort to promote the most deserving of these if practicable.

17. The average annual number of vacancies in the lower branch of the Subordinate Executive Service cannot be estimated at more than ten, while it has

already been stated that the names of 117 candidates are entered on the Secretariat list. Even if every vacancy were allotted to these gentlemen, and no fresh claims were admitted, it would take about twelve years to exhaust the list, and the large majority of candidates would have passed the age of 25 many years before their turn to receive appointments could arrive. The prospect of being able to give appointments to any substantial proportion of these gentlemen would again be rendered more remote by the necessity of recognising the claims of those canoongoes who passed the Native Civil Service examination, and have since done good service and been favourably reported on. This being so, it is clear that the applications now on record must be as carefully scrutinised as those for appointment as Deputy Magistrates, and that a system of strict selection must be resorted to with the object of clearing the list.

18. It appears to the Lieutenant-Governor that the question of recruiting Sub-Deputy Collectors admits of being treated on virtually the same lines as the question of recruiting Deputy Collectors, and that a mixed system of competition and nomination will be found to meet the requirements of this, as well as of the higher, service. During the current year no examination will be held, and the appointments which may fall vacant will be equally divided between the five canoongoes deemed eligible for promotion and those candidates whose names are recorded in the Secretariat as possessing the strongest claims to consideration. Should there be more than ten vacancies during the year, they will be filled up from among candidates of the last-mentioned class. In 1890 the registered candidates for appointment as Sub-Deputy Collectors will be permitted to appear at an examination, the conditions of which will be defined in a notification in the *Calcutta Gazette*, but which will be of the same general character as that for Deputy Collectors, though the standard will be lower. Registered candidates for appointments as Deputy Magistrates, who intimate before the examination their desire to be appointed as Sub-Deputy Collectors, will also be allowed to compete. From among these two classes (viz., Registered candidates for Sub-Deputyships only, and Registered candidates for Deputyships who are willing to take Sub-Deputyships), the ten candidates who obtain most marks will be declared eligible for appointment as Sub-Deputy Collectors, and will be appointed to fill vacancies in the grades of Sub-Deputy Collectors as they occur. Should there be more than ten vacancies during the year, the Lieutenant-Governor may be able to appoint some of the deserving canoongoes mentioned in the last sentence of paragraph 16. Pending their appointment, those of them who are not already in Government service will be employed as probationers on a subsistence allowance of Rs. 30 a month. A similar examination will be held in 1891, and at both examinations candidates whose names are entered on the Secretariat list will be permitted to appear provided they have not attained the age of thirty years. After 1891 there will be an examination held annually open to all persons who have passed the F. A. Examination, or can produce proof of analogous education. This examination will be conducted under rules to be notified in the Gazette, and the vacancies that may occur in the Sub-Deputy service will be divided equally between the candidates who obtain most marks in the examination and those nominees who obtain not less than one-third of the total marks. The names will be published in a combined list, and, according to the position assigned to them by Government on that list, the candidates will be appointed to fill vacancies as they occur. If the candidates whose names are published are not provided with appointments within the year, the list of the following year will be reduced in proportion.

19. The scheme set forth above commends itself to Sir Steuart Bayley as one which offers a practicable solution of a question of great difficulty and complication, and which promises to provide an adequate and final method of recruiting the Subordinate Executive Service in future. For the reasons already explained, it is obviously impossible to satisfy more than a small proportion of the expectations of appointment by nomination in one or other branch of the service of those who have been registered as candidates. It being, however, impossible to add to the number of appointments available for distribution, the only alternative is to reduce the number of candidates by strict scrutiny of their fitness and by giving a large scope to the principle of competition. The time has not come when open competition can be

accepted as the sole method of recruiting the Subordinate Executive Service. Some parts of Bengal and some classes of the population are as yet too backward educationally to be fitted for this larger reform, and, in consideration for their peculiar circumstances, the Lieutenant-Governor thinks that the power to make appointments by selection should still be retained. But while reserving this discretion, he desires to exercise it on as small a scale as possible, and to prepare the way for a further adoption of competition by allotting one-half of the available appointments in either branch of the service in accordance with the results of the examination. At the same time an attempt has been made to improve the prospects of those candidates for nominations whose applications have already been recorded by admitting them to compete on exceptionally favourable terms.

ORDER.—Ordered that copies of this Resolution be forwarded to the Financial and Revenue Departments, with reference to paragraph 10.

Ordered also that the Resolution be published in the Supplement to the *Calcutta Gazette.*

By order of the Leutenant-Governor of Bengal,

J. WARE EDGAR,

Chief Secretary to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 27th April 1889.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
	Western Districts.		
Burdwan Divn.			
1	Burdwan April 27, '89	Nil	Weather—hot and dry. No crops, except a little *boro dhan*, which is good. Common rice at Burdwan 15¼ seers, Culna 13 seers, Cutwa 14⅝ seers, and Raniganj 14 seers per rupee. Prices of all food-grains rising. Rain wanted.
2	Bankoora " 27, '89	Nil	Weather—hot and occasionally cloudy. Manuring and ploughing of fields for the next crop going on, but rain is wanted for this as well as for the standing crops of *til* and cotton. Common rice is selling at 17 seers per rupee at the Bankoora mart. It sold at 21 seers at Bissenpore in the previous week, but the price is reported to have slightly risen there in the last week.
3	Birbhum " 27, '89	Nil	The great heat continues. No crops on the ground. Rain wanted for ploughing. Common rice 16 seers per rupee.
4	Midnapur " 27, '89	Nil	Weather—very hot. Rain is now wanted to enable the fields to be prepared. The *boro* crop in Kasijora pergunnah of Tumlook has been reaped, and averaged 10 annas. Mulberry doing fairly.
5	Hugli " 27, '89	Nil	Weather—seasonable. Outturn of *boro* rice good. Ploughing in progress. Price of rice at Hugli Rs. 3-4 per maund, and at Johanabad Rs. 2-8 per maund.
	Howrah " 27, '89	Nil	Weather—very hot days. Tilling of lands for *aus* and jute going on. Sugarcane has been planted out to the extent of 16 annas. Rain much wanted. Common rice from 12 seers per rupee at Sudder to 16 seers per rupee at Shampur.
	Central Districts.		
Presidency Divn.			
6	24-Perghs. April 27, '89	0·21	Weather—abnormally hot with occasional clouds and high winds. Sugarcane, the only crop on the ground, is doing well. Ploughing continues, but rain much wanted. Prices of food-grains vary from 13 to 15 seers per rupee.
7	Nuddea " 27, '89	Nil	Weather—very hot. Rain much wanted. Ploughing going on. Sugarcane and indigo doing well. Sowings of early rice have commenced in the Chuadangah sub-division.
8	Khoolna " 27, '89	1·57	Weather—very hot till to-day (27th), when a good shower has cooled the temperature. *Boro* paddy is being harvested in some parts; outturn is good in Bagirhat, but unsatisfactory elsewhere. *Til* and *boro*, the only crops on the ground, were being seriously damaged for want of rain; but the rain which has fallen to-day (27th) will do them some good. It will also, if it has fallen over the whole district, enable the cultivators to sow *aus* paddy.
9	Jessore " 27, '89 Magura ... Narail ...	Nil 0·39 0·14	Weather—very hot. Rain badly wanted for sowing of *dhan* and jute. Price of rice rising.
10	Moorshedabad " 27, '89	Nil	Weather—hot and dry, but cloudy at intervals. Sowings postponed for want of rain. In consequence of the want of rain, there is scarcely any mulberry leaf available for silk rearing.
Rajshahye Divn.			
11	Dinagepur " 27, '89 Thakurgaon ...	Nil 0·98	Westerly winds commenced again. Jute and *bhadoi* paddy are being sown, and sugarcane is being planted. Some rain would be beneficial.
12	Rajshahye " 27, '89	Nil	Weather—very hot. Rain urgently wanted. Rice sells at 15½ seers per rupee.
13	Rungpur " 27, '89	Nil	Weather—still unsettled; north-westerly winds and cloudy skies, but often oppressively sultry. The young paddy is coming up splendidly. Jute is being sown, and the losses by the recent drought repaired by fresh sowings of paddy where needed. More rain is, however, needed in the south.
14	Bogra " 27, '89 Sherpore ... Nowkhilla	Nil 0·01 0·30	Weather—in the west and middle of the district, hot and dry, with occasional clouds and storms of wind; in the east some rain has fallen. Harvesting of barley and late pulses over; outturn 10 annas. Jute and paddy are still being sown, but the seedlings are withering where there has been no rain, and the prospects are poor. Rain is urgently needed. Price of common rice 19 seers per rupee.
15	Pubna " 27, '89	Nil	Weather—sultry. Slight rain in the Serajgunge sub-division. *Aus* and jute sowings are kept back for want of rain. Sugarcane and *boro dhan* are also suffering.
16	Darjeeling " 27, '89	0·72	A good deal of rain during the week, which was fairly distributed. *Bhadoi* sowing well advanced. Prospects generally fair. Recent rain has done much good.
17	Julpigoree " 27, '89	Nil	Weather—hot and cloudy. Rain much wanted. Sowing of jute and paddy going on. No change in prices.
	Eastern Districts.		
Dacca Divn.			
18	Dacca April 27, '89	0·08	Weather—very hot and cloudy at times. Cultivation of jute and paddy crops continues. Sowing of paddy going on slowly. More rain wanted. *Boro dhan* is being harvested.
19	Furreedpur " 27, '89	Nil	Weather—hot and cloudy. Sowing of *aus* and *amun* rice is retarded for want of sufficient rain. Price of common rice 13½ seers per rupee, and is rising.
20	Backergunge " 27, '89	Nil	Weather—very hot. Ploughing for *aus dhan* progressing, but more rain wanted.
21	Mymensingh " 27, '89	0·99	Weather—variable. Harvesting of *boro* rice is nearly completed. *Aus* rice and jute are being sown where there has been rain, but in the Jamalpore and Tangail sub-divisions there has been little or no rain, and the prospects are unfavourable.
Chittagong Divn.			
22	Chittagong " 27, '89	0·02	Weather—still hot. Prospects of miscellaneous crops are not favourable. Rain is much required for preparing lands for *aus* crops.
23	Noakholly " 27, '89	Nil	Weather—very hot and sultry. Harvesting of *rubbi* crops is being completed. Sowing of *aus* crops continues. Rain wanted.
24	Tipperah " 27, '89	2·13	Weather—strong winds followed by a heavy rainstorm; hot at end of week. *Aus*, *amun* and jute are being sown. Nine annas of *aus* and six annas of *amun* have been sown.
25	Chittagong Hill Tracts. ...	......	Report not received.
	Hill Tipperah " 27, '89	3·40	Weather—hot and stormy with occasional rain. Rain on 21st and 24th. Sowing of jute has commenced. Lands are being prepared for *satya* paddy and sugarcane. No change in prices.

	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.					
Patna Divn.	26	Patna	April 27, '89	Nil	Weather—hot. Threshing and winnowing of *rubbi* crops almost completed. Lands are being prepared for *bhadoi* crops. *Boro dhan* is ripening. Prices of food-grains stationary.
	27	Gya	„ 27, '89	A few drops.	Weather—hot; cloudy with west wind. Threshing of *rubbi* crops almost finished. Sugarcane is being irrigated. Opium weighments going on in all Agencies. Prices of food-grains rising high.
	28	Shahabad	„ 27, '89	Nil	Weather—hot with west wind. *Cheena* is being cut with an average outturn. Sugarcane doing well. Prices stationary.
	29	Durbhunga	„ 27, '89	Nil	Weather—changeable; occasionally cloudy during the latter part of the week. Rain wanted for *cheena, mung, dhan* and indigo. Threshing of *rubbi* harvest continues. Lands are being ploughed for *bhadoi*, but ploughing is not progressing favourably for want of moisture. Prices rising.
	30	Mozufferpur	„ 27, '89	Nil	Weather—hot and close, with west and east winds alternately. *Rubbi* harvest finished. Rain urgently required for indigo and *cheena*. *Bhadoi* lands are being prepared.
	31	Sarun	„ 27, '89	Nil	Weather—seasonable. *Cheena* doing well. Indigo wants rain. Opium weighments nearly over.
	32	Chumparun	„ 27, '89	Nil	Weather—hot, with east and west winds alternately. Estimated outturn of linseed from 8 to 12 annas. Opium weighments finished, the result being one-third below the estimate. *Cheena* on uplands withering for want of rain. Rain is also needed for general agricultural operations. Prices rising.
Bhagulpore Divn.	33	Monghyr	„ 26, '89	Nil	Weather—hot and sultry with occasional east wind. Threshing of *rubbi* crops finished, and the grain is being housed.
	34	Bhagulpur	„ 27, '89	Nil	Weather—very hot with return of west wind. Threshing-floors nearly cleared, and rain would now do good everywhere. Sugarcane promising. Mango crop an utter failure. Prices rising slightly.
	35	Purneah Kishengunge	„ 27, '89	Nil 0·47	Weather—hot and seasonable with west winds towards the end of the week. No crops on the ground. Sowings of *bhadoi* crop impeded for want of rain.
	36	Maldah	„ 27, '89	Nil	Weather—hot with clouds and high wind. A few drops of rain last night (26th). Harvesting of *boro* paddy has begun. Rain is much wanted for this crop as well as for *bhadoi* and *haimanti* sowings. An average mulberry crop has been reaped.
	37	Sonthal Perghs.	„ 27, '89	Nil	Weather—hot and cloudy at times. Rain wanted. No crops to report on except from Rajmehal sub-division, where *boro dhan* is in ear and *bhadoi dhan* is coming up. Prices stationary.
ORISSA.					
Orissa Divn.	38	Cuttack	„ 27, '89	Nil	Weather—hot and sultry. Ploughing of land for *beali* and *sarad* crops has made no further progress than previously reported for want of rain. Harvesting of *dalua* rice nearly completed; outturn may be estimated at 10 annas throughout the district.
	39	Pooree		......	Report not received.
	40	Balasore	„ 26, '89	Nil	Weather—very hot. Sugarcane is being planted. Cotton is in flower. Rain urgently needed all over the district.
CHOTA NAGPORE.					
South-West Frontier Agency.					
Chota Nagpore Divn.	41	Hazaribagh	April 27, '89	Nil	Weather—somewhat unsettled. Cloudy and comparatively cool. Prospects of sugarcane very good. Harvesting of *mohwa* completed; yield from 12 to 16 annas. No other crops. Prices stationary.
	42	Lohardugga	„ 27, '89	0·13	Weather—cool. Cloudy with occasional showers of rain during the latter part of the week. Nothing important to note regarding the prospects of crops. In Palamow fields are being prepared for *kapas* cultivation. Prices stationary.
	43	Singbhoom	„ 27, '89	Nil	Weather—cloudy and cool. Rain beginning to fall. Sugarcane and *boro dhan* are doing well. Prices stationary.
	44	Manbhoom	„ 27, '89	Nil	Weather—seasonable with clouds at intervals. No crops on the ground. *Mowah* is being harvested; probable outturn 10 annas. Rice selling at from 18 to 22 seers the rupee.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, t, thunder, p passing temporary showers, [dust-storm symbol] dust-storm.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbers are the numerical means or average of the rain[illegible] determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least undredth of an inch fell.

for the week ending Friday, the 26th of April 1889.

Explanation.—...... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 30*th April* 1889.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 26TH APRIL 1889.

At the close of the previous week conditions were fairly normal for the period, but on the morning of the 20th a rapid fall of pressure had taken place over Bengal, while over the remainder of Northern India pressure was rising. A feeble low-pressure area was therefore formed over the province, and conditions became slightly disturbed, but beyond giving a few local storms in East Bengal which were accompanied by light rain only, and a rather general series of disturbances in the districts of North Bengal near the hills which were accompanied by heavy rain, the depression caused no changes of importance On the 21st a further very rapid fall of pressure took place over Bengal, which rather intensified the depression, but the local storms caused by the disturbance were less numerous on this day than on the 20th From the 22nd pressure commenced to rise, the increase being at first slow ; but on the 23rd and 24th it was very rapid, and the distribution of pressure entirely changed, and pressure became decidedly high over North-Eastern and Central India, and to a certain extent over Bengal also. With the change in the distribution of pressure the strong southerly winds which had been blowing at the head of the Bay commenced to fall off in force, and on the 24th north-westerly winds had begun to make themselves felt in the western districts, and by the morning of the 25th a very abnormal dry north-westerly wind was blowing over a large part of South Bengal, and had completely driven back the strong southerly winds which had been previously blowing On the 24th, owing to the disturbance produced by this interaction, a series of local storms, in some cases attended with very heavy rain, occurred in East Bengal, but all other districts remained practically rainless This abnormal north-westerly current continued to blow on the 25th and 26th over a very considerable part of the province, but perhaps less strongly on the 26th. And on these days pressure commenced to fall, the fall being moderately large on the 25th and small on the 26th. Even at the close of the week, however, the pressure distribution was somewhat unusual, and decidedly high pressures were recorded in the west of the province in connection apparently with a high-pressure area which existed over Central India

Pressure.—The pressure changes during the week have therefore been large. On the first two days there was a particularly rapid fall; this was followed by a rise almost equally rapid which lasted for three days, and then by a moderate fall for two days. For the whole week the mean pressure of the province has been almost normal, the average variation not exceeding five thousandths of an inch. At the western stations pressure has been in decided excess, while elsewhere slight defective pressures have been recorded.

Temperature.—For the greater part of the week temperature has been increasing. The increase was very decided during the first three days ; this was followed by two or three days when the changes were a little variable, but towards the close of the week again temperature commenced to increase Temperature has consequently been rather largely in excess of the normal, the excess in the mean temperature in Bengal being 4·4° and in East and North Bengal about 4°. For the whole province the excess in the mean temperature has averaged 3 4°.

The general distribution of temperature during the week and its variation from the normal are clearly shown in the following table, where the average maximum, minimum and mean temperatures for the week at nine typical stations in the province are compared with the normal values. From the table it will be seen that both the day and night temperatures have been rather largely above the normal : —

Table showing the excess or defect of the actual mean temperature from the normal for the week ending Friday, the 26th April 1889.

	Normal mean maximum temperature for the week ending 26th April	Actual mean maximum temperature for the week ending 26th April 1889.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 26th April.	Actual mean minimum temperature for the week ending 26th April 1889.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 26th April.	Actual mean daily temperature for the week ending 26th April 1889.	Variation of actual mean from the normal.

Darjeeling	61·2	?	?	47·8	54 1	+6 3	54 5	?	.

Rainfall.—The only districts in which the rainfall during the week has been at all important have been East and North Bengal, where the falls have averaged about half an inch. In other districts the rainfall has been so small that it does not average more than a few hundredths of an inch In all districts the falls have been very considerably below the normal for the period.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 26th April 1889:—

Meteorological Divisions.	Temperature						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 16th May 1888.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The mean 10 A.M. relative humidity of the seven days ... ... 58 %

The total fall of rain from 21st to 27th April 1889 ... ... Inches. Nil

The daily mean temperatures are the crude means of maximum and minimum temperatures.

METEOROLOGICAL OFFICE, INDIA;
The 29th April 1889.

JOHN ELIOT,
Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE table appended to this memorandum exhibits the vital statistics of the principal Municipalities in Bengal (excepting the Hughli and Chinsurah Municipality, from which no return has been received) for the week ending 13th April 1889. The figures in this table indicate—

1. Births were registered in this Municipality at the rate of 21·4 per 1,000 of population, against very nearly the same proportion, viz., 21·3 per 1,000, during the preceding week ending 6th April, and deaths at 21·4 per 1,000 against 24·8 per 1,000, indicating a large retrogression in the registration of deaths.

2. These events were returned in the highest proportions from the following Municipalities :—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Comillah	46·2	Purneah	76 2
Narainganj	45·5	Puri	46 1
Durbhanga	43 8	Gya	40·3
Serampore	35·3	Rampore Beauleah	39·4
Bhagulpore	34·4		
Howrah	29 8		

3. The subjoined table gives the death-rates from the following specific diseases. The figures denote that as compared with the results of the preceding week, there was an abatement of mortality from all the diseases, noticeably from cholera :—

	Ratio per *mille* during the weeks ending— 13th April 1889.	6th April 1889.
Cholera	4·0	5·3
Small-pox	·1	·3
Fever	8·6	9 1
Bowel-complaints	2 1	2·6
Injury	·2	·3
Other causes	6·4	7·2

4. The highest death-rates from cholera and the diseases coming under the head of "Other causes" were returned from the following Municipalities :—

Cholera.	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Purneah	51·9	Bhagulpore	18 1
Puri	23·0	Narainganj	16·6
Serampore	13 7	Purneah	13 9
Rampore Beauleah	10 5	Gya	12 3
Gya	7 5	Chupra	10 7
Howrah	5 2	Puri	10·5
Dacca	3 9		

The other maladies, excepting fever, did not prove conspicuously fatal anywhere. Fever appears to have prevailed with noticeable fatality only in Rampore Beauleah Municipality, where the death-rate was 21·0 per 1,000 of population.

5. With reference to *Sex*, *Class* and *Age*, the mortality of the week stood as follows :—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille*
Males	24·2	Christians	13 5	Under 1 year ...	183 8
Females	18·3	Hindus	21 9	1 and under 5 years ...	20·0
Ratio of male deaths to every 100 female deaths	142	Mahomedans. ...	20 2	5 „ 10 „ ...	8 7
		Budhists ...	25 7	10 „ 15 „ ...	10·5
		Other classes ...	78·4	15 „ 20 „ ...	15 9
				20 „ 30 „ ...	13 9
				30 „ 40 „ ...	11 9
				40 „ 50 „ ...	20·6
				50 „ 60 „ ...	24·3
				60 years and upwards ...	53·0

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 30*th April* 1889.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 13th April 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

Comparative Statement of the principal commodities carried over the Eastern Bengal State Railway during the month of January 1889.

INCREASES.

	Tons.
Coal ...	6,794
For Railway and Flotilla purposes: also for brick-burning for Kidderpore Docks.	
Cotton piece-goods ...	351
Increase in despatches from Armenian Ghât and Calcutta for up-country consumption.	
Jute ...	10,443
The Northern Bengal State Railway contributed about 6,000 tons of the above increase; there were also large increases in despatches from Serajganj and Naraingunj.	
Metals ...	626
This items includes machinery for tea-gardens.	
Oilseeds ...	370
Ordinary fluctuation.	
Railway plant ...	6,454
For repairs, renewals, and maintenance.	
Salt ...	2,693
A portion of this was for hide-curing purposes.	
Sugar ...	642
An improved market following a protracted period of depression.	
Firewood ...	767
From the Southern Section for consumption in Calcutta.	
Tobacco ...	712
From the Northern Section principally.	
Hay, straw and woolloo ...	411
From the Southern Section.	

DECREASES.

	Tons.
Rice ...	6,683
Due to failure of crop in Southern Section, and a short crop in Northern Bengal.	

Calcutta, the 29th April 1889.

F. P. QUINLAN, *Examiner of Accounts.*

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT

ROAD CESS.

No. 1790R.C.

Dated Calcutta, the 30th April 1889.

READ—

Letter from the Accountant-General, Bengal, No. 28LF, dated the 9th April 1889, submitting an abstract of the receipts and expenditure of the several District Road Committees in Bengal for the quarter ending 31st December 1888.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees, for the third quarter of the year 1888-89, be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette.*

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded to the Commissioners of the Rajshahye, Bhagulpore, Chittagong and Chota Nagpore Divisions; to the Superintending Engineers of the Eastern and Western Circles; and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

W. B. BESTIC,

Under-Secy. to the Govt. of Bengal,

P. W. Dept.

E. T. ATKINSON,

Accountant-General, Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 4th May 1889.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.	*Western Districts.*		
Burdwan Divn.			
1	Burdwan May 4, '89	Nil	Heat much above the month's average. Rain wanted. Price of common rice ranges from 13 seers per rupee at Culna to 16 seers at Burdwan, the average for the district being about 15½ seers. Brisk sales of potatoes reported in Culna. A small outbreak of cattle-pox in Cutwa sub-division.
2	Bankoora „ 5, '89	Nil	Weather—excessively hot. Rain is badly wanted everywhere for ploughing, which is reported to have ceased in the Sudder sub-division, as well as for the growth of the standing crops. Prices of common rice 17½ seers per rupee at Sudder and 17¼ seers at Bissenpore.
3	Birbhum „ 4, '89	Nil	Weather—very hot, no signs of rain. No crops on the ground. The continued drought postpones ploughing for the next crops. Price of common rice rising. It is 13½ seers per rupee at head-quarters and about the same at Rampore Haut, the average for the district being 15 seers against 17 seers in the previous fortnight.
4	Midnapur „ 4, '89	·03	Weather—very hot. No rain. Ploughing has commenced in places, but rain is wanted for it generally. Mulberry is suffering for want of rain. Cocoons are stated to have been affected in Ghatal by the heat, the price having declined from Rs. 26-27 to Rs 24-25 a maund. Prices of rice are as follows:— Rs. A. P. Midnapore ... 2 7 0 per maund. Ghatal ... 2 8 0 per maund. Contai ... 2 8 0 per maund. Tamlook ... 2 12 0 per maund. Prices have risen in almost all thanas, and in some considerably.
5	Hugli „ 4, '89	Nil	Weather—hot with high wind from the south-west. Rain needed for ploughing and sowing of *aus* and jute Price of common rice at Jehanabad Rs. 2-8 per maund, and at Hooghly from Rs 3-8 to Rs. 3-12 per maund.
	Howrah „ 4, '89	Nil	Weather—hot. Strong winds. Rain badly wanted for jute and *amun*. *Amun* is being sown in low lands. Price of common rice at Sudder 12 seers per rupee and at Ulubariya 13¼ seers per rupee
	Central Districts.		
Presidency Divn.			
6	24-Perghs. May 4, '89	Nil	Weather—very hot, dry and sultry, with occasional clouds and high winds. Ploughing is progressing, but rain is much wanted Prices of food-grains vary from 12¼ seers to 15 seers per rupee.
7	Nuddea „ 4, '89 Kooshtea ...	Nil 0 11	Weather—hot with strong south wind. Rain much wanted everywhere. Ploughing going on. Sugarcane and indigo doing well. Sowing of early rice commenced in parts of Chooadanga and Meherpore sub-divisions.
8	Khoolna „ 4, '89	Nil	Weather—hot with high wind. Good rain has fallen in the Bagirhat sub-division, but none in Satkhira Ploughing going on, but retarded in the western parts for want of rain *Boro* and *til* are being harvested in the Bagirhat and Khoolna sub-divisions; outturn good in Bagirhat, below the average in Khoolna.
9	Jessore „ 4, '89 Jhenidah .. Magura Narail ..	Nil 0·75 2·06 0·11	Weather—very hot with strong south-west wind in the evening. Sowing of *aus* and jute at a standstill in the Sudder and Bongong sub-divisions for want of rain. Prices of rice rising.
10	Moorshedabad „ 4, '89	Nil	Fine dry weather with passing clouds and duststorms. Abnormally hot south-west winds. Very little *aus* rice sown on account of want of rain. *Boro* paddy is being harvested. Price of common rice averages 14 seers the rupee. The price has been steadily rising during the past two months.
Rajshahye Divn.			
11	Dinagepur „ 4, '89	Nil	Weather—unusually hot with west wind. Jute, early rice and sugarcane are suffering from want of rain.
12	Rajshahye „ 4, '89	Nil	Weather—very hot. Rain much wanted. Price of rice has gone up; now 14¼ seers per rupee.
13	Rungpur „ 4, '89	0·11	Weather—still unsettled. Sultry with occasional gales of wind from the north-east. The young jute is coming up well and paddy is flourishing. Sowings of both are completed. More rain is, however, wanted. Measures are being taken throughout the district to improve the water-supply, which is very defective and the cause of a good deal of disease.
14	Bogra „ 4, '89 Sherpore . Nowkhilla	0 03 0 86 1·14	Weather—very hot, with variable winds, often very high; in the middle of the district excessively dry. The long continued drought in the middle and west of the district is serious. The seedlings are withering, the grass is burnt up, and no plough can be worked. Sowing of jute and paddy still going on elsewhere. In the south and east, where there has been some rain, prospects are better. Common rice selling at 19 seers a rupee.
15	Pubna „ 4, '89	0·11	Weather—hot. Slight rain in some parts. More rain wanted for sugarcane, jute and *boro dhan*. *Aus* sowings not doing well.
16	Darjeeling „ 4, '89	0 86	Weather—during week has been decidedly boisterous. Rain is wanted in Siliguri division. Agricultural prospects are fair.
17	Julpigoree „ 4, '89	Nil	Weather—very hot; cloudy at intervals with high winds. *Bhadoi* paddy and jute have been sown to the extent of about ten annas. Rain urgently wanted. Price of common rice 17 seers a rupee.
	Eastern Districts.		
Dacca Divn.			
18	Dacca May 4, '89	0·05	Weather—hot and cloudy with strong wind; rain with large hailstones fell in Naraingunge sub-division. Cultivation of jute, *til* and paddy crops going on. The crops already sown have been benefited by the recent rain. *Boro* paddy is being harvested, but owing to want of rain in due time has suffered to some extent.
19	Furreedpur „ 4, '89	1·15	Weather—hot with high wind. A little rain has fallen and sowing of paddy is in progress. More rain wanted. Price of common rice has risen to 12 seers per rupee.
20	Backergunge „ 4, '89	1·11	High wind with occasional showers. Ploughing for *aus dhan* progressing. More rain wanted.
21	Mymensingh „ 4, '89	0·97	Weather—cloudy and stormy. State and prospects of crops generally good, excepting in Tangail sub-division. Harvesting of *boro* rice is now completed; the outturn is about ten annas.

	No.	District and date of return.	Rainfall at sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
		Eastern Districts—concld.		
CHITTAGONG DIVN.	22	Chittagong May 4, '89	3·67	Weather—hot. State of miscellaneous crops fair. Lands are being prepared for *aus*. It is being sown in some places. A fair quantity of rain has fallen since last Saturday, which will do much good.
	23	Noakholly ...	......	Report not received.
	24	Tipperah ...	....	Ditto.
	25	Chittagong Hill Tracts. ...	......	Ditto.
		Hill Tipperah ...	.....	Ditto.
BEHAR.				
PATNA DIVN.	26	Patna May 4, '89	Nil	Weather—hot and sultry. Fields are being prepared for *bhadoi* crops. Threshing and winnowing of *rubbi* crops still continue. *Boro dhan* is being reaped. Prices of food-grains rising.
	27	Gya „ 4, '89	Nil	Weather—hot and fair. Threshing of *rubbi* crops almost finished. Opium weighments going on at Sudder Sub-Agency. Prices of food-grains rising high.
	28	Shahabad „ 4, '89	Nil	Weather—hot with west wind. Hardly any crop on ground but sugarcane. Prices rising on account of demand for export.
	29	Durbhunga „ 4, '89	Nil	Dry weather continues; excessive heat during the day. *Cheena*, *mung* and rice on low-lying lands are suffering very much from want of rain. Preparation of lands for *bhadoi* is not progressing for want of moisture. Mango crop considerably injured by west winds. Common rice is selling at 12¼ seers per rupee.
	30	Mozufferpur „ 4, '89	Nil	Weather—hot with strong winds. Rain urgently required for ploughing. *Cheena* crop much withered.
	31	Sarun „ 4, '89	Nil	Weather—seasonable. *Cheena* doing well. Opium weighments over. Rain wanted for indigo.
	32	Chumparun „ 4, '89	Nil	Weather—hot; nights and mornings cool. Rain wanted for indigo, *mung* and paddy. *Cheena* withering and dying. Prices have risen and tend towards a further rise. Pressure in the affected area increasing; its effect has begun to reach other parts in the vicinity.
BHAGULPORE DIVN.	33	Monghyr „ 4, '89	Nil	Weather—hot and sultry with west and east winds alternately. No crops on the ground, except *cheena* and sugarcane; the latter is being irrigated. Rain is now wanted for ploughing of fields for the next *bhadoi* crops. Prices of food-grains rising.
	34	Bhagulpur „ 4, '89	Nil	Weather—very hot. In the north rain much wanted for low-land rice and *mung*. The latter is withering. In the south little but sugarcane and indigo on the ground. Rain wanted for ploughing. Prices rising everywhere.
	35	Purneah „ 4, '89	Nil	Weather—dry and very hot. No crops to report. Rain very much wanted to enable agricultural operations to proceed.
	36	Maldah „ 4, '89	Nil	Weather—very hot and dry. Strong changeable winds. Harvesting of *boro* paddy continues in some places; in others the crop is being watered by artificial means. Sowings of *bhadoi* and other rice retarded for want of rain. About 14 annas of jute sown, but the little plants are withering for want of rain. Indigo much burnt up. Price of rice rising.
	37	Sonthal Perghs. „ 4, '89	Nil	Weather—intensely hot with west winds. No rain. Sugarcane and indigo suffering for want of rain. Prices rising in Pakour sub-division, but stationary elsewhere.
ORISSA.				
ORISSA DIVN.	38	Cuttack „ 4, '89	Nil	Weather—sultry. For want of rain no further progress has been made in ploughing operations than what was noted in previous reports.
	39	Pooree	... ..	Report not received.
	40	Balasore „ 3, '89	Nil	Weather—very hot. Rain urgently needed in every part of the district. The want of it is causing many deaths from disease, and is seriously hindering cultivation. Price of rice rising.
CHOTA NAGPORE.				
		South-West Frontier Agency.		
CHOTA NAGPORE DIVN.	41	Hazaribagh May 4, '89	Nil	Weather—intensely hot. Sugarcane doing well. No other crops. Prices stationary.
	42	Lohardugga „ 4, '89	0·03	Weather—hot. *Tewa dhan* thriving in the head-quarters sub-division. Sugarcane planted in the Palamow sub-division promises well. No fluctuation in the prices of food-grains
		Palamow ..	0·17	
	43	Singbhoom „ 4, '89	Nil	Weather—very hot. Sugarcane and *boro dhan* doing well. Prices stationary.
	44	Manbhoom „ 4, '89	Nil	Weather—intensely hot. No crops on the ground, except sugarcane. Great want of water in Burrabhoom, which has injured indigo and sugarcane

* Mean of 5 days.

Explanation.—Summary.— The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 27 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE 3RD MAY 1889.

At the commencement of the week the general conditions which obtained were those of the hot weather in a very pronounced form. Temperature was above the normal at almost all stations except a few in South Behar and Chutia Nagpur, and the excess in the mean temperature in several districts averaged about 7°. Pressure, on the other hand, was below the normal, the defect usually equalling from a twentieth to a tenth of an inch These conditions rather intensified on the 28th and 29th of April, and on the latter date the defect in the pressure varied from about a tenth to a twentieth of an inch. Pressure than rose by small amounts on the 30th, but this was succeeded by a fall on May 1st, and by a further rise on the 2nd and 3rd, the rise being decidedly rapid on the 3rd; so that at the close of the week the pressure conditions were fairly normal. Temperature, on the other hand, rose at the commencement of the week, and, except in Assam, has continued to be exceptionally high up to the close of the week, and on the 3rd, at several of the stations in the province, the mean temperature for the day was more than 10° in excess of the normal. In Assam, on the other hand, owing to the fact that rather heavy rain has commenced to be received there, temperature fell in the middle of the week, and has now become decidedly below the normal.

The usual hot weather distribution of winds has accompanied the above conditions, and strong south-westerly and southerly winds have been blowing at the southern stations, westerly winds at the western stations, and easterly winds in Assam and along the foot of the hills in Bengal. Owing perhaps to the very exceptional temperatures which have been recorded during the week, which would show that the differences of temperature between the land and sea surface must be larger than usual, the southerly breezes blowing at the head of the Bay and in South Bengal have been exceptionally strong; and at such stations as Saugor Island, wind has been blowing almost a gale for the greater part of the week; and thus from the 1st to the 2nd of May, the hourly wind velocity at that station averaged 34 miles, and for the whole week it has averaged nearly 28 miles an hour.

The general conditions in all districts, except in Assam and in East and part of North Bengal, have not been favourable for the production of local storms or nor'-westers, and thus in Orissa, South West Bengal, North and South Behar, and Chutia Nagpur rainfall has been practically absent. In Assam, on the other hand, rain has fallen on almost all days of the week, and in East Bengal and in the parts of North Bengal near the hills, rain accompanying local storms was frequent in the first half of the week.

Pressure—As previously stated, has been generally low for the greater part of the week, and the mean pressure for the whole of Bengal for the week has averaged a tenth of an inch below the normal. This defect is generally smallest at the western and southern stations, and largest in the north of the province; while in Assam the defect averages 0·114 inch, and at Sibsagar it equals 0·127 inch.

Temperature—Has been exceptionally high in all districts, except Assam, throughout the week. The general mean temperature of the week for the whole of Bengal has been nearly five degrees in excess of the normal, and in such districts as South-West and North Bengal, the excess has been between six and seven degrees. In all districts very high maximum temperatures have been reported, the highest being 115·4° at Midnapore on 30th April.

Rainfall.—The only district of Bengal which has received good general rain is East Bengal, which has averaged 1·10 inches during the week, which is, however, only about two-thirds of the normal fall for the period. In North Bengal an average fall of a third of an inch has been registered, which is only a fourth of the normal fall. In South-West Bengal a still smaller fall of less than a fifth of an inch is registered, and in Orissa and Chutia Nagpur, only a few unimportant showers are recorded, while Behar has been absolutely rainless. In Bengal, therefore, the week has again been one characterised by a largely deficient rainfall.

In Assam, on the other hand, rather heavy rain has now commenced to fall. Silchar, during the week, has received no less than 11·99 inches of rain, Sibsagar has received 5·38 inches, and Dhubri 0·55 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 3rd May 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of April.		Since 15th May 1888.

The average number of rainy days in April from 24 years' registers	8		
	●		
The mean maximum equilibrium temperature of solar radiation during the month	151·3		
The mean difference of sun and air temperatures	54·9		
The greatest sun temperature	159·2	26th.	
The greatest excess of sun over air temperature	59·6	26th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	72 3		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	4·5		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	8 7	4th.	
	Miles.		
The mean movement of the wind per day	144·9		
The greatest movement of the wind in one day	287·0	17th.	
The greatest movement of the wind in one hour	23·0	10th	10 to 11 P.M.

The number of hours with winds from each of the 8 points—

N. 7, NE. 6, E. 5, SE. 21, S. 189, SW. 353, W. 80, NW. 56, Calm 33.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·2° lower; and finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

JOHN ELIOT,
Offg. Meteorological Reporter to the Govt of India.

The total fall from 1st January to 4th May 1889	4·85
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	5·25

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

d drizzling rain, t thunder.

The mean 10 A.M. pressure of the seven days	29·678
	°
The mean temperature of the seven days	91·2
The extreme variation of temperature	23·2
The maximum temperature	103·0
	%
The mean 10 A.M. relative humidity of the seven days	67
	Inches.
The total fall of rain from 28th April to 4th May 1889	0·20

The daily mean temperatures are the crude means of maximum and minimum temperatures.

METEOROLOGICAL OFFICE, INDIA;
The 6*th May* 1889.

JOHN ELIOT,
Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE table annexed to this memorandum furnishes the following particulars in connection with the registration of births and deaths in the principal municipalities in Bengal during the week ending 20th April 1889 :—

1. Births were registered at the rate of 19·7 per 1,000 of the living, against 21·5 per 1,000 during the preceding week ending 13th April, and deaths at 21· against 21·5 per 1,000, indicating a retrogression in the registration of births.

2. The above events were returned in the highest proportions from the following Municipalities :—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Comillah	46·2	Purneah	93 5
Durbhanga	45·6	Rampore Beauleah	47·3
Rampore Beauleah	42·0	Gya	43·7
Monghyr	38·0	Puri	35 7
Serampore	35·3	Darjiling	32·6
		Serampore	31·4
		Comillah	30·8

3. From the figures in the following table, it appears that, during the week under notice, the mortality from the diseases recorded under the head "Other causes" declined to a small extent; and that the mortality under the other heads was very nearly the same as in the preceding week :—

	Ratio per *mille* during the weeks ending— 20th April 1889.	13th April 1889.
Cholera	4·2	4·0
Small-pox	·3	·1
Fever	8·3	8 5
Bowel-complaints	2·0	2·1
Injury	·5	·2
Other causes	5·6	6·5

4. Of the diseases above indicated, cholera, fever and "other causes" proved most fatal to life in the following Municipalities :—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Purneah	55·4	Darjiling ...	32·6	Puri	16·8
Rampore Beauleah ...	18·4	Purneah ...	24·2	Serampore ...	13·7
Puri	16·8	Rampore Beauleah ...	21·0	Gya	10·2
Gya	11·6				
Dacca	9·1				
Howrah	3·4				

5. With regard to mortality referable to *Sex*, *Class* and *Age*, the rates of deaths stood as follows :—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	21·0	Christians	19·7	Under 1 year ...	164·8
Females	21·1	Hindus	21·8	1 and under 5 years ...	31·7
Ratio of male deaths to every 100 female deaths	107	Mahomedans ...	19·2	5 " 10 " ...	17·8
				10 " 15 " ...	8·6
				15 " 20 " ...	11·5
				20 " 30 " ...	11·7
				30 " 40 " ...	10·3
				40 " 50 " ...	17·7
				50 " 60 " ...	20·6
				60 years and upwards ...	51·8

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 6*th May* 1889.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 20th April 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

INCREASES.

	Tons.
Coal	2,065
For railway purposes and B. C. F. services at Nawapara and Khoolna.	
Jute	369
One half of the above increase was in local booking from Khoolna, the remaining half was contributed by Muslandpur, Jhikargachi, Singhia and Nawapara.	
Sugar	324
About two-thirds contributed by Jhikargachi, due to an improved market.	

DECREASES.

Rice	771
There was a decrease of over 600 tons in local booking from Khoolna, due to generally poor outturn in the district.	
Betelnuts	257
The decrease in this commodity is from Khoolna, and in through traffic from the Bengal Central Flotilla, viâ Khoolna.	
The traffic is coming into Calcutta by river, the Bengal Central Flotila running direct boats in preference to giving this railway the traffic at Khoolna.	

CALCUTTA, *the* 30*th* *April* 1889.

INCREASE.

	Tons.
Provisions—	
(3) Others	20
This increase is due to greater imports of potatoes.	
Railway plant and rolling-stock	80
This increase is due to more materials carried during this month.	
Oilseeds—	
(1) Linseed	39
This increase is due to greater imports from foreign Railways for high price in the local market.	
Stone and lime	16
This increase is due to greater imports for building purposes.	

DECREASE.

Coal	467
This decrease is due to previous stock not being exhausted.	
Cotton piece-goods—	
(1) European	22
This is due to less demand.	
Grains—	
(2) Rice	893
(6) Others	30
The decrease under these heads is due to less exports from intermediate stations, owing to high price in local market.	
Salt	21
This decrease is due to previous stock not being exhausted.	
Oilseeds—	
(2) Mustard and rape	127
(6) Others	39
The decrease under these heads is due to dull market.	
Silk, raw—	
(2) Indian	23
This is due to dull market.	

The 1st *May* 1889.

S. FINNEY,
Manager, Nalhati State Railway.

CONTENTS.

RESOLUTION ON THE REPORT ON THE WORKING OF THE CHITTAGONG HILL TRACTS POLICE FOR 1888.

POLITICAL.

Calcutta, the 10th May 1889.

READ—

Letter No. 51HP—VI-2, dated Chittagong, the 12th March 1889, and enclosure, from the Commissioner of Chittagong, submitting the departmental report on the working of the police of the Chittagong Hill Tracts for the year 1888.

Read also—

The Report for 1887 and the Resolution recorded thereon.

The submission of this report has been somewhat delayed, but the very heavy work entailed on Mr. Murray by the despatch of a military expedition to the Chittagong Hill Tracts sufficiently explains this. The presence of troops in the district has caused constant changes in the disposition of the Frontier Police; consequently the position of the police on 31st December was purely temporary.

2. The force was maintained at its former strength of 539 throughout the year, at the close of which there were 18 vacancies as against 19 on 31st December 1887. 44 Goorkhas were enlisted during the year. The recruiting party sent to Chumparun failed to enlist the full number of 50 owing to the order prohibiting the enlistment of Muggurs and Gurungs.

3. Rupees 430 out of a sanctioned grant of Rs. 570 for scouts were expended in rewarding hillmen for assistance rendered by them in the pursuit and detection of those concerned in the late raids within our frontier.

4. It is unfortunate that the District Superintendent of Police should not have found himself able to exercise proper supervision over the firing practice of his men. This is a matter to which the Lieutenant-Governor attaches very great importance.

5. The numbers of those who have been struck off the roll after expiration of leave have again increased, and it has been found that the attempt made by the Government to induce and assist men to return, by giving them free passes by rail and steamer, has not so far been successful. The system has been modified, as now only men actually returning from leave will be reimbursed the price of their railway and steamer journeys. After a year's trial it will be determined whether this concession should be continued or not.

6. The health of the force has been bad throughout the year, and the numbers of sick in hospital and the rate of mortality have increased, as compared with last year. This is partly due to an epidemic of cholera which caused nine deaths, there being 45 admissions into hospital for cholera as against 2 in 1887 and 6 in 1886. The figures below give a comparative statement for the last three years:—

	1886.	1887.	1888.
Deaths	19	14	27
Admissions into hospital	2,409	2,361	2,609
Daily average of sick	44	52	53

7. The carriage of provisions, baggage and stores by a Coolie Corps has been abandoned, as it is said to have been found more costly than the old contract system, besides adding considerably to the duties of the police, owing to their responsibility for the conveyance and guard of every package that had to be transported. The former system has therefore been reverted to, and rates fixed for the season. There are still, however, some coolies employed directly under Government in the making of roads, including a party of 168 Sonthals imported during the past year, who are said to have proved themselves excellent workers, and to be desirous of bringing their wives and children to settle in the district.

8. The civil police are mainly occupied with work elsewhere done by peons, as there is no other establishment available in the Chittagong Hill Tracts. As there is very little crime, this does not interfere with the primary duties of the force, and in the peculiar circumstances of the Tracts, it is found desirable to have one establishment for all purposes.

9. In paragraph 20 an account is given of the raids on the frontier, and of the duties in which the men of the Frontier Police were engaged during the past year; but as these subjects have been dealt with fully in special reports and orders; it is needless to discuss them in detail here. It may be remarked, however, that the experience of the year has shown conclusively that the arrangements made hitherto for the protection of the frontier have been wholly inadequate to prevent the commission of outrages by the Hill Tribes beyond, and that a radical change of policy has now become a necessity.

10. At the same time the Lieutenant-Governor highly appreciates the promptitude and energy with which the perpetrators of the various outrages were pursued and the good service done by the portion subsequently employed with the Lushai Expeditionary Force. He continues to hear on all sides expressions of approval of the very excellent work of the officers and men of the Frontier Police. In the very arduous labours that have lately fallen to their share they have never been found wanting in a single material point, and it is a matter for congratulation that the Government should have ready to hand for the peculiar work of the Chittagong Hill Tracts so efficient and loyal a body of men. In conclusion Sir Steuart Bayley wishes to take this opportunity of recording his high appreciation of the ability, energy, and zeal displayed by the District Superintendent Mr. C. S. Murray in conducting the very arduous duties which devolved on him during the year.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Commissioner of the Chittagong Division for information.

Ordered also that the Resolution be published in the *Gazette*.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Chief Secretary to the Govt. of Bengal.

RESOLUTION ON THE REPORT OF THE HEALTH OFFICER OF THE PORT OF CALCUTTA FOR THE YEAR 1888.

No. 1061Marine.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

MARINE.

Dated Calcutta, the 13th May 1889.

RESOLUTION.

READ—

A letter No. 2322, dated the 28th March 1889, from the Sanitary Commissioner, Bengal, submitting the report of the Health Officer of the Port of Calcutta for the year 1888.

Establishment.

DR. LYNCH was the Health Officer of the Port of Calcutta from the commencement of the year up to the 3rd July, when he retired from the service, and was succeeded by Dr. Vincent Richards, who has submitted the present report. In 1885, the Health Officer requested that he might be supplied with a "bolio" in place of the "dinghy" which he had theretofore used, and one was given to him. It was then reported that the new boat was unsuitable, and the Port Officer's "bolio" being available, it was made over in August 1888 to the Health Officer, who thought it would suit him. Dr. Richards now states that this boat also is unsuitable for his use, and asks that a boat similar to those used by the Custom House Officers may be supplied to him. The Port Officer of Calcutta will be requested to obtain and submit an estimate of the cost of a boat such as Dr. Richards considers to be necessary for his use.

Inspections.

2. The report shows that 1,464 vessels were inspected during the year against 1,601 in 1887. The decrease is due to the less frequent inspection of coasting steamers which arrive at the port many times in the course of the year, and which it is not considered necessary to inspect at each return visit, as they have to be visited for the purpose of furnishing bills of health on their departure, which generally takes place within a few days of their arrival.

Dr. Richards brings to notice the insufficiency of accommodation provided for crews in many of the iron built vessels visiting this port, and states that little attention is paid to the ventilation necessary for their health. The Government of India will be requested to ask the Secretary of State to move the Board of Trade to communicate with ship-owners on this subject.

Sickness and mortality among European seamen.

3. The daily average number of European seamen in the port was 1,510 against 1,893 in 1887. The health of the seamen was not so good as in the previous year. Including deaths out of hospital, the death-rates per mille of the last five years were as follows:—

	Cholera.	Other diseases.	Total.
1884	21·96	41·57	63·53
1885	4·72	25·99	30·71
1886	11·61	33 53	45 14
1887	10·03	16·91	26 94
1888	10·59	27·15	37·74

The total number of casualties from all causes amounted to 57 against 51 in the previous year. It has, however, to be observed that there were eight deaths from sunstroke against four in the previous year, the larger number being due to the exceptional weather of last June. It is satisfactory to notice that the death-rate from cholera during the year compares favourably with the quinquennial mean.

The Health Officer complains that timely notice is not given to him of the occurrence of cholera on board ships, and that as a consequence the opportunity for making satisfactory enquiry is lost. The Sanitary Commissioner will asked to report what rule the Health Officer would propose to meet the necessities of the case.

There were six deaths of Europeans from drowning, three of which occurred at the jetties. Dr. Richards suggests that there should be a hand-rail on each side of the landing stage. The Port Commissioners will be asked to consider and report on his suggestion.

Deaths at sea.

At sea there were 35 deaths among the European seamen against 47 during the previous year.

4. The number of European seamen admitted into hospital on account of venereal disease was less than that of the previous year, though there was a slightly higher admission-rate per mille of population. The following table shows the admissions into hospital since 1883:—

Venereal disease.

	Total admissions.	Rate per thousand.
1883	237	127·4
1884	184	109·2
1885	170	100·4
1886	417	179·2
1887	228	120·4
1888	183	121·1

5. Scurvy appears to be steadily decreasing. The number of persons admitted into hospital suffering from this disease amounted to 13, 17, 4 and 3, respectively, during the last four years. The three cases that occurred during the year were not due to the supply of any inferior kind of food or antiscorbutics to the seamen.

6. The Sanitary Commissioner, in submitting the report of the Health Officer for the year 1887, stated that the number of the native population on the river, according to the census of 1881, viz. 25,000, was below the actual number constantly found, and represented that a correct day census of the native river population was necessary for the purpose of arriving at the correct rate of mortality among them. The subject has during the past year received the Lieutenant-Governor's consideration; but having in view the difficulty and expense that would be incurred in taking the proposed census, His Honour has decided not to take any action at present in this direction.

Sickness and mortality among the native floating population.

The following table shows the mortality recorded from all causes among the native river population, the averages being calculated on a population of 25,000:—

	Total deaths. 1888.	Total deaths. 1887.	Ratio per mille.— 1888.	Ratio per mille.— 1887.
Cholera	95	49	3·7	1·91
Bowel-complaints	7	6	·27	·23
Fever, malarious	22	... ...	·85	·85
Ditto, simple	... ...	22		
Other diseases	24	21	·96	·81
Total ..	148	98	5·78	3·82

The above figures show that the health of the native river population, like that of the European population, was not so good in 1888 as it was in the previous year. The figures are, however, in neither case very reliable.

7. The total death-rate among the lascar crews on the river was 1·6 per 1,000 against 4·04 per 1,000 in 1887. No complaints were made by lascar crews during the year.

Lascar crews.

8. Two ships arrived during the year with pilgrims on board, in one of which there were three cases of small-pox. In his report on the health of the port for the year 1887, the Health Officer stated that considerable difficulty was experienced in enforcing the provisions of the Compulsory Vaccination Act on vessels arriving with cases of small-pox on board, and suggested that a landing stage and depôt in a suitable place with shelter-sheds might be erected where pilgrims could be detained for the purpose of being vaccinated. To act on the Health Officer's proposal would necessitate an amendment of the law, and the matter is still under the consideration of the Lieutenant-Governor.

Pilgrims.

The Sanitary Commissioner will be requested to make a separate report on the proposal to compel unprotected pilgrims to be vaccinated before they are permitted to proceed on a pilgrimage by sea.

9. There has been a general improvement in the conservancy of the foreshore of the river. But the sewer on the Howrah side, which drains a large portion of

Conservancy. Sanitary defects.

Howrah into the river, continues to cause a serious nuisance. The drain forms a part of the general drainage of the town of Howrah, and was included in a scheme which was sanctioned in 1881. In the interests of the shipping, as well as in the general interests of sanitation, it is desirable that the town of Howrah should have a proper system of drainage and water-supply. The attention of the Municipal Commissioners of Howrah has been drawn to the defective system of drainage in the town, and they have expressed their intention of preparing a comprehensive scheme for the draining of the town away from the river. The Commissioners have been urged to lose no time in carrying out this project.

Dr. Richards complains of the public nuisance caused at the jetties by persons in the employ of the Port Commissioners resorting to the foreshore beneath the jetties for the purposes of nature. He says that the latrine accommodation provided by the Commissioners is not sufficient for the large number of labourers and workmen employed at the jetties. The Sanitary Commissioner, in his letter No. 1267, dated the 15th February 1889, reported that in his opinion the latrine accommodation within the jetty enclosures was quite sufficient. He will be requested to make a further report on the subject.

Dr. Richards states that the complaints made in the previous year's report in regard to the latrines of the British India Steam Navigation Company in their workshops at Howrah have not received the attention they deserved on the part of the Company. The Agents of the Company were addressed by Government on the subject, but they did not admit that any nuisance was caused by their drains. The Sanitary Commissioner has been asked for further particulars on the subject.

The Health Officer draws attention to the outflow of liquid sewage from Fort William into the river, which has long been a source of nuisance to the shipping, and the public using the Strand Road. Representations on this subject were made last year to the Government of India, in the Military Department, and at the request of that Government a scheme is now under preparation for the discharge of the Fort sewage into the Calcutta sewers. The Lieutenant-Governor hopes that the Government of India will find it possible to carry out the scheme during the present year.

Dr. Richards also alludes to the unsatisfactory state of Kassi Mitter's burning ghât, and suggests that steps should be taken to screen it from the public gaze, and to divert the drainage of the locality away from the river into which it flows at present. The Corporation of Calcutta will be addressed on the subject, and steps will be taken to remedy the evil complained of.

Corpses and carcasses floating in the river.

10. The Lieutenant-Governor is glad to notice that during the year under review there was a marked decrease in the number of corpses and carcasses found floating in the river.

Water-supply.

11. No complaint regarding the supply of water was received from the shipping during the year, but Dr. Richards is of opinion that the construction of the water-boats is objectionable, and that even the new one supplied by the Calcutta Corporation is faulty in this respect. He thinks that the boats of the British India Steam Navigation Company for the supply of water to their fleet are excellent, and that it would be a great benefit to the shipping in the river if the Municipal Commissioners provided similar ones. The Corporation of Calcutta will be addressed on this subject.

Conclusion.

12. The Lieutenant-Governor endorses the commendation bestowed upon Dr. Richards by the Sanitary Commissioner for the energy and efficiency displayed by him in the performance of his duties. His Honour also notices with pleasure that the Native Sanitary Inspector, Babu Nanda Lal Haldar, has performed his duties satisfactorily.

By order of the Lieutenant-Governor of Bengal,

W. B. BESTIC,

Under-Secretary to the Govt. of Bengal.

CALCUTTA MUNICIPAL ELECTIONS, 1889.

No. M 1/1—A34, dated Calcutta, the 14th May 1889.

From—C. Cuthbertson, Esq., Offg. Secretary to the Government of Bengal, Municipal Department,

To—The Chairman of the Corporation of the Town of Calcutta.

I am directed to acknowledge the receipt of your letter No. 1004, dated the 15th April 1889, reporting on the Municipal elections held in Calcutta and the amalgamated portions of the Suburbs on the 15th March.

2. In reply, I am directed to convey to you the thanks of the Lieutenant-Governor for your interesting report, and to say that His Honour accepts your view that, considering the novelty of the arrangements, and the exceedingly defective state of the old register of owners which the new system is specially designed to remedy (but which formed unavoidably the basis of the first election), the proceedings were carried out with as much success as could be expected, and the actual arrangements at the polling booths worked with exceptionally little friction or difficulty.

3. The Lieutenant-Governor approves the proposals contained in paragraphs 14 and 29 of your report, that the duty of correcting the occupiers' list should in future be undertaken by the Municipality, and that the name of the person representing a firm for voting purposes should be ascertained at the time of granting a license to it.

4. With reference to paragraph 33 of your report, I am to request that you will be so good as to submit, for the consideration of the Lieutenant-Governor, a draft of the rule which you would propose to substitute for rule 11 of the election rules.

No. 1004, dated Calcutta, the 15th April 1889.

From—The Hon'ble Sir Henry Harrison, c. s., Chairman of the Corporation of the Town of Calcutta,

To—The Secretary to the Government of Bengal.

I have the honour to submit the following report on the elections held in Calcutta and the amalgamated portions of the Suburbs on the 15th March 1889.

Changes made by new Act in system of voting.

2. As this is the first election under a new system, and as, moreover, it is the first occasion on which personal voting at the polls has been requisite, it seems desirable to explain briefly the changes made by the new law in order that their success may be fairly gauged. This is the more desirable because from the complaints which have been generally made as to the obsolete character of the lists prepared, it is evident that the objections to the old system are very little realised, while the remedies which the present law applies are mistaken for the disease which they so clearly reveal.

3. Under the law hitherto in force, the Chairman had only a passive part in the preparation of the list of electors. The section in point (18) is thus worded—"Any person qualified to vote at an election or to be elected as a Commissioner may, at any time not being less than six weeks or more than three months before the election takes place, apply, personally or by letter to the Chairman of the Corporation for registration of his name as such voter or person as aforesaid, &c."

And the one qualification for voting was to be a male person resident in Calcutta of full age who had paid Rs. 25 rates and taxes during the year preceding the election (Sections 7 and 8).

Objections to former system.

4. The result of these sections was to place the election entirely in the hands of the electioneering agents. Scarcely a single person came forward of himself to ask to be entered on the list, while the electioneering agents went round and collected the names of all those who would vote for them and (till the practice was changed by me at the 3rd election) got the voting papers made over to them in return. These they kept in their hands, had them filled up at their leisure by the voters, and returned them to the polling officer at the day of election. The abuse was apparent on the face of these proceedings and constituted a very grave defect in the old law, but besides this there was the insuperable difficulty that the Chairman had no means of knowing who had and who had not paid Rs. 25 rates and taxes, so that for all practical purposes, it was necessary to

take assertion for proof. The bulk of the payments are rates, and the rate bills both for owners and occupiers are made out according to the assessment register. Had the assessment register been accurate, the claim might have been tested by reference to it; but it was notoriously so obsolete owing to the failure of owners or occupiers to register, that the Office could not report who had paid, but only that the rates had been paid. Hence a system grew up, which I several times referred to in Council, of applying for votes according to the amount paid. If a house paid Rs. 80 in rates, it would cover 3 votes; if Rs. 240, 9; if Rs. 500, 20 votes. Accordingly, the electioneering agents often arranged the families according to the rates. It was a family of 3, 9, or 12 persons, according to the number which the rates would cover, and there were no means of testing the statements made. The register only bore the name of (say) the grandfather dead long ago, and in his name all the rate bills were made out. In one case, which attracted my attention specially, 29 persons claimed to vote as joint-owners and occupiers of one house.

The same difficulty occurred in respect of firms taking out licenses. Such firms exist in hundreds, in Burra Bazar, two names being joined together, which often are quite different from the real persons managing the business. It was argued that if two partners paid Rs. 50, each paid Rs. 25; but, by the same argument, if two paid Rs. 25, or three paid Rs. 50, none could vote. Therefore, if the sum paid was Rs. 25, one person claimed under it; if Rs. 50, two persons; if Rs. 100, three or four, and there were no possible means of checking the correctness of the allegations made

Remedies.

5. To remedy these evils which reduced the voting qualification almost to a farce, the new Act provided that lists of owners, occupiers, and license-holders should be prepared according to the Office registers. By this provision not only would the necessity of applying on the part of the rate-payer be dispensed with, but also the inaccurate character of the assessment book would be brought prominently to notice, owners who wished to vote would be compelled to register, and the evil be remedied. The irregular practice of splitting up qualifications was replaced by a regulated system of plural voting As regards the qualifications for voting, it was not at first intended to go further than owners, occupiers, license-holders, and payers of carriage and horse tax, but as it was represented that a great many persons who had hitherto voted would be thereby disenfranchised, a saving clause was introduced allowing persons who paid Rs. 24 rates and taxes in the aggregate to vote as heretofore, provided—(1) that they applied to be entered on the list, and (2) that they paid in their own name and on their own sole account.

6. The annual valuation fixed by the law as giving a vote to an owner or occupier was Rs. 300. This would ordinarily entail a payment of at least Rs. 24 a year in rates alone, but it was pointed out that if a person was both owner and occupier of a smaller house, he would still usually pay that amount. Another qualification was therefore added to the Bill in Committee, that those who both owned and occupied houses valued at Rs. 150 and upwards should also be entitled to a vote, but they also, as in the previous Act, must apply for it. One further provision of the new law ought to be noticed. It might be possible for the polling officer on the day of election to judge who was the right person to represent the Great Eastern Hotel or any other large and well known European place of business, but it was quite impossible to impose upon him this duty with regard to the hundreds of petty firms of Burra Bazar. It was therefore necessary to ascertain in some way beforehand and enter in the list the names of the authorised representatives of each firm. Section 24 therefore provided that a letter should be sent not less than 30 days before the Election to every Hindoo joint family, company, firm, and other association of persons entitled to vote, requesting them to fill in a form to accompany such letter, with the name of the person authorised to vote on their behalf.

Detail of qualifications under new Act.

7. The qualifications under the new Act may therefore be thus summarised:—

(a) Major qualifications—

(1) Owner of a house valued at Rs. 300 a year and upwards.
(2) Occupier of ditto ditto.
(3) Holder of a license of Rs. 25 a year or upwards.

List of persons thus qualified were to be prepared by the Chairman from his Office registers, and votes could be added together up to a maximum of

12; names omitted or wrongly entered might form the subject of claim or objection.

(*b*) Minor or saving qualifications—

(1) Owing *and* also occupying house of Rs. 150—299.

(2) Paying at least Rs. 24 as rates and taxes in the aggregate.

As these were only inserted in the law in order not to disenfranchise existing voters, the provision requiring them to apply to have their names added to the list was retained, and the votes could not be added to votes under other qualifications.

8. One word more before describing the proceedings. The Bill was drafted and passed through Committee on the assumption that for the first year the old Commissioners would continue in office, and the elections take place after the new machinery had been working for at least 9 months. This was altered in Council, not indeed against my advice, but with a clear and definite warning by me that we should have to conduct the election without having that control over all the registers and statistics which a certain period of working would give us. It is but fair and reasonable to bear this in mind.

Ownership.

9. I now proceed to a description of the manner in which the new machinery worked. The most important qualification perhaps is that of ownership, and as it is the obsolete character of the lift of owners and occupiers, which is one of the special indictments brought by the public against these elections, I think it will be easy to show that here the fault has been found with the remedy rather than as it should have been with the disease. The existing law (section 108) provides for the maintenance of an assessment book which shall contain *inter alia* the name of the owner and the name of the occupier of each property. It is of the essence of good Municipal administration that a book of this kind should be accurate, at least as far as owners are concerned. It is vitally important to the Corporation to know who are the persons to whom they have to look for the proper and rational management of the property under their administration. At the same time it was notorious that so far from being accurate, the present register was grossly inaccurate. Many owners, not always perhaps unintentionally, had taken no steps whatsoever to get their names registered, and therefore one of the special objects of the present law has been to make the inducements to registration such that in future owners would as a rule register. In many respects they are penalised in small ways for non-registration, and one of the penalties which is designedly attached to failure to register, is the loss of a vote at the elections; this is conferred (*vide* section 21) not on all owners as such, but on all owners who have registered themseles as such. It is therefore most unreasonable to urge as a defect in the present Act the very defect in the pre-existing state of things, which the new Act is designed to remedy. The extent to which dead persons and persons who have left Calcutta have appeared in the electoral lists, furnishes conclusive evidence of the extreme inaccuracy of the register of owners, and of the urgent need of rectifying it. It shows also how impossible it has been hitherto to check claims to votes on account of rates paid.

10. Whether or not it is fair to owners to penalise them for non-registration by the loss of the owner's vote is another matter. To my mind it most certainly is; one of the avowed objects of the present law has been to bring into greater prominence the duties of owners as contrasted with their rights, and those who will not discharge one of the most obvious duties of ownership have no right to complain if they thereby lose its privileges.

11. So far as was consistent with the maintenance of this principle, every possible precaution was taken to warn owners of the necessity of registering their names and amending the register. In the October to December quarter a printed notice *vide* annexure A) was circulated with the rate bills to all the owners in Calcutta warning them of this necessity, with a form attached for them to fill up and return. Moreover, the ordinary precautions against a hasty mutation of names were temporarily suspended on purpose to facilitate registration. An order was given by me directing the Assessor on application to register at once temporarily, informing the applicant that for voting purposes his name was entered in the assessment book, but that he must, within a specified period after the election, produce the usual evidence, otherwise it would be removed again.

12. About 5,000 of these forms were circulated by the collecting sircars, and 1,500 covering 3,200 houses were filled in and returned. That the regis-

ters, even after these corrections had been made, were almost ludicrously inaccurate, shows what a large number of owners who ought to have registered long ago, or at least ought to have filled up and returned the forms, would not take the trouble to do so. I must submit that people who will not even take the trouble to fill up a form left at their door, in order to remedy a defect of their own making, have no right afterwards to complain of the omission of their name from the list of voters, or of the insertion of an obsolete name instead of it. In a case of this kind it is neither fair nor just to overlook the enormous good which this salutary provision of the Act has effected as compared with the mere superficial harm that has resulted. How have the elections been in any way injured or invalidated by the inclusion in the list of a number of persons who are long since dead? The real evil was not the publication of those names, but the fact that they were the only owners of whom the Corporation knew anything, and I have very little doubt that the improvement in this respect which will result from the election will be very great. Henceforth the assessment book will be a reality.

Occupancy.

13. The case of occupiers is recognised by the Act as different. It can hardly be expected of a temporary occupant that he should register his name in the books of the Municipality, and therefore the law (section 21) allows an occupier's name to be inserted in the roll of voters if he can satisfy the Chairman that he has paid the rates as occupier for the quarter immediately preceding the elections. This provision was utilised in a very liberal way. The occupiers' list, as taken from the registers, was almost as imperfect as that of the owners, but evidence was freely admitted to have a new name entered on the roll of voters.

14. The result was that every occupier whose name was registered as such has been given his votes, as well as every occupier who took the trouble to apply in time for entry of his name, but the large number who were neither registered nor cared to apply were omitted. It has been said, however, that it is too much to expect a person to apply, and that in England he is registered without applying. This is very likely correct, but it should be recollected that, under the law hitherto in force in Calcutta, application was obligatory; it is hardly fair, therefore, to blame the new law for not introducing every improvement at once. I am now inclined to think that we ought to correct the occupiers' register ourselves. No question of proprietary right being involved, there will be no serious objection to names of occupiers being changed on insufficient or even incorrect grounds, and I have accordingly taken steps to have the names of occupiers continuously ascertained in future by our collecting establishments, and reported to the Assessor for entry in his assessment book.

License.

15. The third qualification which according to the new law entitles to a vote without any application is paying a trade or profession license. The list of these voters was easily prepared, though there was some difficulty in identifying them with the owners and occupiers of the same name and amalgamating their votes. A very large number of lawyers, however, took out their licenses from the High Court and Small Cause Court, giving no other residence. Their names therefore at first appeared as voters in ward No. 12, but as a section of the law had been expressly drafted to prevent their swamping the electors of that ward, they had to be struck out, but were warned by advertisement that if they wished to vote in the wards in which they resided or paid rates, their names would be entered in the rolls for those wards on receipt of an intimation from them stating their place of residence.

16. Many of them availed themselves of this notice, and on the whole the part of the list which contained the names of licensees, was, I think, the most accurate. The total number of persons shown in the first list as qualified to vote under the three heads of owners, occupiers and licensees, was 14,090, the details of which, ward by ward, will be seen in annexure B

Saving qualifications.

17. It was the express intention of the Act that the remaining qualifications, viz., owning and occupying a house of between Rs. 150 and Rs. 300, paying Rs. 24 carriage and horse tax, or paying Rs. 24 rates and taxes in all, should only apply to those who claimed under them. None of these names, therefore, appeared in the first list, but the provisions of section 21, authorizing them to apply, were duly pointed out in publishing the list. When the 15 days' time allowed by law had expired, it was found that in all 4,295 applications had been received, of which

1,141 were under these special qualifications, and 3,154 referred to errors and omissions in the list. Annexure B will show the details of these ward by ward.

18. The next important stage was the conversion of the names of joint families, companies, firms, and associations into those of the individuals who were to represent them at the polls, already referred to in paragraph 6. Section 24 provides that a form shall be sent to the address of all such companies, &c., for them to fill up and return with the name of their selected representative. These were duly sent out to the number of 2,716, but of these only 1,362 were returned. Hence a difficulty arose as to what was to be done with the remainder. It was impossible to leave it to the discretion of the polling officer to determine whether the person claiming to vote was or was not the authorised representative of a company or firm. It was therefore considered best to omit from the revised list all joint families, companies, firms, and other associations of persons who had not returned the form sent to them. It was hoped that if any of them did value the privilege of voting, they would apply for the restoration of their names after the appearance of the revised list, and if they did not do so, it might be assumed that they did not value a vote, and that there was no harm in excising their names. As regards the case under this section in the High Court, I refer to it further on.

Pluralities.

19. The revised list appeared in due course and contained 11,664 names. It was received with almost as little interest as the first list, except on the part of the intending candidates and their agents. Under the rules made by Government (*vide* annexure C), objections might be taken to this list on the score of the person named in it being dead, a woman, or a minor, or of the name being a duplicate of another name, or of the representative of a firm or company being wrongly authorised. In all 1,711 objections were taken between the 1st and 14th of March, which have been since disposed of. By these preliminary measures, all the irregularities and the anomalies which have characterised previous elections were eliminated on this occasion, and the polling officers found themselves in possession of a clear list of single names, in dealing with which their task was the comparatively easy one of guarding against wrongful personation. The polling therefore passed off with the most complete regularity so far as the official machinery was concerned. I visited all the polling stations in the town except one during the progress of the poll, and nowhere was there any difficulty or embarrassment to be adjusted or put straight. This does not refer to the artifices of the candidates and their agents, which are, of course, not under our control. A few complaints were received of voters being persuaded to change their mind and vote for a different candidate from the one they had promised, and in some cases the polling officers were blamed for not preventing their doing so, but this supposes a duty imposed on these officers which they cannot reasonably be called upon to undertake. All that they can see is that the voter fairly understands who he is voting for, and knows what he is doing; they cannot regulate or control the influences brought to bear upon him either as he comes to the poll or even at the polling table. With these reservations the polling arrangements were everywhere satisfactory, and the proceedings conducted in an orderly and regular manner. In one ward personation was practical to such an extent as to change the apparent result of the election, when the votes were declared invalid; but this was in no way the fault of the polling officer. The candidate against whose interests the personation took place, admitted that the polling officers had neglected to precautions. With this exception the objections taken to votes were very few; these to the number of 87 have since been disposed of. At the same time it is possible to detect one or two openings for fraud which should be guarded against at future elections. These I have referred to further on.

Revised list.

20. As regards going to the polls, all that can be said is that the reluctance to do so was somewhat less than the most extreme opponents of the measure prognosticated; out of a total of 11,664 voters on the revised list, only 3,369 actually voted, but in 6 out of the 25 wards, containing 3,688 voters, there was absolutely no poll, while in several other wards the poll closed early owing to the retirement of the losing candidates; of the remainder a certain percentage must be allowed for persons who are dead or have left Calcutta; still after making every allow-

Personal voting.

ance under these heads, it is evident that a very large number of persons entitled to vote have abstained from doing so.

Plural votes.

21. As regards the system of plural voting, all that I can say is that absolutely no complaints have reached me, and no difficulty has been experienced in working it. I have no doubt that numerous as the abstentions were, they would have been still more numerous, had not the wealthy voters been given more influence than the poorer. In comparing this election with those that have preceded it, it is but fair—(1) to compare it with the first rather than the later elections under the old Act, and (2) to bear in mind that one of the special objects of the new provisions was to place the elections somewhat less exclusively under the control of the wire-pullers and electioneering agents. Apathy on the part of the voting public has been the characteristic feature of all Calcutta, as well as of most other Municipal elections. That such apathy has marred the working of the new machinery to some extent is no argument whatsoever against that machinery unless it can be shown that it did so more rather less than before. This has most certainly not been the case. Under the former law (section 18) any person wishing to vote was required to send an application to have his name entered on the list of voters. The consequence was that the voting lists were almost exclusively made up by the agents of the rival candidates; there was hardly any voting public at all outside those on behalf of whom agents applied. As conclusive evidence of this, it was found at the first election in 1876 that out of 2,228 Europeans and Eurasians who were believed to be qualified to vote only 199 applied, and were included in the voting list. In the present list this number was 2,341, so that whatever the omissions of the present list, they will bear no comparison with those of the first list prepared under the old system.

Simplicity of the English system.

22. It must also be borne in mind that the difficulties of preparing a voting list in Calcutta are far greater that the similar difficulties in English towns. In England only occupiers have votes, and to prepare a correct list of the actual occupiers of each house is a comparatively easy task. In Calcutta, on the other hand, not only are owners entitled to vote but also licensees, and other persons who pay Rs. 24 annual taxation under all heads. To prepare a list of owners from any other source except an official register, would be a very dangerous proceeding. Again, the custom of using the names of firms instead of individuals in the business parts of Calcutta, is so deeply engrained in the habits of the people, that it is hardly an exaggeration to say that in the great majority of cases, the real persons who carry on the business are not the ostensible ones. Under such circumstances, polling must have led to inextricable confusion, unless rigorous measures had been taken to fix the vote on a single responsible individual in the finally revised list. It is perhaps to be expected that persons who would not stir a finger to secure a vote, while it was open to them to do so, should afterwards complain if solicited for that vote by the candidates, when it was too late to obtain it, but though one of the newspapers states that the complaints which have reached it have been very numerous indeed, I can only say that those which reached me have been comparatively few, and almost in every instance they have been those of persons whose claims have been barred by their own failure to move at the proper time.

Result of the elections—Small number of Europeans.

23. As regards the result of the elections, disappointment has been expressed in some quarters at the number of Europeans returned being less rather than more than before, and it is assumed without any foundation that the new Act was expected to work in the opposite direction. When new legistation was on the tapis, it was proposed both in the Amalgamation Committee and in Council, as well as by the Hindoo Associations and organs to increase the proportion of elected Commissioners to ⅔ or ¾ This I strenuously opposed, more specially in a note, dated 26th November 1885, appended to the Amalgamation Committee's report, in which I showed that the new suburban wards would tend to increase the Hindoo majority, and strongly protested against any increase in the proportion elected by the wards. But I asserted in the clearest possible terms that this would still leave the Hindoo predominence as it was The argument which I used throughout was this that as many native gentlemen had abundant leisure which they were only too glad to devote to municipal work, while most qualified Europeans had no leisure

and grudged the time which they regarded as wasted over municipal discussions, it was inevitable that the leisured Commissioners must have a large majority, at least on Committees as compared with the busy Commissioners, and that it was best to recognise this and make them feel a sense of responsibility. But a majority would often work very well if it had a substantial minority to face, but badly if that minority was too weak. Therefore care ought to be taken to maintain a substantial European minority.

24. This would be endangered partly by the loss of the third member in the European wards, partly by the addition of the suburban wards which were electing almost a solid phalanx of Hindoos, and the checks introduced into the new Act, besides retaining one-third of the Commissioners for nomination or election by special constituencies, were (1) to have the list of voters drawn up in the office according to qualifications instead of only on applications, and (2) to allow plural votes by which wealthy European voters would get the same weight which wealthy Hindoo voters already got by the indirect method of partnerships and joint families. Have these checks failed? A reference to Annexure D will show that they most certainly have not. The following is a statement of the voters in the town arranged according to nationalities at the four elections under the old Act and at the recent elections:—

Years.	Hindoos.	Mahomedans.	Europeans.	Chinese.	Jews.	Parsees.	Total.
1876	4,556	239	187	3	3	6	4,994
1879	6,025	604	352	2	16	5	7,004
1882 (10,587)	7,314	797	1,017	5	33	14	9,180
1885 (9,548)	7,051	1,005	855	12	35	17	8,975
1889	7,964	1,286	2,340	9	36	29	11,664

It will be seen that while the new system gives the Hindoo voters, includ ing the suburban wards, an increase of only 8 per cent. on the largest number previously obtained, and the Mahomedans an increase of 28 per cent., it gives the Europeans, &c., an increase of 230 per cent.

25. This is as regards the number of voters, but if the voting power due to the plural system is also taken into consideration, the same tabular statement will show that the Europeans who had never before exceeded 11 per cent. of the voters in the town, and who on this occasion were just over 20 per cent, had the power of exercising 11,034 votes out of 46,402 or 24 per cent. Again, if the voters in each ward are examined, it will be seen that the Europeans had voting strength sufficient to return—

1	Commissioner for ward	10
1	ditto	12
1	ditto	13
1	ditto	14
1	ditto	15
2	ditto	16
2	ditto	17
2	ditto	18
1	ditto	19
1	ditto	20
1	ditto	21
1	ditto	24
1	ditto	25

16 Commissioners in all, whereas as a fact they only returned 9.

These figures, I think, show conclusively that had the Europeans organised, the new Act would have fully done all that was expected of it. The fact that several of the European voters were dead in no way affects the result, because at least as large a proportion of native voters were dead, and the dead voter almost in every instance represents a living voter, who could have obtained a vote had he cared to apply for it. It is only where native owners

or occupiers of houses have been succeeded by European owners or occupiers, or the reverse, and that the obsolete character of the list makes any difference, and this would not practically affect the result.

26. Nothing is further from my intention than to find fault with the European community for its inertia. It is obvious that it does not want the elective system. It would much rather have the number of members which are to be regarded as its share of the Corporation fixed by law, as was at first, proposed, and then have those members nominated by Government and the leading European Associations. It cannot be expected that busy men will trouble themselves with looking after their votes at a municipal election, but I do think that as the electoral system has been introduced, and is part of the law of Calcutta, the leading Associations might have combined together to see that the Act was worked properly, that votes were claimed, circulars under section 24 answered, candidates brought forward suitable to the wards for which they stood, and the other measures taken without which no elective machinery can be expected to work In 1865 when it was at first proposed to fix by law the numbers of each community, the proposal was to constitute the Corporation of—

33 Hindoos.
12 Mahomedans.
27 Europeans and others.
72

Had the European votes been made the most, there would on the present occasion have been 16 elected for wards,
10 elected for special constituencies,
6 nominated.
29 out of 75, or rather more than was originally looked upon as the ideal proportion.

27. Annexure E shows the number of persons voting in each ward nationality by nationality; it is only of interest if analysed minutely as owing to there not having been an election in every ward any inference drawn from the totals is fallacious. In general, however, it shows that where an election was held, the Mahomedans were the most ready to go to the poll and the Europeans the most backward.

Other details.

28. Annexure F shews the details of the plural votes; out of 11,664 voters

695	had the maximum of	12 votes
70	ditto	11 „
211	ditto	10 „
155	ditto	9 „
323	ditto	8 „
184	ditto	7 „
724	ditto	6 „
419	ditto	5 „
1,878	ditto	4 „
2,034	ditto	3 „
4,971	the minimum of	2 „

As already said, the plural system worked very well and complicated, as it may have appeared, and, as it was pronounced to be by many critics, no hitch occurred anywhere.

29. Section 24, the section under which all pluralities of persons who have a vote can appoint a representative to vote for them, would, as already said, have worked very well, if all such pluralities had filled up the form sent to them and returned it. Annexure B will show ward by ward the number that did so, the total being 2,716 forms sent and 1,362 or as nearly as possible 50 per cent. returned. Of these 2,716, more than two-thirds were in the four riparian wards, *viz*:—

263 in ward No. 2
325 do. 5
928 do. 7 (Burra Bazar).
327 do. 12 (Dalhousie Square).
1,843

But while out of 1,516 in wards 2, 5 and 7, 991, or 65 per cent. replied, in the European ward No. 12 only 80, out of 327 or less than 25 replied. The Act does not say what is to be done in the case of those who do not reply, and therefore their names were altogether omitted. I propose to meet this in future by ascertaining, at the time of giving a license to each firm, the name of their representative for voting purposes, and entering this name in the list in lieu of such firms as leave the form unfilled up.

Case in High Court.

30. It was in connection with this section that a case was brought before the High Court to set the result of the voting in one ward as declared by me. The rule at first granted was discharged, and the result announced by me sustained, but the Court apparently considered the section defective, because it did not restrict the choice of representatives, allowing a firm therefore to appoint any one disconnected with them, even the agent for a candidate, as their representative. The Judge also did me an injustice if he is correctly reported to have said that I ought to have held my hand and not sent in the list of valid votes until the rule had been heard, as was, if I recollect right, stated in my affidavit. I sent in the list to the *Calcutta Gazette* and posted it up in the office before I heard that a rule was applied for, still less granted.

31. As regard the defect in the law, I submit that, so far from it being a serious blot, it is a defect of the most insignificant kind. Hitherto all voters have been allowed to vote by voting paper, and if the section is abused to the utmost possible extent, it cannot in substance amount to anything more than this that all Hindoo joint families, companies, firms, and other associations will practically be exempted from personal voting. Although had this been distinctly contemplated, it would have caused heart-burning and jealousies. I am by no means certain that it would not be a practical advantage.

General smoothness with which the machinery worked.

32. So far as my testimony goes, which, if the most impartial, is certainly by far the best informed in this matter ; the new system worked with unlooked-for success, considering that it was new and untried. The first list was produced in due course containing over 14,000 names, and if obsolete it was only as obsolete as were the registers it was intended to reproduce; 4,295 objections were received and disposed of by myself, aided to some extent by the Vice-Chairman, with much labour no doubt owing to their prodigious number, but with such success that not a single appeal was made to the Magistrate under section 23. The revised list was brought out in due course, in which, for the first time in any municipal election, every name given was that of a single identifiable individual. The new sections about proposing and seconding worked perfectly, and in the largest ward in the town as well as in 5 others, the expense and labour of taking a poll was saved. In the wards in which a poll did take place, all voters received postcards informing them of the polling station, the number of votes they might give, the names of the candidates and the method of voting. I visited nearly all the polling stations on the day of election, and found none of the confusion or disorder that might have been expected at a first experience. In one ward personation was carried on to some extent, but it cost the candidate, in whose interest it had been practised, his seat.

Government rules worked very well.

33. The rules laid down by Government worked very well as far as my experience goes, but rule No. 11, regarding excess votes, ought on the next occasion to be altered. On the present occasion very few excess votes were given, and the rule worked substantial justice ; but in future elections it would afford a means of withdrawing and cancelling votes which might be resorted to, to the annoyance of voters and candidates. The rule is that if a voter has, say, 5 votes and gives more to different candidates, as many votes are deducted from each candidate as will bring the votes within his voting power. This might and probably will be thus abused. A voter gives 5 votes as promised to the candidate he wishes to vote for. If his voting power is thereby exhausted, he can go without molestation, but if he can still give 4 or 5 votes to another candidate, and perhaps 3 to another, the agents will try and induce him by every possible means to do so, so as to cancel some of the votes

already given. The rule should be that the votes first given count in full. Many means could be arranged of determining which these are—

The extent to which voters try to obilge candidates and their agents is evident from this alone that a great many voters gave an equal number of votes *to every candidates*, in other words, paired against themselves !

34. .I have every reason to hope that by the next election the registers will be very far more correct than at present, chiefly owing to this election and to the loss of many votes which failure to register has entailed. The system will be understood, and it may be hoped that the Associations, Europeans, Hindoos and Mahomedans, will interest themselves in putting forward good candidates and looking after the registration. The objection to personal voting will be much diminished, and the plural system is certain, from the evidence afforded by the present election, to become more and more popular. To my judgment the elections which have just terminated afford the best possible augury of the success of the new system, and this, I think, would be the verdict of every one who has had any experience of contrasting their working with that of the system which they superseded.

ANNEXURE A.

Municipal Election.

All owners of property in Calcutta, wishing to exercise the right of voting at the Election to be held, under the new Act, in March next, are warned that only such Owners, as are registered in the Municipal Registers, will be admitted to vote (see sections 8 and 21). Such, as own property registered in the name of another, are, therefore, hereby warned that they should apply without loss of time for the registration of their names, otherwise their votes will be lost.

For convenience a form of application of registration is attached.

Municipal Office: H. L. Harrison,

The 4th September 1888. *Chairman of the Corporation.*

Form of application for persons desirous of registering their names as OWNERS or OCCUPIERS of premises.

To

The Chairman of the Corporation.

Sir,

I request you will be good enough to register my name as Owner (or Occupier) of house property in Calcutta noted below.

Yours faithfully,

Number and situation of the premises of which applicant is the Owner.	Whether applicant is also the Occupier of the premises. If not, state name of Occupier.	No. of the Ward in which the premises are situated.	Municipal assessment of the premises per annum.	Remarks.

ANNEXURE C.

NOTIFICATION.

The January 1889.—It is hereby notified for general information that, under the power vested in him by section 19 of Act II (B.C.) of 1888, the Lieutenant-Governor has been pleased to prescribe the following rules for the election of the Commissioners for the Town of Calcutta.

Rules under Section 19, *Act II* (*B.C.*) *of* 1888, *which it is proposed to submit to Government for adoption.*

1. The first election of Commissioners under Act II (B.C.) of 1888 shall take place on 15th March 1889.

2. The polling shall take place at such stations as the Chairman may determine as soon as the word for which contests will take place under section 31 are known. Notice of the places fixed upon shall be given by advertisement in the Municipal Office and in at least two daily newspapers not later than the 11th March.

3. The Commissioners of the Town of Calcutta shall appoint a polling officer to preside at each station, and as many assistant polling officers as they may think requisite, and may pay to each officer so appointed such reasonable remuneration for his services as they may think fit.

4. The Chairman shall supply to each polling officer a sufficient number of copies of so much of the list of voters revised in accordance with section 22, Act II (B.C) of 1888, as may relate to the wards for which such polling officer is appointed to take votes, and no vote shall be received by the polling officer or his assistants, unless the name of the voter is entered in such list. The Chairman shall also furnish the polling officer with the names of the candidates for each ward as announced in accordance with section 31 of the above Act, and no vote shall be received in favour of any person other than one of such candidates.

5. All votes must be given at the poll on forms to be provided by the Chairman at the polling stations. Separate forms easily distinguishable shall be provided for each candidate, and the voter, unless he declares himself unable to write, shall write in his own hand, in the presence of the polling officer or one of his assistants, his own name, the name of the candidate for whom he votes, and the number of votes given for him. If he declares himself unable to write, the names and number shall be written at the dictation of the voter by the polling officer or one of his assistants, and such polling officer or assistant shall in that case append his own signature to the form..

6. The Chairman shall circulate to the voters of all wards for which there will be a poll under section 31, a post-card containing in English the name of the voter, the number of votes he is entitled to give, the names of the candidates for his ward, the polling station, and such other directions as the Chairman may think fit; such post-card shall be posted not less than two nor more than seven days before the date of election.

7. The post-card shall also advice the addressee to bring it with him to the poll as a help to identification, and if so brought, it shall be attached to the voting paper.

8. If a voter gives some of his votes to one candidate and others to one or more other candidates, he shall fill up a separate voting paper for each candidate for whom he votes.

9. It shall be the duty of the polling officer or one of his assistants to satisfy himself—

(1) That the name of the voter is entered in the list;

(2) That the voting paper is filled up in the manner prescribed in rule 5;

(3) That the name of the candidate voted for corresponds with the form assigned for such candidate;

(4) That the post-card, if brought by the voter, is attached to his voting paper or one of his voting papers;

(5) That the voter has not given more votes than he is entitled to.

10. No objection shall be taken at the polling station to the name of any voter entered in the list or to the number of votes assigned to him, but if any objection is taken to the identity of any voter, it shall be recorded on the back of the voting paper by the polling officer or his assistant.

11. If any voter gives more votes than he is entitled to, and the mistake escapes detection till after the voter has left the poll, a sufficient equal number of votes shall be deducted from each candidate voted for to bring the number of votes within the number allotted to the voter.

Illustration.—A, being entitled to 6 votes, gives 8 votes to X; 2 shall be deducted.

B, being entitled to 4 votes, gives 5 to X and 3 to Y; 3 votes shall be allowed to X and 1 to Y.

C, being entitled to 7 votes, gives 4 to X, 4 to Y, and 3 to Z; 2 shall be allowed to X, 2 to Y, and 1 to Z, and 2 votes be lost.

12. The polling shall commence at 9 A.M. and close at 6 P.M., and if it cannot be finished for any ward by that hour, it shall be continued on the following day at 9 till finished.

13. The polling officer shall be entrusted with the maintenance of order at the polling station, and all voters shall, while at or near the polling station, comply with all reasonable orders issued by him for the preservation of order.

14. At the close of the poll for each ward, the polling officer shall forward to the Chairman the voting papers which have been received by him duly sealed and secured, sending the voting papers to which objections have been taken separately from those to which no objections have been taken.

15. All claims or objections preferred under section 21 shall be decided by the Chairman ward by ward, and he shall give such notice in the Municipal Office of the date of hearing for each ward as may be practicable. Such hearing shall be conducted with open doors in order that any intending candidates or their agents may be present, and the Chairman shall hear any person present who asks to be heard before disposing of such claim or objection.

16. After the publication of the revised list under section 22, further objections to the list may be taken on the following grounds:—

(*a*) That the voter is dead or is a woman or has not attained the age of 21 years;

(*b*) That the voter is the same as another person whose name is on the list, and ought to appear only once on the list;

(*c*) That the voter, though purporting to be authorised to vote under section 24 on behalf of a Hindu joint family, company, firm, or other association of persons, is not duly authorised;

(*d*) Such objection must be in writing and must be delivered to the Chairman on or before the 14th March.

17. Such objections, as well as all objections under rules 10 or 11, shall be heard by the Chairman after the date of election, and the provisions of rule 15 shall apply to the hearing of the objections.

18. The Chairman shall, as soon as practicable, after disposing of objections under the last preceding rule, published at the Principal Office and in the *Calcutta Gazette*—

(*a*) The names of all candidates elected for wards for which there was no polling as provided in section 24;

(*b*) The names of all candidates for wards for which there has been polling, together with the number of valid votes given for each candidate, and the two candidates who have obtained the majority of valid votes shall be deemed to be duly elected Commissioners.

19. Except as otherwise provided in section 23, the Chairman's decision in all matters connected with the preparation of the list of voters and the validity of votes shall be final for the purposes of the election.

20. The following penalties are imposed for breach of these rules:—

(*a*) For signing a name other than the writer's own name on a voting form under rule 5, or for giving a name other than the voter's own name to the polling officer or assistant polling officer, a fine not exceeding Rs. 200.

(*b*) For intercepting a post-card or intentionally hindering the delivery of a post-card addressed to a voter under rule 6, a fine not exceeding Rs. 100.

(*c*) For taking away a post-card from a voter after it has reached him without his consent, a fine not exceeding Rs. 100.

(*d*) For refusing to obey the reasonable orders or directions of a polling officer under rule 13, a fine not exceeding Rs. 50.

(*e*) For tampering with any voting paper after it has been duly filled up and before the result of the election is declared under rule 18, a fine not exceeding Rs 200.

N. B.—The word Chairman in these rules includes any other officer appointed under sections 27 or 28 of Act II (B.C.) of 1888.

H. J. S. COTTON,

Secretary to the Govt. of Bengal.

* No poll.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 11th May 1889.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.		*Western Districts.*			
Burdwan Divn.	1	Burdwan	May 11, '89	Nil	Weather—excessively hot. Rain urgently wanted. Price of rice 16 seers per rupee at Sudder, 14 seers at Culna, 15 3/16 seers at Cutwa, and 14½ seers at Ranigunge.
	2	Baukoora	" 11, '89	Nil	Weather—very hot. Rain badly wanted. Ploughing stopped in Sudder and much retarded in Bissenpore sub-division. Standing crops withering for want of moisture. Common rice 17½ seers per rupee at Sudder and 17½ seers at Bissenpore.
	3	Birbhum	" 11, '89	Nil	Weather—very hot and dry. No crops to report on. The prolonged absence of rain will scarcely allow of full preparation of the land for next crop. Price of rice stationary in the south of district, with a tendency to rise in the north.
	4	Midnapur	" 11, '89	0·15	Weather—slightly cooler. One slight storm with a little rain. *Boro* rice in Kasijora all reaped, and is a ten-anna crop. Ploughing everywhere interrupted for want of rain. Price of rice still rising.—Midnapur Rs. 2-8 per maund, Contai Rs. 2-10-8, Tumlook Rs. 2-12, and Ghatal Rs. 2-10.
	5	Hooghly	" 11, '89	Nil	Weather—hot with strong breezes from south and south-west. Sowing of early rice and ploughing retarded for want of rain. Price of coarse rice at Sudder Rs. 3-8 per maund, and at Jehanabad Rs. 2-8.
		Serampore	..	0·03	
		Howrah	" 11, '89	Nil	Weather—hot and dry. Rain badly wanted for *amun* cultivation. *Boro dhan* harvest nearly finished. Price of common rice at Sudder is 12 seers and at Ulubariya 13½ seers per rupee.
		Central Districts.			
Presidency Divn.	6	24-Perghs.	May 11,'89	Nil	Weather—very hot, dry and windy; occasionally cloudy. Prospects of crops unfavourable in consequence of continued drought. Sugarcane withering. Ploughing continues. Price of rice varies from 12¾ seers to 15 seers per rupee.
	7	Nuddea	" 11, '89	Nil	Weather—hot with strong south wind. Rain at Kooshtea, Meherpur, and Chooadanga has done much good. Ploughing going on. Indigo and sugarcane are the only crops in the fields. About four annas of early rice have been sown in parts of the Chooadanga sub-division.
		Kooshtea	...	1·24	
		Meherpur	...	0·60	
		Chooadanga	...	0·65	
	8	Khoolna	" 11, '89	Nil	Weather—hot with high wind. *Boro* harvest nearly completed; outturn good in Bagirhat, but bad elsewhere. Rain very much wanted everywhere, and all agricultural work is stopped. The poorer classes are suffering some distress in different parts on account of high prices, and in a group of villages in the Kaliganj thana: the food-supply is said to be insufficient.
	9	Jessore	" 11, '89	0·08	Weather—very hot. South-westerly winds still continue to blow. Rain badly wanted for sowing of *dhan* and jute in the Sudder, Narail, and Bongong sub-divisions. At Magura and in some parts of Jhenidah sowing has commenced. Prices of rice rising.
		Jhenidah	..	0·79	
		Magura	.	0·90	
	10	Moorshedabad	" 11, '89	Nil	Weather—very dry and abnormally hot. Southerly winds; dust-storms with thunder and lightning, but no rain. In consequence of want of rain *aus* rice has not been sown on one anna of the area usually sown with this crop, though the lands have been ploughed and prepared. Rain is much needed for *aus* sowings and for mulberry plants.
		Jungipore		0·39	
Rajshahye Divn.	11	Dinagepur	" 11, '89	Nil	Weather—very hot. Winds shifting from east to west. Jute plants reported to be withering. *Aus dhan* sowings backward. Only about half the usual area of sugarcane planted out. Rain urgently wanted.
	12	Rajshahye	" 11, '89	1·06	Weather—very hot. Sowing retarded for want of rain. Price of rice has fallen a little.
		Nattore	...	0·15	
	13	Rungpore	" 11, '89	0·03	Weather—sultry during the day time, but cool breezes at night. The jute and young rice continue to flourish, but the cry is still for rain. The population is largely dependent on wells, which are running dry, and hence great inconvenience and much disease.
		Kurigram	...	1·13	
	14	Bogra	" 11, '89	Nil	Weather—excessively hot with changing winds. In the middle of the district excessively dry. Rain is wanted in all parts, and in the middle of the district very urgently. The cultivation of rice, jute, and sugarcane is going on, but is in most places sadly retarded by the drought. The prospects of the growing crops are poor. Grass very scarce. There is a good deal of cattle disease in some places. Price of coarse rice risen to 17 seers a rupee.
		Sherpore	...	0·17	
		Nowkhilla	...	0·45	
	15	Pubna	" 11, '89	3·26	Weather—hot and unsettled. Rain fairly general, and prospects of crops improved. More rain wanted.
	16	Darjeeling	" 11, '89	0·70	Weather in Darjeeling vicinity has been extremely boisterous; in the plains very warm and dry. In the hills crops are progressing favourably. In Siliguri about ten annas of the *bhadoi* and jute sowings completed; rain badly wanted.
		Julpigoree	" 11, '89	1·07	Weather—hot and cloudy with east wind. Sowing of jute and paddy still going on. *Kaoni* and *cheena* are being harvested. More rain wanted. Common rice continues to sell at 17 seers a rupee.
		Eastern Districts.			
Dacca Divn.	18	Dacca	May 11, '89	Not given.	Weather—hot and cloudy with high wind. Good rain fell throughout the district. Cultivation of paddy crops still going on. Jute and paddy sown on low lands are thriving. *Boro dhan* nearly harvested; outturn expected to be 8 annas.
	19	Furreedpur	" 11, '89	0·39	Weather—hot and windy. Sowing of *dhan* is retarded for want of rain, and the young plants which have come up are suffering.
	20	Backergunge	" 11, '89	Nil	Weather—hot. Ploughing for *aus dhan* progressing, but *aus* seedlings are suffering for want of rain.
	21	Mymensingh	" 11, '89	0·14	Weather—hot in the day; nights still fairly cool. A storm at Tangail has done some damage. *Aus* and jute sowings nearly completed. Prospects good except in the Jamalpore and Tangail sub-divisions.
		Tangail	...	4·15	

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
Eastern Districts—concld.				
CHITTAGONG DIVN.				
22	Chittagong	May 11, '89	2·66	Weather—hot. A tornado reported from Chikaria in the Cox's Bazar sub-division, accompanied by sparks of fire, which wrecked the thannah and post-office houses, carrying away almirahs, boxes, &c., and depositing them in the river. State of miscellaneous crops fair. Lands are being prepared for *aus* paddy; and in some places it is being sown.
23	Noakholly	...	......	Report not received.
24	Tipperah	„ 11, '89	1·80	Weather—stormy. *Aus dhan* and jute all sown. Sowing of *amun dhan* is being completed. Crops doing well.
25	Chittagong Hill Tracts.	„ 10, '89	1·64	Weather—very sultry. First three days of the week cloudy and slightly rainy with strong south-west gales. Sowing in *jums* still continues, and about 12 annas finished. Gathering of tobacco is now over, but that of chillies still continues.
	Hill Tipperah	„ 11, '89	2·22	Weather—hot and windy with passing clouds. Sowing of *satya* paddy continues. Sugarcane is being planted. More rain wanted. Prices of food-grains rising.
BEHAR				
PATNA DIVN.				
26	Patna	May 11, '89	Nil	Weather—hot and sultry. Threshing and winnowing of *rubbi* crops almost finished. Fields are being prepared for *bhadoi* crops. *Cheena* doing well. *Boro* rice continues to be reaped. Prices of food-grains still rising.
27	Gya	„ 11, '89	Nil	Weather—very hot with strong wind in the day. Sugarcane is being irrigated. Opium weighments and threshing of *rubbi* crops finished. Prices of food-grains rising.
28	Shahabad	„ 11, '89	Nil	Weather—hot with variable winds. Sugarcane is being irrigated. Prices rising somewhat, but supplies of grain in markets plentiful. Large export going on.
29	Durbhunga	„ 11, '89	Nil	Dry weather continues. Easterly winds prevailing. Rain much needed in every part of the district. *Cheena* and *mung* are withering. Ploughing for *bhadoi* crops not progressing. Common rice selling at from 10 to 12¾ seers per rupee.
30	Mozufferpur	„ 11, '89	Nil	Weather—hot with hot winds. Lands are being prepared for *bhadoi*. Rain much wanted.
31	Sarun	„ 11, '89	Nil	Weather—very hot and dry. Rain wanted for *cheena* and indigo.
32	Chumparun	„ 11, '89	Nil	Weather—hot. Rain needed for all crops. Prospects of *cheena* extremely poor. Rice and *mung* are being sown. Prices have risen.
BHAGULPORE DIVN.				
33	Monghyr	„ 11, '89	Nil	Weather—very hot and sultry. Rain urgently wanted everywhere for ploughing. Indigo in the Beguserai sub-division promises well. Common rice selling at 13¼ seers per rupee in the Sudder station.
34	Bhagulpur	„ 11, '89	Nil	Weather—oppressively hot with no signs of rain. The continued drought is causing much anxiety, and prices are rising. In the north the withering of rice and *mung* in the low lands and delay in *bhadoi* sowings make prospects bad. In the south the delay is less serious. Indigo suffering. Sugarcane continues to do well.
35	Purneah	„ 11, '89	Nil	Weather—very hot and dry. There are no crops above ground. Seed that has been sown is dying for want of rain.
36	Maldah	„ 11, '89	Nil	Weather—hot and oppressive. Harvesting of *boro* paddy continues. Rain badly wanted for *bhadoi* rice, jute, and indigo, which are all withering for want of moisture. *Jali dhan* is being sown in the low lands. Prices of rice rising everywhere.
37	Sonthal Perghs.	„ 11, '89	Nil	Weather—intensely hot. Rain wanted everywhere. Sugarcane suffering from want of it. Estimated outturn of *boro dhan* reported from Rajmehal is about 14 annas. Prices show a tendency to rise. Relief works going on in Godda and Jamtara sub-divisions; large numbers flocking to latter work.
	Pakour	...	0·22	
ORISSA.				
ORISSA DIVN.				
38	Cuttack	„ 11, '89	Nil	Weather—dry but windy. Ploughing for *beali* and *sarad* rice delayed for want of rain. Harvesting of *dalua* rice over. Common rice sells at 14 seers 7 chittacks per rupee in town.
39	Pooree	„ 10, '89	Nil	Weather—seasonable. Rain is wanted for ploughing the lands for the ensuing *sarad* crops. Price of common rice varies from 21 seers to 14¼ seers in the Sudder sub-division and from 15¾ seers to 13 seers 2 chittacks in the Khoorda sub-division. Price of *kulthi* has also risen lately. The material condition of the poorer classes, who cannot get sufficient work, is beginning to cause anxiety.
40	Balasore	„ 10, '89	1·04	Weather—cooler at head-quarters, but very hot at Bhudruck. The rainfall has been very partial. Cultivation in the north of the district and in Bhudruck at a standstill for want of rain. Prices still rising.
CHOTA NAGPORE.				
South-West Frontier Agency				
CHOTA NAGPORE DIVN.				
41	Hazaribagh	May 11, '89	Nil	Weather—bright and intensely hot. Sugarcane reported to have been injured in places by the excessive heat and want of moisture. Rain wanted for ploughing. Prices stationary.
42	Lohardugga	„ 10, '89	Nil	Weather—very hot. The only crop on the ground is *tewa dhan* at head-quarters. Fields for cotton are in the course of preparation. Sugarcane doing well in the sub-division.
43	Singbhoom	„ 11, '89	Nil	Weather—intensely hot. Sugarcane thriving. Lac cultivation commenced and progressed to an extent of about eight annas.
44	Manbhoom	„ 11, '89	Nil	Weather—intensely hot. No crops on the ground except sugarcane. Great want of water throughout the district. Price of rice rising; it now sells from 14 to 20 seers the rupee. Outturn of *kusmi* lac from 6 to 8 annas.

Published for general information.

CALCUTTA; REVENUE DEPT.,
The 14th May 1889.

P. NOLAN,
Secy. to the Govt. of Bengal.

The following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the Interior during the month of February, 1889.

	%
The mean relative humidity	71
The average relative humidity of the corresponding period for 24 years, S.-G.'s Office	74
	Inches.
The total fall of rain from 5th to 11th May 1889	Nil
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	1·02
The total fall from 1st January to 11th May 1889	4·85
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	6·27

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

A. Pedler,
For Offg. Meteorological Reporter to the Govt. of India.

Meteorological Office, Govt. of India;
Calcutta, the 13th May 1889.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF APRIL 1889.

The month of April in Bengal is noticeable as being almost the hottest of the whole year, and it is usually characterised by steadily increasing temperature, with decreasing pressure, the decreasing pressure being brought about by a series of oscillations, in which the downward movement is greater than the upward. Hot weather storms or nor'-westers are generally rather frequent in this month. For some days before they occur the barometer falls streadily, and sometimes largely in Bengal, and probably over Northern India. The moist and fairly cool southerly or sea winds blowing across the Bengal and Orissa coasts also increase in force. At the same time hot dry westerly and north-westerly winds blow steadily from Central India over a considerable part of the west and centre of the province, while moist easterly winds also blow down the Assam Valley. Bengal thus becomes a focus towards which these three wind systems, opposed in character and direction, converge, and it is apparently by their interaction that the usual hot weather storms are formed. At such periods pressure oscillates rather rapidly, and the changes at neighbouring stations are unequal, showing that the atmosphere is in a disturbed state, and more or less numerous thunderstorms with rain occur. Each storm is generally confined to a narrow area, and its existence is brief, and so far as is known they do not travel, as violent storms, more than about 30 or 40 miles. These storms form the only source of rain in Bengal during April. The rainfall brought by these storms is therefore very irregularly distributed; but, roughly speaking, the falls are greatest in the districts of East and North Bengal bordering on the Himalayas, and in the Assam and Arakan Hills, while the rainfall is least in the western districts generally, and in Behar and Central Bengal. Thus the normal rainfall in East and North Bengal varies from about two and-a-half to three and-a-half inches; in South-West Bengal it is about two inches; in Orissa rather more than an inch; while in Behar and Chutia Nagpur it equals about half an inch.

Meteorology of the month.—Conditions have been somewhat abnormal during almost the whole month, the peculiarities being the defective rainfall and constant high temperature. From week to week temperature has continued high, the only case of normal temperature occurring in one or two districts towards the middle of the month Pressure was in defect on the 7th and 8th, again on the occasion of a small depression on the 20th and 21st, and during the last few days of the month. In the early part of the month weather was fairly normal, temperature and pressure were in excess, and strong winds were blowing on the coast. This continued till the end of the first week, when pressure fell, and local storms with rain became general over almost the whole province; the exception being Behar, where scarcely any rain fell. Normal weather began again on the 13th, but it lasted for two days only. From the 15th up till the 19th storms occurred every day in East Bengal, North Bengal, and in some parts of South-West Bengal and Orissa. Even in these districts, where light rain was falling every day, the normal amount for the week was not received. The storms were generally unimportant and not of any great violence, but in the Rajshahye district on the 15th one of these local storms developed to such an extent as to become of almost tornado violence. Pressure changes during that period were small, but the winds were somewhat abnormal, directions being very variable during the three days from the 14th to the 16th, and the easterly element strongly predominating. On the 20th and 21st there was a rapid fall of pressure, giving a small low-pressure area over Bengal. The rapid rise that followed gave abnormally high pressure over part of the province, and local storms occurred in East and North Bengal. These storms were caused by a north-westerly wind setting in on the 24th, the south-west wind which had been previously blowing diminishing greatly in force on the rapid rise of pressure which began on the 23rd. Temperature kept on increasing, and the excess became large towards the end of the month. East Bengal again received local showers for a day or two about the 28th, and though some showers fell elsewhere, the amount of rain was very small. There have therefore been four periods of disturbed weather during the month, chiefly confined to East and North Bengal, and between these periods high pressure and temperature have everywhere obtained, more especially towards the end of the month.

Pressure.—Pressure changes have been generally unimportant, the only cases of rapid falls occurring at the beginning of the periods of disturbed conditions, four of which have been noticed above. During the first week of the month, pressure was about 0·05 inch above the normal, and changes were those characteristic of the hot weather. On the 7th and 8th a rapid fall occurred but the excess was quickly restored, and during the following week increased to more than a tenth of an inch. On the 16th and 17th pressure again fell below the normal. The most rapid changes of the month commenced on the 20th, when a fall of about a tenth of an inch was uniform over nearly the whole province. It continued a little less rapidly the following day, and the pressure became nearly two-tenths in defect. On the 23rd and 24th the rapid rise of between two and three-tenths of an inch brought pressure again considerably in excess After that a fall set in which continued till the 29th. During the last few days of the month pressure was considerably in defect. For the whole month pressure was very nearly normal in South-West Bengal and Orissa. In other districts there was a slight excess of about two hundredths of an inch. The monthly mean pressure for Assam differs very little from the normal.

Temperature.—One of the most pronounced features of the month's meteorology has, as stated above, been the very high temperature which continued through the whole month. Large local falls took place after storms, but notwithstanding these the mean temperature for the different districts was generally in excess. During the first week the excess was one to two degrees, and it increased during the second week. but temperature afterwards became very nearly normal. The most important changes were those which set in during the last part of the month when temperature became everywhere high, and the excess amounted in some cases to over 8°. Maximum temperature has been frequently over 100°, and at Burdwan, Cuttack, and Balasore has been over 110°. The mean for the month is over 2° in excess in all districts except Orissa, Chutia Nagpur, and Assam, where the excess is between 1·5° and 2°.

In the table below are given the variations of the actual maximum. minimum, and mean temperatures from the normal for each week of the month at nine typical stations in different districts of the province, and the figures will show clearly how largely temperature has been in excess, and also the general variations of the temperature from the normal :—

Stations.	Week ending 5th April 1889.			Week ending 12th April 1889.			Week ending 19th April 1889.			Week ending 26th April 1889.

Rainfall.—The number of rainy days and the quantity of rain which has fallen during April have both been defective, especially the latter. East Bengal is the only district that has received nearly its normal amount of rainfall. In South-West and North Bengal the rainfall amounts to about half the normal. Behar has been practically rainless As stated above, there have been four periods during which local storms have occurred, but it was only between the 9th and 12th that they were at all general over the province At other times rain was confined almost entirely to East Bengal, North Bengal, and part of South West Bengal. In East Bengal 3 24 inches fell, in North and South-West Bengal a little over an inch, in Orissa and Chutia Nagpur about half an inch, and in Behar only three or four hundredths of an inch.

Heavy rain fell in Assam—in Sibsagor over 8 inches and in Silchar over 13 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the month of April 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.							
	Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month	Of month.			Rainy days.			Since 15th May 1888.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 10th of May 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District observations. Rainfall. Since 1st of month. Mean for district.	Normal mean.	Variation.	Since 15th May 1888. Mean for district.	Normal mean.	Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater.
denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal means
are. The means of the district are the numerical average of he rainfall return received in the district, i.e., from total rainfall at the sub-divisional

Statement of Rainfall in Bengal for the week ending Friday (6 p.m.), the 10th of May 1889.

Meteorological division.	District.	Station.	Rainfall. Saturday, 4th May 1889.	Sunday, 5th May.	Monday, 6th May.	Tuesday, 7th May.	Wednesday, 8th May.	Thursday, 9th May.	Friday, 10th May.	Total. Number of rainy days.	Total. Rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 15th May 1888.	Average rainfall from 15th May to date.

Explanation.—... indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 14*th May* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE 10TH MAY 1889.

At the close of the previous week the general meteorological conditions which obtained were those of the hot weather in a very pronounced form. Throughout the present week these conditions have remained quite unaltered, and from its commencement up to its close the mean temperature of the province has been largely in excess of the normal. On Saturday, the 4th, pressure was falling at all stations except those in the west of the province, and as the fall was rather large in Assam and North Bengal, the deficiency of pressure over that area was increased, and thus the distribution of pressure was such that, while in Orissa and also at some of the stations in the south-west and south-east of the province pressure was above the normal, in North Bengal a defect of more than a tenth of an inch was recorded. Baric gradients over the province were therefore unusually steep, and perhaps this fact may account for the unusually strong southerly and south-westerly winds which were blowing at the head of the Bay and in South Bengal at this time, and which have continued to blow for practically the whole of the week. Temperature over the greater part of the province was also unusually high, the excess in the mean temperature ranging up to between 7° and 8° in South-West Bengal. On the 5th pressure rose slowly at most stations, but the general distribution remained unaltered, and pressure was still abnormally low in the north of the province. Very strong moist winds continued to blow at the head of the Bay, wind velocity at Saugor Island averaging 34 miles an hour. Temperature had risen still further on this day, and many stations in South-West Bengal showed mean temperatures from 10° to 12° in excess of the normal. A further rise of pressure took place on the 6th, and pressure became above the normal over the greater part of the province, and on this day the excess temperature became rather smaller. From the 7th pressure commenced to fall slowly up till the end of the week, when again a distribution of pressure obtained which was similar to that described at the commencement of the week. At the south-western, southern and south-eastern stations pressure was in excess of the normal by amounts ranging up to about 0·04 inch; while, on the other hand, at the stations in the centre and north of the province, pressure was below the normal by amounts which in many cases equalled nearly a tenth of an inch. Unusually steep baric gradients therefore again obtained, and winds were fairly strong over the whole province; a southerly and south-westerly current blowing in the south-western and southern districts, a southerly and south-easterly current in East Bengal, and easterly winds generally at the northern stations. The indraught over the land from the sea was at this time particularly strong, and from the 9th to the 10th the wind velocity at Saugor Island averaged 35 miles an hour, which almost amounts to a gale of wind. Very high temperatures continued to accompany these conditions, and the general mean temperature of the province at the close of the week was about 6° in excess of the normal.

These conditions have been unfavourable for the occurrence of local storms or nor'-westers over the greater part of the province for the week. In East and North Bengal conditions have been somewhat more favourable, and here local storms with rain have been rather numerous, particularly during the early part of the week; but even in these areas many districts have received practically no rain A few local storms have also occurred in the central and southern districts of South-West Bengal, but the whole of the remainder of the province has been practically rainless.

Pressure.—The main changes of pressure for the past seven days have been already alluded to. The distribution of pressure during the week has been similar to that which has existed now for some time, and has been decidedly abnormal from the fact that what almost amounts to a barometric depression has existed over the interior of the province. The feeble depression has generally occupied the area at the foot of the hills in North Behar and North Bengal, though it has moved sometimes towards the centre and west of the province. For the entire week the mean pressure of the whole of the province of Bengal has been about 0·013 inch in excess of the normal; but this excess is very unequally distributed, and in fact in some districts pressure is in defect. Defective pressures exceeding 0 02 inch are reported from Julpigoree, Chupra, Buxar, and Bhagulpore, while pressure has been in excess of the normal at such stations as Cuttack, False Point, Saugor Island, and Chittagong by more than 0 04 inch.

Temperature—As already stated, has been excessive, and throughout the week the mean temperature of the whole of the province of Bengal has averaged no less than six degrees in excess of the normal, while in South-West Bengal the excess amounts to almost eight degrees The mean temperature (*i.e.*, the mean of the daily maximum and minimum temperatures) of the stations in Chutia Nagpur, South-West Bengal, and South Behar has averaged about 93°, in North Bengal and Orissa it has averaged 87°, and in East Bengal about 85°. In Assam, on the other hand, temperature has been normal, and the mean tempera ure there only equals 77°.

Rainfall.—East Bengal has received an average fall of 1·30 inches of rain during the week, which is a little more than half the normal fall. North Bengal has reported an average of 0·64 inch, which is only about one-third of the normal, but in other districts rainfall has been practically absent.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 10th May 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1888.

METEOROLOGICAL OFFICE, INDIA ;
The 13th May 1889.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

FROM the annexed table, exhibiting the vital statistics of the principal Municipalities in Bengal, for the week ending 27th April 1889, it appears—

1. That births were registered in those Municipalities at the rate of 20· per 1,000 of population as opposed to very nearly the same proportion, viz., 19·7 per 1,000 in the preceding week ending 20th April, and deaths at 24·8 against 21· per 1,000, showing a large improvement in the registration of deaths.

2. That births and deaths were recorded at the highest rates in the following Municipalities:—

Births.

	Ratio per mille.
Comillah	38·5
Bhagulpore	35·3
Durbhanga	34·6
Darjiling	32·6
Rampore Beauleah	31·5
Purneah	31·2
Puri	29·4
Naraingunj	29·0

Deaths.

	Ratio per mille.
Purneah	58·9
Rampore Beauleah	57·8
Jessore	49·0
Burdwan	47·3
Comillah	42·4
Gya	38·3
Puri	37·8
Serampore	35·3
Durbhanga	33·0
Dacca	31·8
Monghyr	31·6

3. That, compared with the outcome of the preceding week, the maladies coming under the head of "Other causes" alone exhibits an increase of mortality, the fatal results from the other diseases exhibiting only fractional differences. The mortality from injury was the same as in the previous week; see figures below:—

	Ratio per mille during the weeks ending— 27th April 1889.	20th April 1889.
Cholera	4·4	4·2
Small-pox	7	·3
Fever	8·5	8·3
Bowel-complaints	2·5	2·0
Injury	·5	·5
Other causes	8·0	5·6

4. That the following Municipalities appear to have suffered most from the diseases specified in the above table, excepting injury, the death-rates from which were nowhere above normal:—

Cholera.

	Ratio per mille.
Purneah	45·0
Rampore Beauleah ...	34·2
Serampore	19·6
Dacca	14·3
Howrah	4·6
Gya	4·1
Durbhanga... ...	3·1

Small-pox.

	Ratio per mille.
Gya ...	2·0

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remain as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of

General remarks on the fluctuation of principal staples carried over the East Indian Railway during five weeks ended 30th March 1889.

INCREASES.

Coal and coke.—There was an increase in both the upwards and downwards traffic; that in the former was due to a large demand both by foreign railways and the public. In downwards traffic the increase may be ascribed chiefly to larger takings of coal by steamers, and also to brick-burning operations in connection with the Kidderpore Docks.

Cotton.—The increase under this head was due to despatches to Howrah for export.

Piece-goods, European.—This was chiefly in despatches from Howrah, and the increase was general.

Gunny.—Principally in long distance despatches from Howrah and adjacent stations for Cawnpore, Hathras, Delhi, and the Oudh and Rohilkhund and North-Western Railways.

Wheat.—The increase was principally in long distance traffic to Howrah, and was due to a fair demand in Calcutta.

Opium.—Due to despatches of manufactured opium from Patna and Tarighat having been delayed till March.

Stone.—This is in continuation of the increase reported for February.

DECREASES.

Fruits, other kinds.—Chiefly in betel-nuts from Calcutta, and hurra from stations on the Allahabad district.

Gram and pulses—

Other rain and spring crops.—There were large decreases at Bhagalpur, Mokameh and Barh owing to there not being the same surplus as in 1888, while up-country demands were less.

Rice (husked and unhusked).—There was an increase in weight carried, but decrease in earnings. The former was due to good crops in the neighbourhood of Burdwan, Raneegunge, and other stations on the Howrah district, and to a good demand in Calcutta; while the decreased earnings are explained by the circumstances that as with gram, pulses, and other grains, the up-country demand was limited, and there was therefore practically no long lead traffic during the month.

Hides.—The decrease under this head was principally from Delhi for Calcutta, owing to accumulations in Calcutta of North-Western descriptions, and the absence of demand causing prices to recede below sellers' views.

Iron.—Due to an exceptionally large traffic in iron during March 1888.

Railway material—Foreign.—This was due to considerable despatches of material for the Indian Midland Railway having been made *viâ* Jubbulpore to Jhansi last year.

Salt.—There was an increase in the despatches of imported salt from Howrah, counterbalanced by decreased receipts of country salt at Agra and Delhi for onwards carriage.

Seeds.—The decrease was in linseed, mustard and rapeseed and other oilseeds, and was due to limited demand from Europe and short stocks up-country.

Sugar and jaggree.—There was an increase in weight carried, attended with a decrease in earnings, and the former was due to short distance despatches from Delhi to Etawah and Firozabad principally; from *viâ* Ghaziabad to the same and other stations on the Tundla district, and from Delhi Shadara. The decreased earnings were partly due to diversion by the Indian Midland Railway.

Tobacco.—Due to the crops having been seriously injured by a hailstorm in February last.

N. ST. L. CARTER, *Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, 10*th May* 1889.

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal assembled for the purpose of making Laws and Regulations under the provisions, of the Act of Parliament 24 *and* 25 *Vic., cap.* 67.

THE Council met at the Council Chamber on Saturday, the 11th May, 1889.

Present:

The HON'BLE SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding.*

The HON'BLE SIR CHARLES PAUL, K.C.I.E., *Advocate-General.*

The HON'BLE P. NOLAN.

The HON'BLE T. T. ALLEN.

The HON'BLE SIR HENRY HARRISON, KT.

The HON'BLE SIR ALFRED CROFT, K.C.I.E.

The HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.

The HON'BLE C. H. MOORE.

The HON'BLE SHAHZADA MAHOMMED FURROKH SHAH.

The HON'BLE DR. RASH BEHARY GHOSE.

The HON'BLE RAJA RAMESHWAR SINGH BAHADUR.

PRIVATE FISHERIES BILL.

The HON'BLE SIR CHARLES PAUL presented the report of the Select Committee on the Bill for the protection of the right of fishing in private waters,

and moved that the report be taken into consideration in order to the settlement of the clauses of the Bill.

The Motion was put and agreed to.

The Hon'ble Sir Charles Paul also moved that the clauses of the Bill be considered in the form recommended by the Select Committee.

The Motion was put and agreed to.

The Hon'ble Sir Charles Paul also moved that in line 17 of section 3, after the word 'imprisonment' the words 'which may be simple or rigorous' be inserted. He said:—"I find that the Act for shortening the language of Acts of the Bengal Council does not, as the analogous Act of the Viceroy's Council does, define the word 'imprisonment;' it is therefore necessary to add the words 'simple or rigorous' after 'imprisonment.'"

The Motion was put and agreed to.

The Hon'ble Sir Charles Paul also moved that in clauses 1 and 2 of section 4, for the words 'obstruction or' the word 'fixed' be substituted. He said:—"As the section stands it is not very grammatical; the amendment would include everything that is required."

The Motion was put and agreed to.

The Hon'ble Dr. Rash Behary Ghose moved that for clause (2) of section 3, the following proviso be substituted:—'Provided that nothing herein contained shall apply to acts done by any person in the exercise of a *bonâ fide* claim of right, or shall prevent any person from angling with a rod and line, or with a line only, in any portion of a navigable river.'

He said:—"The amendment which stands in my name consists of two parts. The second part, which makes a concession in favour of the disciples of Isaac Walton, comes before the Council with the recommendation of the Select Committee in favour of it. I need not, therefore, say anything as regards this part of the amendment, except that, as we all know, the gentle art is practised more frequently for sport than for gain, and that at any rate by confining the right to navigable rivers we shall be well within the maxim *de minimis non curat lex*. As regards that part of the amendment which says that 'nothing contained in the Act shall apply to acts done in the *bonâ fide* exercise of a claim of right,' it will be enough to remind hon'ble members that it only formulates a well-known maxim—I had almost said axiom—in Criminal Jurisprudence: 'There can be no offence, no crime, unless there is a guilty mind.' I will only refer to a well-known text-book on this subject—Maxwell on the construction of Statutes—in which the result of the authorities is thus stated:—'*Mens rea*, or a guilty mind is, with few exceptions, an essential element in 'constituting a breach of the criminal law; a statute, however comprehensive 'and unqualified it be in its language, is usually understood as silently requir-'ing that this element should be imported into it, unless a contrary intention be 'expressed.' It may be said—indeed it has actually been said—that the effect of introducing this proviso will be to render the whole law a dead-letter, which would therefore only cumber the Statute Book, without ever having any practical operation. Now those who raise this objection seem to forget that a *bonâ fide* claim of right is not the same thing as a mere pretence set up simply for the purpose of avoiding the jurisdiction of the Magistrate. A *bonâ fide* claim must rest on fairly reasonable grounds; and although a man may not, if I may use the expression, have, in respect of a particular act, a guilty conscience, and therefore in one sense may be said not to have acted dishonestly, yet he would not succeed on a plea of *bonâ fide* claim of right, unless he could show that the conclusion at which he had arrived was based on reasonable grounds. Then, again, it seems to me that those who take exception to this amendment forget that there is substantially the same limitation in the definition of theft in the Indian Penal Code; and yet I think it will be allowed by everybody that the Indian Penal Code has not been a dead-letter. It is worthy of notice that those who are opposed to the amendment seem to think, or certainly at one time thought, that acts made punishable under this Bill were punishable under the Indian Penal Code. But it is clear that a person who acted in the exercise of a *bonâ fide* claim of right could not have been convicted under

the Penal Code; and certainly the owners of private fisheries in public rivers are not entitled to a larger measure of protection than the owner of a fishery in a tank or other enclosed piece of water. There may possibly be a distinction between fish confined in a tank and fish in a river, but the distinction, if there is one, is certainly not in favour of a larger measure of protection being given to the owners of fisheries in rivers, or in waters where the fish are neither reared nor preserved by the owners of the fisheries. Difficult questions of law are, moreover, sure to arise. I may here refer to an instance which came a few years ago within my experience. An action was brought by a well-known landowner in the district of Rungpur to restrain certain tenants of his from fishing in a *bheel*: the tenants set up an immemorial custom under which they and their forefathers before them for several generations had been in the habit of fishing in the lake on a particular day in the year. The case was heard by a Subordinate Judge of considerable experience, and he came to the conclusion that the tenants were entitled to exercise the right set up by them. The action was heard in appeal by a District Judge, also of considerable experience, and he too came to the same conclusion. In appeal, however, to the High Court both these judgments were set aside on the ground that the right set up by the tenants was not recognised by the English law, and that there was no reason why the Courts in this country should refuse to follow the English law on the point. Now, if the amendment I propose is not carried, the result will be this. These men, who thought they were not doing anything wrong in exercising the right of fishing, and who might well be pardoned for thinking so, seeing that the Subordinate Judge and the District Judge were also of that opinion, would be punishable as criminals. I submit that it ought not to be so: and that, as soon as the Magistrate is satisfied that there are reasonable grounds for the claim set up, he ought to hold his hands and leave the matter to be decided by the ordinary civil tribunals. Another objection has been suggested to the amendment which I will notice, and that is this—that it is not necessary to have an amendment of this kind, because no Criminal Court will punish a man who made out a *bonâ fide* claim of right. I will only say in answer to this objection that it only shows that the amendment, although sound in principle, is superfluous and unnecessary. But I think that, although no doubt in olden times the Judges used to take a great deal of liberty with Acts of Parliament, when the art of draftsmanship was in a rudimentary state, it would now be a very strong thing for a Judge or Magistrate to say that, although an Act says that a man who without being legally entitled to fish in certain waters, fished in them, is liable to punishment, he must not be punished because we must not impute to the Legislature an intention to punish *bonâ fide* mistakes. I think that, when we have a written law, the whole of the law ought to be contained in the Statute, and that no one should be allowed to set at naught the intention of the Legislature by referring to some unwritten rule of construction drawn from books of reports extending, at least in England, over more than five hundred years, not to say anything of the perplexity occasionally caused by conflicting decisions. With these observations I move the amendment which stands in my name."

The HON'BLE MR. ALLEN said:—"It appears to me that this question is simply one of practical bearing. The Bill is a Bill for the protection of the right of fishing in private waters, and I suppose the hon'ble member will not pretend that his amendment is likely to assist in the protecting private rights of fishery. It is rather in derogation of the general objects of the Act itself. It comes in at the tail of section 3 of the Bill, the first clause of which says—'Any person who fishes in any private waters, not having a right to fish therein shall be guilty of an offence'; and then comes the amendment, which says that 'nothing herein contained shall apply to acts done by any person in the exercise of a *bonâ fide* claim of right.' It seems to me that the amendment takes away very materially from the effect of the first clause, which protects rights of fisheries in private waters, by making it a criminal act to fish without a right; but the hon'ble member says that it is to be no offence if only you put forward what you imagine to be a *bonâ fide* claim of right. There is no word which is probably used more often *mala fide* than that expression *bonâ fide*. It generally represents the view an individual takes of what is for his own interest. As a protection for those who have *bonâ fide*

rights, I think the amendment is perfectly unnecessary. It is a principle underlying all criminal jurisprudence that, where there is a *bonâ fide* claim of right, the jurisdiction of the Criminal Courts is ousted. But the introduction of this amendment into the Bill is likely to have, not a *bonâ fide* effect, but on the contrary is likely to afford additional excuses for Magistrates to throw off their own hands, work which must form an exceedingly disagreeable duty. Nothing can be more troublesome than these questions of criminal trespass, and such like, where the contending parties are disputing about interests in land or water. It is not the case that Magistrates are eager to grasp at jurisdiction improperly. As the result of my experience, I should say Magistrates are only too ready to refer parties on any possible pretence to the Civil Court. The real object of this Bill is to provide a speedy and inexpensive mode of obtaining redress against a class of people against whom civil suits are practically valueless. Those who fish without possessing a right are not people of substance—zemindars or others: on the contrary, they are nocturnal wanderers, *machwars*, and the like, who for the most part make their livelihood by such forms of trespass, and it is necessary that there should be a speedy means of redress, and what is the redress given? It is a fine of Rs. 50—call it, not a fine but damages; and what is there to object to? The Magistrate is just as likely to do justice in such cases as a Munsif, and more so, because he is not trammelled by a Code containing over six hundred sections to guide his procedure. Therefore it appears to me that, as a protection of *bonâ fide* rights, this amendment is not necessary. Claims of right are already recognised, but the introduction of this amendment may have the effect of neutralising the whole Act."

The HON'BLE MR. NOLAN said:—"Mr. President, the hon'ble member who moved this amendment did so in a speech so full and lucid that it is quite unnecessary that I should attempt to give him the support which, as the only person who acted with him on the Select Committee, I feel bound to afford, otherwise than by removing any misapprehension as to the facts of the case which may have been created by the last speaker. As that speaker remarked, this is a practical question, and in dealing with such questions it is above all things desirable that we should clearly understand the facts. The hon'ble member has informed us that the persons who will be prosecuted under this Bill are nocturnal wanderers, who make a livelihood by poaching on fisheries belonging to others; and if this were a correct statement, little importance would attach to the amendment. It will not, as the hon'ble member seems to suppose, enable such wanderers to escape the consequences of their trespass, for under it they will be required, not merely to set up a colourable title, such as the jealousy of the law has made a sufficient defence in England, but to establish to the satisfaction of the Magistrate that they have a *bonâ fide* claim to the fishery, the burden of proof will rest on their shoulders, and, poor poachers as they are, they will be altogether unable to make out a right to the satisfaction of a Court. In regard to them, if any such men there be, the amendment can do neither harm nor good; to their circumstances it is simply irrelevant. But the papers showing the origin of the Bill contain no reference to such wanderers, and the decided cases regard a class of persons altogether different. The whole bearing of the Bill, and the importance attributed to this amendment, will be misunderstood unless we turn our attention from casual trespasses to concentrate it on the disputes which everywhere exist as to the rights of fishery exercised in Bengal. In illustration of these rights I may refer to the great Chandpore Julhan in Tipperah, as to which Government has recorded a Resolution:—

'The Sudder Court, in a decision of September 1859, pronounced that the best right made out to this julkar (which is there described as not 'above the ebbing and flowing of the tide,' and as 'an arm of the sea,') was that of the public. In the face of this decision it is impossible for the Government to make over the fishery to any individuals to the exclusion of the public generally. The Government is now bound to do all in its power to throw open the fishery as a common right to the public, and to take care, as the guardian of the public interests, that it is not monopolised by any single individual or party.'

"This is no isolated instance of the existence of public rights in important fisheries, over which individuals desire to establish a monopoly. The most valuable fisheries in Bengal are those in tidal rivers, and it has always been the policy of Government to keep these open, free of any rent or revenue, for the

common use of all. Claims to a monopoly have, indeed, been advanced from time to time by the owners of neighbouring estates, but these are generally regarded as invalid, and are not enforced in practice. Leaving the great rivers, to consider the state of things on our principal lakes, I find that, in the opinion of the local officers, no monopoly of fishing rights has ever been granted in the well-known Chilka inland water, the largest and most valuable of the province. In the open waters of that lake the fishing is in practice free, while in the creeks and inlets exclusive rights are claimed, but disputed, so that there has been much friction, and no little litigation. As to the minor pools, I will read an extract from a letter which I received yesterday from a manager in charge, on behalf of the Court of Wards, of the largest estate in Bengal, a public servant of unrivalled experience:—

'Judging from my knowledge gathered from an intimate acquaintance with the districts of Purneah, Dinagepur, Maldah, Bhagulpur and Rajshahye, I can say that a very well-defined customary right to fish in *jheels* and other pieces of private waters does exist which every villager is cognisant of, and has exercised hitherto without let or hindrance year by year. The custom I allude to is that, which permits any villager residing within the mouzah in which a *jheel* may be situate to fish in that particular *jheel* between the date of the *Holi* festival and the date when the first flow of new water from the river enters the *jheel*. This right, whether it be one enforceable by the law or not, is probably older than the times in which the zemindar was created and became the possessor of the land; and might in point of antiquity and uninterrupted user be fitly compared with the rights of common, and similar privileges, preserved by law to the poorer inhabitants of a parish in England.'

"But the evidence most appropriate to the present occasion is that afforded by the abstract of decided cases laid before this Council when the Bill was introduced. In the first of these cases the prosecutor could not prove that he had proprietory rights; the second regarded what is described as a *disputed* fishery; to the third, which runs as follows, I would draw your special attention:—

'A and B asserted their prescriptive right to fish in a lake free of rent, and C had failed to establish the relationship of landlord and tenant in a suit brought by him under Act X of 1859 to get rent from them.

'Glover J. held that to convict A and others under section 441 of the Penal Code, it must be shown that they entered upon property in the possession of C with intent to commit an offence. The element of intention was wanting. A and others asserted, and had all along asserted, a prescriptive right to fish in the lake without the payment of rent. Considering that they had vindicated their claims and had a right to fish as they had done before, and that they were acting *bonâ fide*, and not exceeding their supposed privileges, C's notice, warning them not to fish, did not change the state of affairs so far as section 441 was concerned, and that therefore there could be no conviction for criminal trespass.'

"I might cite other cases from the abstract, but it is enough to add that none of them contain any reference to trespass by mere wanderers, and that, taken as a whole, they establish with perfect clearness the fact that this Bill owes its origin to prosecutions in many of which the alleged proprietor of the fishery could show no right to the monopoly he claimed, and the alleged thief or trespasser was an honest fishermen plying his trade openly, and in good faith, in waters where he had, or believed that he had, a legal title to fish.

"It is with reference to these facts that the amendment has been framed, for the protection of fishermen exercising genuine rights, against persons attempting to establish a monopoly without a title, or on a doubtful title. And, the circumstances once understood, I am in a position to give an assured reply to the assertion of the hon'ble member on my right (Mr. Allen) that the adoption of the present proposal is not consistent with the principle of a Bill for the protection of rights in fisheries. On the contrary, the amendment is necessary if such rights, in their most useful form, that is to say, when appertaining to the actual fishermen, are to be protected from usurpation and encroachment. It is by no means fair to such men that they should be compelled to defend their ancient privileges from the dock, before courts accustomed to deal only with alleged criminals. I cannot for a moment believe that this Council will subscribe to the opinion of the hon'ble member, that such Magistrates will decide better as to complicated questions as to the existence of a monopoly in open waters, or of easements over private waters because exempted from the operation of the Civil Procedure Code, which has been framed in all its details so as to provide adequate safeguards for the due examination of all causes.

"The hon'ble member states it, as a general principle of all law, that a person acting *bonâ fide* cannot be subject to penal consequences; and he considers that the magisterial courts of this province are inclined to push this doctrine to extremes. These statements are relevant only if we are prepared to say that the principle in question is so universally accepted that any special provision in penal laws to make it clear that the acts for which they provide punishment must be committed wilfully, maliciously, or dishonestly, is unnecessary and superfluous. Now that, Sir, is a view opposed to all approved practice in drafting laws, whether for England or for India. For instance, the English statute on this subject limits the offence to those who fish *unlawfully and wilfully*; the Indian law now applicable to stealing fish from tanks provides that the act must be committed *dishonestly*, and proceeds to explain that this means, with the intention of causing wrongful loss or wrongful gain. Are we to override precedent by providing a punishment for the mere deed, without reference to the intention, without any statutory safeguard for the protection of those who act in good faith? It is true that if we do so the highest court of the province may eventually supply the deficiency, reading the general principles which should have guided us in legislation into the curt provision of the Bill as it stands, that 'any person who fishes in any private water not having a right to fish therein shall be guilty of an offence.' But we would abandon our proper functions were we to trust the exemption of the innocent from penalties of our own creation to such a contingency. It is our plain duty in this matter to say what we mean, and if we desire that the amendment shall in fact be operative, to pass it as part of the law. That all Magistrates, of all classes, are unduly disposed to acquit persons accused of such offences is a proposition startling from its novelty. I will ask the Council to decide it, not on my experience, or on that of the hon'ble member, but on the evidence of the cases in the summary before them, which is little more than the account of a series of improper convictions.

"In conclusion, I must express a hope that the hon'ble and learned member in charge of this Bill (with which my connection is that only of a member of this Council) will be able to accept the amendment, which is identical with a recommendation which he himself made to Government at an early stage in the preparation of this measure. The law passed will then be useful, as affording protection to real proprietors against wilful trespassers, without giving to those desirous of establishing a monopoly of the right of fishing in public waters a weapon for attack on industrious fishermen exercising their rights, according to law and immemorial custom."

The HON'BLE SIR HENRY HARRISON said:—"I must say I entirely concur with the learned Legal Remembrancer that this amendment will go very far, if not entirely, to neutralise the effect of the law, and that the arguments which were chiefly used in support of it, if carefully analysed, are more or less wide of the mark. The very first argument which the hon'ble member opposite (Mr. Nolan) adduced showed that, in the large rivers of Bengal, there was a right of fishing; but it did not need a provision of this kind to give the fullest possible security to those who chose to exercise it. 'Private fishery' is defined in the Bill to mean private waters in which any person has an exclusive right of fishery, and in which fish are not confined; but have means of ingress or egress. Consequently, if there is any possible question whether there is a right of fishing, it is perfectly plain that the prosecution must prove completely that there is an exclusive right of fishery. So far as such claims exist, they will have the amplest means of asserting themselves. Then as regards the injustice of criminally punishing a person who acts *bonâ fide*, it can hardly be said that under this Bill a man will be punished criminally in any real sense of the word. The object is only to give fair protection to rights which exist. The person punished is not really in danger of being sent to jail, merely because under a *bonâ fide* error he is infringing another man's right. If a person does make a mistake of that kind, possibly it might seem a very dangerous doctrine, but it seemed to the speaker that no great moral wrong would be done if he were fined a rupee for his mistake. The last and most important point is this:—It is said that the Magistrates look on this plea of *bonâ fides* with very great suspicion. That was not his experience, and a case which occurred in Calcutta would go far to illustrate this. No one in Calcutta

is authorised to carry on a market without a license, except in the case of the older markets which require only to be registered. The owner of a market having a quarrel with a neighbour, thought he would annoy his friend by removing the fish stalls in his market, and placing them directly to the south of his friend's house, and giving him the benefit of all the stench from the fish; and he did so. On this the person thus injured brought the matter before the Commissioners, and on looking up the market license it was clearly seen that the fish stalls were to be in another place; so the license was withheld until the fish stalls were brought back to the place where they were originally intended to be. The owner of the market refused to remove the fish stalls, and the first time the municipality prosecuted for holding a market without a license, the defender got off on the plea that he had his municipal license-tax. As the offence continued, the Commissioners again prosecuted, drawing attention to the legal objection which they knew was invalid, and asked for a summons, so as to have the point of law determined. The summons was granted by the Stipendiary Magistrate, who overruled the objection, and the hearing was again before the Honorary Magistrates. The case ran a marvellous course, and though the simplest possible, it was postponed from week to week. At last, in a moment of inspiration, it struck the market-owner's pleader to urge that his client had throughout acted *bonâ fide*—a plea which was instantly accepted, and the case dismissed."

The HON'BLE MR. MOORE said—"I believe I am the only person present who signed the original memorial to your Honour, which is the origin of the production of this Bill. I am not personally interested in the question, but acted on behalf of a gentleman who is largely interested in julkur rights, and I therefore wish generally to express my view without entering into special arguments. The memorialists prayed for legislation to make criminal this offence against private rights, which the existing law failed to do. This Bill was drawn, and it was a sound and healthy one as originally submitted to us. But the creators of it have since apparently got frightened at what their healthy young infant may propagate, and now deliberately propose to submit it to a process of emasculation. Now, I object to this altogether. I cannot follow the mover of the amendment in his sentimental pleas not to prosecute certain offenders criminally, and it seems to me he makes them a direct invitation to weave pretty little romances to condone their offences. I wish to preserve for this Bill its pristine vigour, and I therefore intend to vote against the amendment, and I sincerely hope it will be lost."

The HON'BLE SIR CHARLES PAUL said—"I think there is some misconception as to the effect of this section. The last speaker seemed to think that the introduction of this section would altogether emasculate the Bill. By that I understand him to mean that in every case there will be a plea of *bonâ fide* claim set up, and that the plea is sure to succeed. If that should be the result of the amendment, we should stultify ourselves, if we accepted it. But it is quite obvious that that cannot be the case. In the case of the marauders referred to by the Hon'ble Mr. Allen, they would not have the effrontery to come before the Court with a *bonâ fide* claim of right. The question, however, is not altogether free from difficulty. The section says—'Any person who fishes in any private waters, not having a right to fish therein.' That requires the Magistrate to try and punish as an offence what is essentially a civil matter. That being so, if the Magistrate were capable by learning and experience to decide a difficult question of right, and his decision when appealed against and upheld by the High Court resulted in finality, I should be free to admit that the Bill should be allowed to stand without amendment. But unfortunately there can be no such finality, because either party will be able to re-agitate the same matter in the Civil Court. The Magistrate might thus try a case, and his decision might be confirmed in appeal, and yet the whole matter might be taken up to the Civil Court. Therefore when a case is brought which clearly shows that a man has a right which he may fairly put forward in a civil suit, it seems necessary and just that it should not proceed further in a Magistrate's Court. In order to make my observations clear, I shall give an illustration to show that there may be cases the Magistrate should not try. Suppose in a navigable river X has a right to

fish from point A to point B, and Y has a right to fish from B to C, and the question arises from where the line from B is to be drawn. X says it should be drawn from a certain point; Y says it should be drawn from a certain other point; and thus a boundary dispute arises. The Magistrate would then have to try a boundary dispute. It would not, in my opinion, be proper for the Magistrate to have to try a boundary dispute of that sort, and it would be unjust to the man who produces fifty witnesses to say that he has always regarded the particular place as within his boundary, that he should be punished by the Magistrate for fishing within that boundary. It cannot be an offence to do on one particular day what a man has done for twenty-five years in the *bonâ fide* belief that he had the right to do so. I think the arguments in favour of the amendment are so strong, and have been so lucidly and ably stated by the hon'ble mover of the amendment, that anything I might say might rather detract from their force than add to them. I therefore support the amendment."

The HON'BLE DR. RASH BEHARY GHOSE said in reply:—"It was said by the learned member who spoke first in opposition to my amendment that this was a Bill for the protection of private fisheries, and an amendment like this cannot therefore have any place in the present Bill. Now, the Indian Penal Code, I take it, is a Code enacted for the protection, amongst other things, of rights of private property. That Code says that if you take property from another it is theft; but it also says that it is not theft if you take it *bonâ fide* in the honest belief that you are entitled to it. Then it was said that the offence dealt with by this Bill may be called a crime; but what is the penalty?—only a paltry fine of Rs. 50. That may be a paltry amount to some of us: but we have been told that the people against whom the Bill is directed are poor, and that it will be impossible to recover any damages from them. That may be their misfortune: but I think a fine of Rs. 50 on a poor man means imprisonment in default of payment of the fine. I take it therefore that the punishment is a substantial punishment. Then it is said—Oh! but everybody will plead *bonâ fides*. It is not, however, what everybody may choose to plead, or even what everybody believes, that will decide the fate of the prosecution. The fate of the prosecution will be determined by the judgment of the Magistrate on the question whether there are, or there are not, reasonable grounds for the claim which has been set up; and I take it that in passing a law like this, and arming the Magistrate with authority to punish the offender under this Act, we ought to proceed on the assumption that the gentlemen who will be called upon to exercise such authority are fairly competent for the discharge of their duties. Then the last argument of the hon'ble member seems to me altogether to destroy the force of what he had previously said. He said the administration of criminal justice proceeds upon the assumption that a man is not a criminal if he acted in good faith, or in the belief that he was entitled to do what he is charged with having unlawfully done. If that is so, where is the harm of putting in this clause in the statute itself? One may admire codification with its beautiful simplicity; one may also admire case-law with its remarkable elasticity, but I do submit that one cannot feel much admiration for a hybrid amalgamation of code law and case law where you have to find out the law, not from the statute itself, but partly from the statute and partly from the reported and unreported utterances of English and Indian Judges. That is a principle which I do submit is certainly not desirable. Then, again, something was said by the other hon'ble members who spoke—at least by one hon'ble member, so far as I remember—as to my objection being purely of a sentimental character. I submit that it is not so: and even if it were, the hon'ble member seems to forget that the administration of the criminal law is founded on the rules of morality, and ought not to be in habitual conflict with the general moral sentiments of the people. It has been said that you cannot make the squire and the labourer take the same view of the offence of poaching: and I think there may very well be a distinction between fish confined in a pond and fish enjoying their natural liberty in navigable rivers—at least in minds not trained to the appreciation of subtle or hidden analogies. We all know what Sydney Smith said of the difference between poultry and partridges: the difference certainly is not less marked here. I admit there is a right of property in unconfined fish: the Bill acknowledges it and protects it; but I submit it would be

going too far if you were to punish those who, as one hon'ble member stated to the Council, had been in the habit of enjoying customary rights for generations, in happy ignorance of Gateward's case; the practical result, as those who have any experience of Indian litigants and their ways are well aware, would be simply to deter these people from exercising their ancient rights. Let it be fought out in the proper court, if it has to be fought out at all, namely, the civil court, but the terrors of the criminal law must not be called in aid to deter these people, humble and poor, and generally without the means of defending themselves properly, from exercising their rights until the civil court shall have pronounced its decision."

The Motion being put, the Council divided:—

Ayes 6.	*Noes* 5.
The Hon'ble Dr. Rash Behary Ghose.	The Hon'ble Raja Rameshwar Singh, Bahadur.
The Hon'ble Shahzada Mahommed Furrokh Shah.	The Hon'ble C. H. Moore.
The Hon'ble Dr. Mahendra Lal Sircar.	The Hon'ble Sir Alfred Croft.
The Hon'ble P. Nolan.	The Hon'ble Sir Henry Harrison.
The Hon'ble Sir Charles Paul.	The Hon'ble T. T. Allen.
His Honour the President.	

So the Motion was carried.

MUHAMMADAN BURIAL BOARD'S BILL.

The HON'BLE SIR HENRY HARRISON presented the report of the Select Committee on the Bill to provide for the appointment of a Muhammadan Burial Board in Calcutta, and moved that the report be taken into consideration in order to the settlement of the clauses of the Bill.

The HON'BLE MR. ALLEN said—" Hon'ble members will be aware that I declined to sign this report, and the ground on which I did so was purely one of order. It appeared to me that the hon'ble member in charge of the Bill had induced the Committee to violate the standing rules which regulate the conduct of business in this Council, and it would be highly improper to allow such violation to pass unnoticed. The first rule on the subject of legislation is, that no Bill can be brought into Council without the leave of the Council asked on motion and obtained, and after the leave is obtained, and at the time of introducing it, the member in charge of the Bill is to submit a full statement of the objects and reasons of the Bill. Subsequently the Bill, so accompanied, is made over to the Select Committee to report, and one rule says that it shall be the duty of the Committee to revise the Bill, clause by clause, and to recommend any amendments therein that may to them seem advisable. There is no authority given to the Select Committee to go beyond the purport of the Bill which the Council has submitted to it for report, and it is only so far as the Bill that has been submitted to the Committee goes that the Committee are justified in making changes. To add to the Bill substantially, to introduce objects which are not covered by the Bill as introduced to the Council and as submitted to the Committee for report, is, I contend, entirely beyond the functions of the Select Committee. Now, applying this principle to the present case, the Bill which the hon'ble member applied for leave to introduce into the Council was simply a Bill to provide a Muhammadan Burial Board for Calcutta. That was the Bill which was made over to the Select Committee for report, and it was only in respect of that Bill, and within the scope of that Bill, that the Committee had any functions whatever. But the hon'ble member in charge induced the Committee to make a substantial addition to the Muhammadan Burial Board. He has induced the Committee to add a section to the Bill which calls into existence a second Board, of which no mention was made when he asked leave to introduce the Bill, or in the Statement of Objects and Reasons which accompanied the Bill. This new Board is not the fag end of the Muhammadan Board after the Muhammadan members have withdrawn, in which case it might have been held covered by the Bill as introduced, but is to have a legislative existence independent altogether of the previous part of the Bill. It is to exist under the terms of the last section which has been added

to the Bill. This Burial Board has no name, and the wording has been most ingeniously arranged, so as to conceal the significance of the addition to a large extent, so that one might suppose that it was a sort of emanation from the Bill as it was referred to the Select Committee. But it is in fact an entirely new Board which the Lieutenant Governor may charge with functions outside those of the Muhammadan Burial Board. This second Board is to have quite as independent a legal existence as the Muhammadan Burial Board. No name has been given to it, but I suppose it ought to be called the Baishnaba Burial Board, because those are for the most part the Hindus who would be affected by it. I submit that the Select Committee had no authority to create a Baishnaba Burial Board; they got no authority from the Council to do so, and there has been no proper opportunity for those who are interested in the measure to consider it. But as to the substance of the addition to the Bill I don't speak at present. I simply contend that the Committee are not at liberty to add in any way substantially to the purport of the Bill committed to them. These are the reasons which have led me to decline to sign the report of the Select Committee, and it is for the Council to consider whether it will consent to have its rules of business set at naught by any member who may be in charge of a Bill, or whether it will insist that the hon'ble member shall master his facts and fix in his mind beforehand the whole scope and objects of the Bill before he comes to this Council for leave to introduce it, and not allow deficiency in scope to be patched up in the Select Committee. I submit that when rules for the conduct of business have been passed a rigid adherence to those rules should be observed. I think this is a case in which we should be careful to prevent the introduction of the thin edge of the wedge, although I must say that this is a case in which the hon'ble member has not attempted so much to introduce the thin edge as the broad edge."

The HON'BLE THE PRESIDENT said:—"It may help matters, and at all events influence the course of the debate, if I put before you one or two considerations which occur to me. I don't think it necessary at the present stage to go into the substantive question. We have heard the brilliant attack which the Hon'ble the Legal Remembrancer has made on the mover of this Bill, and we cannot help recognising his eagerness to uphold to the strictest letter, the rules of the Council. But I am bound to add that he has not ended with any substantive motion; he has not proposed as an amendment that we should not proceed with the Bill, and has not given any assistance whatever towards the decision of the question, what we shall do next. Suppose the hon'ble member's view is correct, that the Committee has behaved very improperly, there were no pains and penalties provided for them, and the Council, so far as he is concerned, will simply be at a dead lock. Therefore what I have to say is, that in discussing the motion that the report of the Select Committee be considered, I shall be much obliged if those members of the Council who take the same view as the Hon'ble the Legal Remembrancer of the impropriety of the Committee's conduct will indicate the course with reference to the progress of the Bill which they wish to see adopted."

The HON'BLE DR. RASH BEHARI GHOSE said—"I find that rule 5 provides that when the report of the Select Committee is taken into consideration it may be moved that the clauses of the Bill be considered for settlement in the form recommended by the Committee.

"The course therefore for the hon'ble member in charge of the Bill will be to move that clauses of the Bill be considered for settlement in the form recommended by the Select Committee, and if that motion is made and not affirmed, then the clauses must be considered for settlement as they stood when the Bill was read in Council."

The HON'BLE SIR HENRY HARRISON said:—"The motion before the meeting was that the report of the Select Committee be taken into consideration. Until that was affirmed he could not go on with the next motion. He had nothing further to say except this, that the Hon'ble the Legal Remembrancer was put upon the Select Committee in order that they might have the benefit of his advice, and he thought that instead of absenting himself from the last Committee meeting, he might have remained and pointed the objections he had now taken.

Instead of doing so, he muttered something about breaking the rules and left the room. Substantially the Committee had made no change at all; substantially the Bill provides a machinery for the better management of these public Muhammadan cemeteries in which at present there were no means of looking after interments. Portions of these Muhammadan cemeteries, in some cases by express arrangement in the most formal manner possible, in other cases by custom, were set apart for Hindus. It was understood when bringing in the Bill that a Muhammadan Burial Board would have looked after all these interments, and there was no reason to apprehend that they would have any objection, nor that the Vaishnavs, who bury their dead in these cemeteries, would put forward any objection. But the Committee were informed on very good authority, by one of their own colleagues, that a Muhammadan Burial Board would object to be charged with that duty, and we were therefore placed in a difficulty. There were certain pieces of ground quite as insanitary as those for the burial of Muhammadans which were set apart for Vaishnavs and other castes, and a Muhammadan Burial Board refusing to take charge of them. What was to be done? Was the difficulty to be shirked? The Committee thought it best to separate those pieces of ground from the Schedule, and let the official members of the Board take charge of them. Whether in so doing they had technically exceeded their power or not, it would be difficult to show any better or simpler escape from the dilemma."

The HON'BLE DR. MAHENDRA LAL SIRCAR said:—"The Bill, it must be admitted, as it has been amended by the Select Committee, is a different Bill from that which had been originally introduced, and on that ground the Hon'ble the Legal Remembrancer objected to it. I thought at the time that a change in the title of the Bill would meet his objection, and accordingly a change in the title has been made by the Committee. I now beg to submit that a change in the short title of the Act might satisfy the hon'ble member; I would, therefore, suggest that instead of calling it 'the Mahomedan Burial Boards Act,' it might be called 'The Non-Christian Burial Boards Act.'"

The HON'BLE MR. ALLEN said:—"May I, Sir, be allowed to offer an explanation. I have not been able to hear what he said for myself, but from my neighbour, the member on my left, I understand the hon'ble member in charge of the Bill has said that the Select Committee had fallen into the dilemma because I had not attended the meeting of the Committee. I wish to inform the Council that I was present at the meeting of the Committee which was formally called, and when I found the hon'ble member throwing out feelers in the direction he has subsequently worked, I distinctly pulled him up several times, pointing out that the Bill was a Bill for the appointment of a Muhammadan Burial Board and nothing more. After the last meeting of the Council, and without any formal notice, I was informed that the hon'ble member wished to take further measures in that direction, and I distinctly told the hon'ble member who has just spoken that the thing could not be done. The hon'ble member opposite, who specially represents the Muhammadans, was sitting next to the hon'ble member in charge of the Bill, and I pointed out to them both distinctly that the Bill was a Bill for a Muhammadan Burial Board and nothing more; that if he had contemplated the introduction of a section such as that which had been added to the Bill, he should have introduced a Bill for a Muhammadan and Chamar Burial Board. I repeatedly pressed it upon him that he could not proceed in that way, and I pointed out to him that the only way open to him was either to give up this additional and independent Burial Board or to introduce a supplementary Bill for the purpose: so that, in fact, there was no want of pressing my views on the Committee, and the blunder, if a blunder it be, which the hon'ble member has fallen into, is a blunder into which he has deliberately and consciously fallen."

The HON'BLE SIR HENRY HARRISON said: —"His memory differed materially as regards the Hon'ble Legal Remembrancer's action. He, no doubt, showed great unwillingness to consider the amendments, but his objections, instead of being clear and definite, and referring to rule and chapter as to-day, were enigmatical and curt in the extreme. Why could he not stay five minutes and explain himself as he had done to-day? Certainly no specific rules of the Council were ever referred to by him in the Select Committee."

The HON'BLE SIR CHARLES PAUL said—"It strikes me that what has occurred is the result of that which has come to light in the course of investigation. I do not think that if the hon'ble member in charge of the Bill had anticipated the difficulty which has arisen, he would not have provided for it in the Bill which he introduced: But in the course of the discussions which took place in Committee it turned out that a Muhammadan Burial Board would not deal with that portion of a Muhammadan burial ground in which Hindus were buried, and that being so, there was a difficulty to be met, and the member in charge of the Bill dealt with that difficulty, and the outcome has been the insertion of clauses (sections 6 and 14) which, I must say, contain something beyond what was contained in the Bill as it was introduced, as not only are certain burial grounds excluded from the Schedule, but new matter introduced into the Bill. I think the Hon'ble Sir Henry Harrison should now ask leave to introduce a Bill with those additional clauses, that the rules should be suspended, and that the Bill should then be read in Council and referred to the Select Committee at once and reported upon next week. It would involve a week's delay if the objection is persevered in."

The HON'BLE SIR ALFRED CROFT said:—"The Statement of Objects and Reasons which accompanied this Bill referred, of course, to Muhammadan burial grounds chiefly, but the actual wording is—'cemeteries and burial grounds in the neighbourhood of Calcutta which have hitherto been under no adequate control or supervision.' This especially applies to the public cemeteries in which large numbers are annually interred. If, then, you raise the mere formal question whether the inclusion of a new section and an addition to the title are consistent with the directions given to the Select Committee, I doubt whether there is anything in the Statement of Objects and Reasons which is opposed to that view. But, passing beyond the question of form to the merits of the case, I would point out that the Select Committee had to make a report. In what terms was that report to be couched? It was elicited in the course of the discussions in Committee that for years past certain portions of the Muhammadan burial grounds had been used for the burial of other persons, and we were informed that a kind of prescriptive right had been established. It was impossible to ignore facts of this kind, and the Committee had to provide in the best way they could for the new circumstances they found to exist. They could only do so by a material alteration in the form of the Bill. But it also seems to me that the action of the Select Committee involves the Council in no difficulty. The case is fully met by clause (8) of Rule XV, which provides that, 'if after settlement of the clauses the Bill differs materially upon any important point from the form in which it was read in Council and published, it may be again published as amended, and reconsidered after such time as the Council may order.' As it appears to me that there has been a substantial change in the Bill, that, I think, should be the course which should be adopted."

The HON'BLE THE PRESIDENT said:—"I take it that the error in form which has been pointed out is one which the Council are perfectly able to condone if they like, and that there is no kind of objection, if we think fit, to our taking the Bill into consideration in the form in which the Select Committee has submitted it. I quite agree that, as far as this is a new Bill, the Council would be wrong to pass it without taking advantage of clause 8 of the rule and putting it for another term before the public; but I do not think we are precluded from taking it into consideration as it stands."

The Motion was put and agreed to.

The HON'BLE SIR HENRY HARRISON also moved that the clauses of the Bill be considered for settlement in the form recommended by the Select Committee.

The Motion was put and agreed to.

The HON'BLE SIR HENRY HARRISON also moved that in the preamble of the Bill the words 'and for the interment of persons other than Christians or Muhammadans' be inserted after the words 'Muhammadan burial-grounds'; and that the short title of the Act be omitted from section 1.

The Motions were put and agreed to.

The HON'BLE SIR HENRY HARRISON said—"The next motion which stands in my name is to move the passing of the Bill, but after the discussion which has taken place, to do so may have the appearance of hasty legislation, and I ask leave to move instead that the Bill, as amended, be republished for not less than one month. The last clause of the Bill would admit of placing such burial grounds as the Chinese and Jewish burial grounds under this new Board, and although this is not definitely contemplated it is desirable to ascertain whether these bodies have any objection to this Bill. On that ground it is very desirable to republish the Bill, so that, if these bodies protest against any interference with their cemeteries, the wording of the section can be altered."

The Motion was put and agreed to.

PROPOSED CENTRAL ROAD FROM THE HOWRAH BRIDGE TO THE SEALDAH RAILWAY STATION.

The HON'BLE SIR HENRY HARRISON moved for leave to introduce a Bill to enable the Commissioners for making Improvements in the Port of Calcutta to lend the Corporation of Calcutta a sum of money. He said:—"As the objects of this Bill have been sufficiently explained, and as the subject is one which has been much discussed in public, it is not necessary for me to say more than that this Bill is in aid of the construction of the new road from the Howrah Bridge to Sealdah, which the Municipal Commissioners have decided to construct."

The Motion was put and agreed to.

The HON'BLE SIR HENRY HARRISON applied to the President to suspend the Rules for the conduct of business to enable him to move that the Bill be read in Council.

The HON'BLE THE PRESIDENT having suspended the rules, the HON'BLE SIR HENRY HARRISON moved that the Bill be read in Council.

The Motion was put and agreed to.

The Bill was read accordingly.

The HON'BLE SIR HENRY HARRISON also moved that the Bill be referred to a Select Committee, consisting of the Hon'ble Mr. Allen, the Hon'ble Mr. Moore, the Hon'ble Dr. Rash Behari Ghose, and the Mover.

The Motion was put and agreed to.

ADJOURNMENT OF COUNCIL.

The HON'BLE THE PRESIDENT said:—"The only Bill we have ready to be passed now is the Private Fisheries Bill, which, if it were not for the peculiar wording of our rules, might well be passed to-day. The rule to which I refer does not exist in the Legislative Council of the Viceroy, and I think it is peculiar to this Council. It is this, that any amendment made in the wording of a Bill, however slight it may be, prevents the Council from passing the Bill on the same day. Practically in this Bill we have done all that is necessary, and we are ready to pass it; but we must defer its passing to another meeting. I understand that the Hon'ble and learned Advocate-General will not be here on Saturday next, but may be able to attend on Wednesday. I shall therefore adjourn the Council to Wednesday next, when, if the Advocate-General be unable to attend, the Legal Remembrancer will carry the Bill through. There will remain the Muhammadan Burial Boards' Bill, which will have to be before the public for another month, and the Select Committee on the Bill which has just been introduced for enabling the Port Commissioners to lend money to the Corporation of Calcutta for constructing the new road cannot, under the rules, submit their report in less than a month; so that these two Bills can be ready for consideration together after the expiry of that period. Early in July I hope to be back in Calcutta, and I propose that we should then take up these two subjects."

The Council adjourned to Wednesday, the 15th May, 1889.

CALCUTTA;
The 15th May, 1889.

C. H. REILY,
Assistant Secretary to the Govt. of Bengal,
Legislative Department.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 and 25 Vic., cap. 67.

THE Council met in the Council Chamber on Wednesday, the 15th May, 1889.

Present:

The HON'BLE SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding.*
The HON'BLE SIR CHARLES PAUL, K.C.I.E., *Advocate-General.*
The HON'BLE P. NOLAN.
The HON'BLE T. T. ALLEN.
The HON'BLE SIR HENRY HARRISON, KT.
The HON'BLE SIR ALFRED CROFT, K.C.I.E.
The HON'BLE DR. MAHENDRA LAL SIRCAR, C.I.E.
The HON'BLE C. H. MOORE.
The HON'BLE SHAHZADA MAHOMMED FURROKH SHAH.
The HON'BLE DR. RASH BEHARY GHOSE.
The HON'BLE RAJA RAMESHWAR SINGH, BAHADUR.

The HON'BLE SIR CHARLES PAUL moved that the Bill for the protection of the right of fishing in private waters, as settled in Council, be passed.

The Motion was put and agreed to.

The HON'BLE SIR HENRY HARRISON moved that the Hon'ble Dr. Rash Behary Ghose be added to the Select Committee on the Bill to consolidate and amend the law relating to the Port of Calcutta, and to the appointment of Commissioners for the said Port.

The Motion was put and agreed to.

The Council adjourned *sine die.*

CALCUTTA;
The 20th May, 1889.

C. H. REILY,
Assistant Secretary to the Govt. of Bengal,
Legislative Department.

REPORT OF THE CHEMICAL EXAMINER TO GOVERNMENT FOR 1888.

RESOLUTION.

MEDICAL.

Calcutta, the 13th May 1889.

READ—

A letter from the Inspector-General of Civil Hospitals, No. 2753, dated the 26th March 1889, forwarding the report of the Chemical Examiner for 1888.

Read also—

The Report for 1887, and the Resolution recorded on it.

There has been some delay in the submission of the report in complete form by the Chemical Examiner.

The following table shows the general nature of the work done during 1888 as compared with 1887:—

	1887.	1888.
Medico-legal—		
Human viscera tested for poison	233	199
Animal ditto ditto	119	122
Fowls' ditto ditto	...	2
Substances suspected to be, or to contain poison, including cattle poison	594	591
Articles tested for blood stains	180	246
Ditto for seminal stains	54	61
Articles tested for purity and quality—		
Potable water	47	61
Petroleum and inflammable oils	212	268
Lime-juice	15	9
Opium confiscated	119	52
„ from the Board of Revenue, Lower Provinces	4	6
Salt	9	186
Ghee	10	37
Spirit for deleterious adulterations	8	18
Spirit determinations for the Collector of Customs ...	139	172
Small Arms Ammunition Factory, Dum-Dum ...	402	373
Fort William Arsenal	22	4
Ishapore Gunpowder and Cossipore Shell Factories ...	3	...
Medical Store Department	14	1
Telegraph Store „	8	10
Commissariat „	96	117
Army Clothing „ Alipore	2	...
Other departments	112	78
Total ...	2,402	2,613

In addition to the above, 26 reports were submitted on technical questions. The preparation of these reports necessitated in many instances the performance of a series of analyses.

The number of medico-legal examinations performed during the year was 1,221 against 1,180 in 1887. Among these the most important were those of human viscera; in 12·6 per cent. of those examined, arsenic, and in 26·13 per cent. opium, were detected, while other poisons were found in 6 per cent. of the cases. Poison was detected in 44 22 per cent. of the viscera against 44·6 per cent. in 1887.

Dr. Warden has continued to investigate the properties of a number of indigenous drugs, and is now engaged in editing a new edition of Dr. Dymock's Materia Medica of Western India, which contains a history of the principal drugs of vegetable origin met with in India.

The report on tube-wells is said to be nearly ready. The Lieutenant-Governor hopes it will be submitted to Government without further delay.

The thanks of the Lieutenant-Governor are due to Dr. Warden for his report, and for the good work he and his assistants have done during the year.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Chief Secretary to the Government of Bengal.

DISTRESS IN THE PATNA DIVISION.

REVENUE DEPARTMENT—FAMINE.

Calcutta, the 14th May, 1889.

RESOLUTION.

READ—

A letter No. 225GF, dated the 6th May, 1889, from the Officiating Commissioner of the Patna Division, reporting on the condition of the people and the prospects of the crops in the districts of that division for the fortnight ending 30th April, 1889.

The spring has been less favourable than was anticipated in regard to weather, the yield of opium, *cheena*, and mangoes has been deficient, while a recent report from the Director of the Department of Land Records and Agriculture, Bengal, shows a marked deficiency in the *rubbi* harvest of the Province generally. Prices, both wholesale and retail, have risen everywhere, and, until rain falls, there will be less employment than heretofore for the working classes. The season is undoubtedly one of pressure, but it would appear that the arrangements made are adequate. The Lieutenant-Governor has recently sanctioned in full the allotments for loans under the Land Improvement and Agriculturists' Loans Acts applied for by the Commissioner, in the full belief that they will be used with caution and discretion.

Rani Rajbansi Koer.
Baboo Harihareudra Sahai.
Mussamut Dulhin Golab Kunwar.
Baboo Damudor Deb Narain Sing.
Kumar Satrajit Protap.
Mussamut Jagatrup Koer.
" Malikrani Koer.

2. The thanks of the Lieutenant-Governor have been communicated to the zemindars of Sarsund, named on the margin, for their contributions towards the cost of relief operations in the distressed tracts lying within their zemindari, in the Sitamarhi sub-division.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Commissioner for information, and that a copy, with a copy of the Report, be submitted for the information of the Government of India.

Ordered also that this Report and Resolution be published in the next issue of the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Govt. of Bengal.

No. 225GF, dated Bankipore, the 6th May 1889.

From—JOHN BOXWELL, Esq., Offg. Commissioner of the Patna Division,

To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to submit my report on the condition of the people and the prospects of the crops for the fortnight ending 30th ultimo.

PATNA.

2. The weather throughout the fortnight has been favourable for the threshing and winnowing operations which have almost been completed. The prices of food-grains are daily rising all over the district. The following table shows the prices ruling during the fortnight as compared with previous fortnight:—

	SUDDER.		BARH.		DINAPORE.		BEHAR.	
	Past fortnight.	Present fortnight.	Past fortnight.	Present fortnight.	Past fortnight.	Present fortnight.	Past fortnight.	Present fortnight.
Coarse rice	14 5	13½	12½	12¾	15	11½	14¾	14¼
Indian-corn	19	19	18	16¼	21	17½	21½	17¾
Wheat	15	15	15	14½	14½	13½	16½	15¼
Barley	25	20½	22	19	23	21	[illegible]	23½
Gram . ..	23	20	21½	20	24	21	[illegible]	19¼

SARUN.

3. The Collector reports that the harvesting of the *rabi* crop has been completed with an outturn of 12 annas, as expected. Opium weighments have also been completed. There are no important food-crops on the ground at present deserving of notice.

The following table shows the prices-current of chief food-grains during the past fortnight as compared with the preceding one :—

	Fortnight ending 30th April.	Fortnight ending 15th April.
Wheat	14½	17
Rice	12-14	12
Marua	20	20
Gram	20-8	21-4
Indian-corn	19-8	20
Arhar	21	22-8

The increase in the prices of the *rabi* crops, notwithstanding the coming of the new crop into the market, is attributed partly to exportation and partly to the combination of the local *bunias*. The Collector states that the local stocks are as full as in ordinary years, and hence there is no room for apprehension.

In Sewan subdivision the prices are the same as in Chupra, with slight variations, while in Gopalgunge they are somewhat higher, the rise in prices being attributed to large exportation from that subdivision.

SHAHABAD.

4. The only crops on the ground at present are cheena and sugarcane. Cheena is being cut with an average outturn, and sugarcane is doing well.

The quotations from the market during the fortnight under report (noted below) show a marked rise in the prices of food-grains, and the cause is reported to be demand for exportation.

	Seers.
Best rice	9¾
Common rice	13½
Wheat	15
Gram	26
Barley	19
Peas	20

The condition of the people remains unaltered.

GYA.

5. *Area affected.*—The area affected remains the same.

6. *General state of the affected tracts.*—No change in the state of the affected tracts, except that the number of labourers on relief works are increasing, as the harvesting of crops is nearly over.

Sugarcane and cheena are the only crops standing on the ground. There was no rainfall during the fortnight. There is undoubtedly considerable pinching all over the district owing to the *rabi* crop not having fulfilled its expectations.

Public health continues good.

7. *Public Works.*—An experimental test work was opened again at Kawakole, but there was no attendance of labourers. It is said that more than 200 coolies are already working under Mr. Christian and Babu Dirgopal Lal on mica mines, where they get one and a half to five annas per diem, and that about 600 labourers are working at Husua in the building of houses of Babu Dirgopal Lal and his brothers. Zemindars are now employing large number of labourers on Gilandazi work.

The attendance at the Sarawan relief works reached its highest point during the last fortnight.

The number of persons employed during the fortnight under the system of payment-by-result and task-work was 70 and 522 respectively.

About 200 persons were employed on earthwork, carried on through tuccavi loans.

8. *Stocks of grain, selling prices.*—The stock of grain is reported to be sufficient. Common rice is selling at 13½ to 14 seers at Gya, 15 seers at Nowada, and 17 seers at Aurungabad.

9. *Gratuitous relief.*—No expenditure during the fortnight.

10. *Advances.*—No advances under the Land Improvement and Agricultural Loans Acts could be made for want of fresh sanction of the allotments applied for in my letter No. 194G—F, dated 6th April 1889.

The amount allotted to the district lapsed at the end of the year before the necessary enquiries preliminary to distribution could be completed. Several enquiries are now complete, and the Collector is awaiting allotment to make advances.

MOZUFFERPORE.

11. *Area affected.*—Same as before.

12. *General state of the affected tract.*—No rain has fallen during the fortnight, and there has been a perceptible rise in prices, as will be seen from the quotations given below. There can be no improvement in the prospects until a fall of rain facilitates agricultural operations.

Names of Police Stations.	Rice.		Maokai.		Marua.	
	Fortnight under report.	Previous fortnight.	Fortnight under report.	Previous fortnight.	Fortnight under report.	Previous fortnight.
Sonbursa	11	13	16	19	16	19
Sursund	10-7	13¼	14-10	18½	14-10	17
Majrgunge	12-9	12-5	19	20	19	20
Bela	10-12	12¾	15-1	17¼	16-6	17¾
Sonbursa	11-6	13	......	18	16-3	16-13

The Collector has sent a supplomentary note on the cheena crop. He says 5,000 acres have been grown in the Sitamarhi subdivision, of which 2,000 only are in the affected tract. The expected outturn is only 2 annas, giving 6,500 maunds for the subdivision and 2,600 for the affected tract. Want of moisture and the strong west winds spoiled the crop.

13. *Public Works.*—The number of persons employed on different kinds of works during the fortnight is shown below as compared with the previous fortnight:—

	Fortnight under report.	Previous fortnight.
Civil agency works	1,175	612
Professional agency works	2,943	3,543
Private tank work	4,413	3,462

It will be seen that the number of persons employed on civil agency works and on private relief works has risen considerably. The number employed on professional agency works has fallen, but there was a sudden rise in the number of coolies working in the Shewhur road from 355 to 700 on the 27th ultimo, and it is believed that the number of labourers on professional agency will rise during the present month.

14. *Gratuitous relief.*—Expenditure under this head amounted to Rs. 134. A large number of persons received gratuitous relief from the Maharajah of Durbhunga and other zemindars.

It will be observed that the Collector of Mozufferpore has a class "Professional agency" works, new in this report. This is clearly a wrong classification. We have no "professional agency" works in progress. The Collector probably means District Board works. The mistake is unimportant, but will be corrected.

DURBHUNGA.

15. Accounts are so far favourable that no new or sudden cause for anxiety has arisen, and that the reports of the comparative tightness of pressure in the different circles are confirmed.

16. *Area affected.*—No change.

17. *General state of affected tract.*—Circles A and B, and of these two circles A, still show the greatest pressure. Mr. Grier writes:—

"The failure of rain during the past month has tended to darken prospects."......"Moisture is badly wanted for mung and muswa."......"The former is suffering severely from the drought."......"The late winds have ruined more than 75 per cent. of the (mango) fruit."...... "There is no symptom of distress in these tracts (circles C and D.)."......"Public health continues to be good."

About civil agency works he writes:—

"The labour returns show a large increase in the number of workers employed on these works, the daily average having risen from 2,469 in the second week to 3,628 at the close of the month."......"The increase is visible in circles A and B, there being a falling off in the past few days in the attendance on the Ladaffa-Laukahi road."......"A considerable quantity of Government *paisa* has been issued to petty contractors to distribute as wages, and little objection has been raised by shop-keepers or labourers."......"The 'figures' of the tank at Bulwa opened for the relief of non-able-bodied labourers show no increase, the daily average in the former period being 227."

A good deal of work is now being done by private agency. Mr. Grier gives attendance figures—

Men	...	1,611
Women	...	405
Children	...	361
	Total ...	2,377

But as I am in correspondence with Mr. Beadon on this subject, I only add here that the total under this head is probably much larger.

Two applications for small loans lately received will probably be granted.

18. *Gratuitous Relief.*—No gratuitous relief has been given by the Collector. That given by the Mohunt of Motihari is considered to be sufficient. Mr. Grier writes:—

"No unfavourable symptom has appeared in this neighbourhood (Rampur-Modhuapur, the worst part of the worst Circle A) during the present month."

Prices are rising everywhere, and will probably continue to rise till rain falls.

Crime shows an increase, probably due in part to the scarcity.

Mr. Beadon gives an abstract of attendance on works, which I divide differently, keeping his table exact:—

	Men.	Women.	Children.	Total.
Civil agency and District Board works ...	7,238	166	227	7,631
Private agency and on advances	1,852	439	353	2,644
Total ...	9,090	605	580	10,275

Points of importance are these—

Prices are rising in spite of the completion of the *rabi* harvest.

Even in the worst parts there are no new bad symptoms. Crime returns show an increase, though not great. Weather is bad. Rain is wanted.

CHUMPARUN.

19. *Area affected.*—No change under this head.

20. *General state of the affected tract.*—Rain is now wanted for agricultural operations throughout the district. The cheena crop in the affected area is a pronounced failure for want of rain. It has already withered on high, and is fast dying in the low lands. Opium weighment is finished, and the outturn is smaller than that of the previous year.

The Collector writes:—

"The condition of the lower classes in the affected tract is no doubt straitened, and if no rain falls within the next fortnight the pressure upon this will go on increasing. They have at present nothing to look forward to except relief works for their support. There has been an increase of nearly 1,000 labourers as compared with the previous fortnight; the canoongoes describe the position as very gloomy indeed, and destitution is clearly spreading."

Public health continues good.

21. *Public works.*—The number of persons who found employment in the several classes of works is estimated as follows:—

On civil agency works	8,428
On District Boards' works...	437
On works carried out by means of loans	1,100
	9,965

The markets are still sufficiently supplied, but the prices are gradually rising, and have already risen, as the following quotations will show:—

	This fortnight.			Last fortnight.		
	Srs.		Srs.	Srs.		Srs.
Common rice	11¼	to	12¼	12¼	to	14
Dhan	18½			19½	,,	20
Indian-corn	17¾	to	18¼	18¼	,,	19¼

22. *Advances.*—During the past fortnight the expenditure under this head was as follows:—

Under Land Improvement Act	300
,, Agriculturists Loans Act	1,055

On receipt of Government orders No. 1505—156F, dated 16th ultimo, the Collector stopped sanctioning loans, except to chowkidárs in the affected area whose pay was in arrears. He says that it is inadvisable to stop altogether making advances to the ryots, as this is the most pressing time, and comparatively few ryots can obtain sufficient support from mahajans.

23. *Gratuitous relief.*—The expenditure under this head was Rs. 78-7-6.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 18th May 1889.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.		*Western Districts.*		
Burdwan Divn.	1	Burdwan May 18, '89	2·16	Weather—seasonable where rain has fallen. More rain badly wanted throughout the district. Prices easier, varying from 14 seers per rupee at Culna to 16 seers at Burdwan.
		Culna ...	0·12	
		Raneegunge ..	0·15	
	2	Bankoora " 18, '89	1·21	Weather—cooler. The late showers have facilitated ploughing, and have done much good to the standing crops. Price of common rice stationary.
	3	Birbhum " 18, '89	Nil	Weather—still very hot, but not so bad as it has been. Clouds gather every evening. No crops to report on. Prices still stationary all over the district at from 15 to 13¼ seers per rupee.
		Rampur Hât ...	0·80	
	4	Midnapur " 18, '89	0·22	Weather—cooler; evenings cloudy, but no rain. Agricultural work at a standstill for want of rain. Price of rice at Midnapore Rs. 2-9-3, Contai Rs. 2-8, Tumlook Rs. 2-13, and Ghatal Rs. 2-8 per maund.
	5	Hooghly " 18, '89	......	Weather—warm. Agricultural operations retarded for want of rain. Sugarcane suffering. Price of rice at Jehanabad Rs. 2-8, Serampore Rs. 3-4, and Hooghly Rs. 3-8 per maund.
		Serampore ..	0·47	
		Jehanabad ...	0·07	
		Howrah " 18, '89	0·05	Weather—hot. Rain wanted. A good shower on 19th at Sudder; whether it was general not yet known. *Boro dhan* harvested; estimated outturn 10 annas in the Sudder sub-division *Amun* rice at head-quarters 12 seers per rupee and in the sub-division 13¼ seers.
		Central Districts.		
Presidency Divn.	6	24-Perghs. May 18, '89	0·12	Weather—very hot, windy with passing clouds. Rain much wanted. Price of rice varies from 12¾ to 15 seers per rupee
	7	Nuddea " 18, '89	0·12	Weather—very hot with strong south wind, and occasionally cloudy. Ploughing of land for early rice nearly finished. Sowings going on in the Kushtea, Meherpore and Chooadanga sub-divisions, where recent rain has done much good. Indigo and sugarcane doing well. No sowings commenced at Sudder and Ranaghat for want of rain.
		Kooshtea ...	1·26	
		Meherpur ...	1·57	
		Chooadanga ...	1·25	
		Ranaghat ...	0·09	
	8	Khoolna " 18, '89	0·22	Weather—hot with high winds A little rain has fallen, but not enough for ploughing, and work is consequently falling behind. *Boro* harvest nearly completed. *Til* harvest going on. No other crops on the ground.
	9	Jessore " 18, '89	0·48	Weather—very hot. The rainfall of the week has done some good to the sowings, but it is inadequate. More rain is wanted. About 10 and 7 annas of the proper areas under cultivation have respectively been sown with indigo and jute. Prospects considered gloomy owing to drought. Prices still rising.
		Jhenidah ..	1·31	
		Magura ...	0·78	
		Narail ...	0·55	
		Bongong ...	0 41	
	10	Moorshedabad " 18, '89	5 01	The extreme dry hot weather has broken up with a series of thunderstorms with heavy rain. There has been copious rain over the greater part of the district, which has enabled the sowing of *aus dhan* to begin, and has much benefited the mulberry crop, and jute and sugarcane. Cattle disease has broken out in thana Kalyangong
		Lalbagh ...	3·60	
		Kandi ...	0·30	
Rajshahye Divn.	11	Dinagepur " 18, '89	Nil	Weather—hot with westerly and easterly winds. Prospects are bad. Jute is reported to have completely failed in some parts for want of moisture. *Aus* seedlings are withering, and only half the usual area of sugarcane has been planted out. Coarse rice selling at 13 seers per rupee.
	12	Rajshahye " 18, '89	0·32	Weather—hot; strong winds. Rain urgently required. Rice selling at 15¼ seers per rupee.
		Nattore ...	0·09	
		Nowgong ..	0·01	
	13	Rungpore " 18, '89	0 90	Weather—cool and cloudy with high winds from north-east. The rainfall appears to have been pretty general, and it has improved the prospects of the crops. More rain is however wanted, and the deficient water-supply is telling on the public health.
		Kurigram ...	0·51	
	14	Bogra " 18, '89	0·71	Weather—very variable. Showers fell over small areas Jute and paddy are still being sown, but the seedlings in many places are stunted and in some places withered. Prospects of sugarcane and *til* are also unfavourable. More rain is wanted, especially in the middle and west of the district Cattle disease is rather prevalent. Coarse rice is selling at 17 seers per rupee
		Sherpore ..	0·34	
		Nowkhilla	1·73	
	15	Pubna " 18, '89	0·11	Weather—hot with occasional local storms Good rain in the Serajgunge subdivision and parts of the Sudder sub-division has much improved the *aus*, jute and sugarcane sowings. *Aus* and jute are still being sown. More rain is wanted. Coarse rice sells at 14 or 15 seers per rupee
	16	Darjeeling " 18, '89	0·87	Weather—still rather unsettled at head-quarters. More rain wanted in Terai Crop prospects are fair.
	17	Julpigoree " 18, '89	0·44	Weather—hot and cloudy with high east wind at intervals. Sowing of *bhadoi* and jute still going on. Sugarcane is being planted. More rain wanted Common rice sells at Rs. 2-8 per maund.
		Eastern Districts.		
Dacca Divn.	18	Dacca May 18, '89	1·68	Weather—hot with high winds. Rice and jute are still being sown. About 8 annas of rice and 9 annas of jute have been sown. Recent rain has been beneficial to the crops already sown. Jute plants in places in the Manickgunge sub-division have been damaged by insects.
	19	Furreedpur " 18, '89	0·32	Weather—hot. Rain very much wanted for paddy crop. Rice selling at 11 seers per rupee at head-quarters.
	20	Backergunge " 18, '89	0·93	Weather—hot. Ploughing for *aus dhan* progressing; more rain wanted.
	21	Mymensingh " 18, '89	2·34	Weather—variable with storms. There has been a great storm in Tangail resulting in loss of life. Jute sowings are complete, and *aus* paddy sowings are nearly so. Jute has been sown on 16 annas of usual area. *Aus* paddy will also have been sown on 16 annas of usual area. Prospects are generally good except in Tangail. In Jamalpur prospects are now better, as moderate rain has fallen there.
		Tangail ...	4·22	

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
		Eastern Districts—concld.		
CHITTAGONG DIVN.	22	Chittagong May 18, '89	0·59	Weather—seasonable. *Aus* is being sown, and the state of other crops fair.
	23	Noakholly „ 18, '89	0·89	Weather—very hot and cloudy. Extent of *aus* sowings reported to be 14 annas. All suffering from want of rain, and in some parts a complete failure is apprehended. *Supari* crop bad in parts. State of cattle bad. Outturn of *rubbi* will probably not exceed 10 annas. A water famine in some parts. Rain urgently wanted.
	24	Tipperah „ 18, '89	1·64	Weather—hot with storms. *Aus dhan* and jute sowings completed. *Amun* sowings nearly finished. More rain wanted in the Chandpur sub-division.
	25	Chittagong Hill Tracts. „		Report not received.
		Hill Tipperah „ 18, '89	1·95	Weather—warm and unsettled. Chillies are being gathered. Prospects of jute and sugarcane fair. *Aus* paddy is being sown.
BEHAR				
PATNA DIVN.	26	Patna May 18, '89	Nil	Weather—very hot. Harvesting of *boro* rice and *cheena* going on. Sugarcane doing well Prices of food-grains almost stationary. In Behar prices are rising by degrees.
	27	Gya „ 18, '89	Nil	Weather—very hot. Sugarcane is being irrigated and coming on well. Prices of food-grains rising.
	28	Shahabad „ 18, '89	Nil	Weather—extremely hot with variable winds. Very little on the ground except sugarcane. Prices rising slightly, but supplies in markets plentiful.
	29	Durbhunga „ 18, '89	Nil	Weather—excessive heat during the day. Drought continues, and *cheena* and *mung* severely damaged by it. Indigo is bearing up, but is in need of rain. Price of common rice ranges from 11 to 12½ seers per rupee.
	30	Mozufferpur „ 18, '89	Nil	Weather—very hot; occasionally cloudy. Rain is much wanted. No crops on ground except indigo.
	31	Sarun „ 18, '89	Nil	Weather—very hot and dry. *Cheena* is being irrigated. Rain badly wanted for *cheena* and indigo.
	32	Chumparun „ 18, '89	Nil	Weather—hot, with varying winds. Rain is wanted in every part of the district, especially for *mung* and paddy which have been sown in places, and for indigo. Prices continue to rise.
BHAGULPORE DIVN.	33	Monghyr „ 18, '89	Nil	Weather—very hot and sultry. Lands are being prepared in the Begooserai sub-division for the ensuing *bhadoi* crops. Rain wanted everywhere. Prices of food-grains still rising.
	34	Bhagulpur „ 18, '89	Nil	Weather—very hot with alternating west and east winds. Rain urgently wanted. Light lands are being ploughed, but operations for *bhadoi* are generally very backward. Low-land rice and *mung* are suffering in the north, and prospects there are bad. Indigo poor. Prices remain high.
	35	Purneah „ 18, '89	Nil	Weather—hot and dry. There are no crops. The drought has put a complete stop to agricultural operations.
	36	Maldah „ 18, '89	Slight rain on 15th.	Weather—mornings and evenings somewhat cool, but days very hot; hard easterly wind on two days. Rain much needed everywhere. Harvesting of *boro* paddy continues with a fair outturn. On the average 11 annas of *bhadoi* paddy sown. Rain has done some good to *bhadoi* in Nowabgunge thanah, but injury is being done to it and to jute and indigo plants in north of district for want of rain. Price of rice still rising.
	37	Sonthal Perghs. „ 18, '89	Nil	Weather—intensely hot. Sugarcane, indigo and *bhadoi* crops suffering for want rain. Prices rising.
ORISSA.				
ORISSA DIVN.	38	Cuttack „ 18, '89	2·30	Weather—dry but windy. Yesterday's (17th) rainfall at and near head-quarters will be much beneficial for ploughing operations. Heavy rain at Banki on the 13th. Sub-divisional officer's report up to 16th states that ploughing for *beali* and *sarad* rice not progressing well for want of rain. Price of rice stationary.
	39	Pooree „ 17, '89	Nil	Weather—hot and cloudy at intervals. Rain much wanted for cultivating lands for *sarad* crops. Price of common rice varies from 21 seers to 14 seers 7 chittacks per rupee in the Sudder sub-division and from 15 seers 12 chittacks to 13 seers 2 chittacks in the Khoorda sub-division.
	40	Balasore „ 17, '89	0·52	Weather—mornings and evenings are pleasant; days very hot. Rain much wanted everywhere. The utter want of rain in the north of the district is likely to prove serious for cultivation and cattle Sugarcane cultivation has commenced, but for want of rain it is planted only on about 10 annas of the usual area. Prices stationary.
CHOTA NAGPORE.				
		South-West Frontier Agency.		
CHOTA NAGPORE DIVN.	41	Hazaribagh May 18, '89	Nil	Weather—very hot and dry with west wind. Sugarcane reported to be suffering from heat and want of moisture in places. No other crops. Want of water beginning to be felt in places. Common rice selling at from 12 to 16 seers per rupee.
	42	Lohardugga „ 18, '89	0·02	Weather—very hot. Slight rain with windy and cloudy weather. Land is being prepared for early paddy. Outturn of lac at head-quarters is not good, being estimated at from 8 to 10 annas. Prices rising in the Palamow sub-division.
	43	Singbhoom „ 18, '89	1·24	Weather—intensely hot during the week. Heavy rain and hail on the 17th. Sugarcane and *boro dhan* doing well. Lac cultivation continues in the Kolhan. Prices stationary.
	44	Manbhoom „ 18, '89	0·21	Weather—very hot. More rain wanted for early ploughings. Scarcity of water prevails in the south. Prices rising.

Published for general information.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years. The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past [illegible] [illegible] divided by the number of stations. A rainy day is one on which [illegible] of an inch fall.

for the week ending Friday, the 17th of May 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for year.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	District Observations. Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1889. Mean for district.	Since 15th May 1889. Normal mean.	Since 15th May 1889. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater.
denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal means years. The means of the district are the numerical average of the rainfall return received in the district, *i.e.*, from total rainfall at the sub-divisional

Statement of Rainfall in Bengal for the week ending Friday (6 p.m.), the 17th of May 1889.

Explanation.—... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 21*st May* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE 17TH MAY 1889.

AT the close of the previous week abnormally high temperature and rather low pressures were reported over the greater part of Bengal At the southern stations also exceedingly strong and very moist winds were reported, and these were bringing up large amounts of moisture over the province. Weather over the greater part of the province was fine, and no rain was falling except at a few stations in and near the hills in North Bengal. On the 11th a further fall of pressure took place, and the stations in the west of the province showed decidedly low pressures, and indeed they formed part of an area of barometric depression which stretched into the North-West Provinces. On the 12th pressure increased briskly over the greater part of Bengal and Assam, but still the low-pressure area in the west of the province was well marked. On the 13th pressure commenced to fall again, but the distribution over the province became rather altered and on this day the lowest pressures were reported from Bhagulpore, Ranigunge, and Bankoora, and winds also showed a slight tendency to cyclonic circulation round the low pressure. This was followed by the development of a few local storms in East and South-West Bengal, but in most instances the storms were not of much importance. On the 14th a further and somewhat rapid fall of pressure took place over Bengal, and a shallow general low-pressure area was apparently formed Following on this, local storms became general at almost every station in South-West and East Bengal, while they were also fairly numerous in the Patna and Bogra districts of North Bengal. On the 15th pressure rose, but the shallow depression was not entirely filled up, and local storms again occurred; but they were not so numerous as on the previous day, though some in the Moorshedabad district were particularly heavy, and Berhampur itself received 4 27 inches of rain On the 16th again pressure increased, and this continued on the 17th over the greater part of the province, and on this day the feeble depression which had previously existed had more then filled up, and pressure had become high and decidedly above the normal in all districts, the excess being larger than a tenth of an inch in Chutia Nagpur, Orissa, and in South and East Bengal and Assam. With this changed distribution local storms almost entirely ceased to occur, and weather became generally fine except in Assam, where rain continued to fall. The wind systems blowing over the province have not changed to any material extent during the week, except in so far as becoming on some days slightly more westerly or more easterly in direction For the greater part of the week strong southerly and south-westerly winds have been blowing in the south-western districts, and south-easterly winds in the eastern and south-eastern districts, and more or less easterly winds in the north of the province. Winds have also continued decidedly strong at the head of the Bay, and the wind velocities at Saugor Island have generally averaged from 25 to 30 miles an hour. Temperature has also continued decidedly high, though in those districts where local storms occurred, temperature fell to some extent, but for the greater part of the week the mean temperature of the province has been largely in excess of the normal.

Conditions during the week have therefore again not been favourable for general rainfall, and though moderately heavy rain has fallen in East, South-West and North Bengal, and lighter rain in Orissa, Chutia Nagpur has been almost rainless, and Behar absolutely rainless. In Assam, on the other hand, heavy rain has continued to fall.

Pressure.—The general variations of pressure during the week have already been referred to. For the whole province of Bengal for the week the mean pressure has been above the normal by 0·016 inch; but while at the southern stations the excess pressure has equalled about 0·04 inch, at the northern stations pressure has been in defect of the normal by about 0 01 inch. In Assam pressure has been in excess by 0·02 inch.

Temperature—Has been above the normal almost throughout the week in all districts except Assam. The mean temperature for the whole province of Bengal has been nearly 6° in excess of the normal for the week, while in Behar and Chutia Nagpur the excess has almost equalled 8°. Very high maximum temperatures have continued to be recorded throughout the week, the highest being 115·5° at Ranigunge for the three days 11th to the 13th. In Assam the mean temperature has been very nearly normal.

Rainfall.—The heaviest rainfall has occurred in East Bengal, the stations in which average 1·40 inches; this, however, is only about two-thirds of the normal fall for the week. In South-West Bengal the average fall has been 0·75 inch, again about two-thirds of the normal In North Bengal the fall equals 0·65 inch, but it has been unequally distributed, and Maldah and Dinagepur have received no rain at all, while Pubna has received decidedly heavy rain. In Orissa an average fall of 0·28 inch is recorded, but Pooree and Cuttack districts have received practically no rain, while in Balasore district the fall averages 0 74 inch. In Chutia Nagpur a few showers only fell in the Singbhoom district, and Behar has been rainless.

In Assam particularly heavy rain has fallen; Sibsagor has received 6·73 inches, Silchar 4·04 inches, and Dhubri 1 47 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 17th May 1889 :—

Meteorological Divisions.	Temperature: Highest observed during week.	Lowest observed during week.	Averages for week: Of highest of each day.	Of lowest of each day.	Of mean for each day. The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, ꓘ thunderstorm.

A. Pedler,

For Offg. Meteorological Reporter to the Govt. of India.

Meteorological Office, Govt. of India;

Calcutta, the 20th May 1889.

MEMORANDUM.

THE leading facts in connection with the mortuary statistics of the districts in Bengal for the month of January 1889 are the following:—

1. The deaths of 126,894 persons were registered out of a population of 66,055,695 in these districts, or at the rate of 23·04 per 1,000 per annum, against 30·12 per 1,000 in the preceding month, and 25·08 per 1,000 in the corresponding month of 1888, indicating, as compared with both the periods, a large reduction in the number of deaths registered.

2. The highest deaths-rates were returned from the undermentioned districts:—

Districts.	Ratio per *mille.*	*Districts.*	Ratio per *mille.*
Backerganj	34·68	Bogra	27·48
Noakhali	31·56	Puri	27·00
Jessore	31·80	Hughli including Serampore	26·40
Tipperah	31·[illegible]0	Midnapore	26·04
Julpaigori	30·72	Birbhum	25·80
Rungpore	30·36	Chittagong	25·68
Khulna	29·64	Howrah	25·56
Balasore	29·64	Murshidabad	25·56
Dinajpur	29·28	Dacca	25·44
Rajshahye	28·20	Pubna	25·32
Purneah	27·96		
Maldah	27·96		

3. The mortality from the specific diseases mentioned in the table appended below, indicates that fever prevailed with considerably less fatality during the month under notice as compared with the corresponding month of the preceding year The fatal results from the other diseases exhibited only fractional differences, excepting injury and the maladies returned under the head of "Other causes," the death-rates from which maintained the same ratios:—

	Ratio per *mille* during— January 1889.	Ratio per *mille* during— January 1888.
Cholera	1·08	·81
Small-pox	·10	·18
Fever	16·92	19·08
Bowel-complaints	·72	·84
Injury	·12	·12
Other causes	3·81	3·81

4. The following table shows the districts in which the death-rates from cholera, fever and "other causes" were highest:—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Howrah	4·32	Julpaigori	29·04	Puri	18·36
Backerganj	4·20	Noakhali	28·56	Backerganj	12·00
Jessore	3·96	Rungpore	28·20	Tipperah	9·60
Tipperah	3·72	Dinajpur	27·60		
Khulna	3·60	Purneah	26·88		
24-Pergunnahs	3·48	Jessore	25·56		
Faridpore	3·12	Maldah	25·20		
Murshidabad	2·64	Rajshahye	24·36		
Midnapore	2·28	Pubna	23·52		
Nuddea	2·28	Bogra	22·20		
Dacca	2·28	Hazaribagh	21·36		
		Khulna	21·12		
		Chittagong	21·00		
		Murshidabad	20·04		

5. In relation to *Sex*, *Class* and *Age*, the rates of deaths during the month under notice stood as noted below:—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	24·84	Christians	15·72	Under 1 year	176·28
Females	21·12	Hindus	21·36	1 and under 5 years	20·04
Ratio of male deaths to every 100 female deaths	115	Mahomedans	26·64	5 " 10 "	9·24
		Buddhists	18·60	10 " 15 "	9·24
		Other classes	18·12	15 " 20 "	14·16
				20 " 30 "	14·76
				30 " 40 "	17·28
				40 " 50 "	23·88
				50 " 60 "	34·68
				60 years and upwards	64·44

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,

The 20th May 1889.

W. H. GREGG, *Dip. Publ. Health, Camb.*,

Sanitary Commissioner for Bengal.

MEMORANDUM.

THE birth and death returns from the principal Municipalities in Bengal afford the following results for the week ending 4th May 1889 :—

1. Births were registered at the rate of 18·2 per 1,000 of population and deaths at 20·1 per 1,000, as opposed to 20· and 24·6 per 1,000, respectively, during the preceding week ending 27th April, showing a considerable falling off in the registration of both the events.

2. The highest proportions of births and deaths were returned from the following Municipalities :—

Births.	Ratio per mille.	*Deaths.*	Ratio per mille.
Darjiling	78·2	Rampore Beauleah	49·9
Rampore Beauleah	47·3	Serampore	45·1
Naraingunj	41·4	Purneah	41·6
Bali	31·6	Gya	36·2
Durbhanga	29·9	Puri	35·7
Monghyr	29·8		

3. The subjoined table indicates that, as compared with the result of the preceding week, there was a considerable reduction in the death-rates from cholera and the maladies classed under the head of "Other causes," but only fractional diminution in the case of the other diseases, the mortality from injury remaining the same as in the previous week :—

	Ratio per mille during the weeks ending— 4th May 1889.	27th April 1889.
Cholera	3·1	4·4
Small-pox	·6	·7
Fever	8·0	8·5
Bowel-complaints	2·2	2·5
Injury	·5	·5
Other causes	5·7	8·0

4. Of the diseases above specified, cholera and "other causes" proved conspicuously fatal in the following Municipalities, and fever only in the Rampore Beauleah town, where the death-rate from this cause stood at 23·6 per 1,000 of population :—

Cholera.	Ratio per mille.	*Other causes.*	Ratio per mille.
Purneah	27·7	Serampore	21·6
Rampore Beauleah	18·4	Puri	21·0
Comillah	18·4	Bhagulpore	13·6
Serampore	7·8		
Gya	6·8		
Howrah	4·6		
Durbhanga	3·1		
Patna	2 6		

5. With regard to mortality referable to *Sex*, *Class* and *Age*, the rates of deaths stood as follows :—

According to Sex.	Ratio per mille.	*According to Class.*	Ratio per mille.	*According to Age.*	Ratio per mille.
Males	20·2	Christians	46 0	Under 1 year ...	168·9
Females	20·0	Hindus	21·0	1 and under 5 years ...	26 7
Ratio of male deaths to every 100 female deaths	109	Mahomedans ...	16·9	5 " 10 " ...	11·7
		Buddhists	51·4	10 " 15 " ...	8·6
				15 " 20 " ...	14 7
				20 " 30 " ...	10·3
				30 " 40 " ...	15·6
				40 " 50 " ...	15·6
				50 " 60 " ...	14·6
				60 years and upwards ...	50·2

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 20th May 1889.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 4th May 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

RESOLUTION ON THE ANNUAL REPORT ON THE WORKING OF THE EDEN SANITARIUM FOR THE YEAR 1888.

MEDICAL.

Darjeeling, the 25th May 1889.

READ—

The Report on the working of the Eden Sanitarium for the year 1888.

Read also—

Report for the year 1887, and the Resolution recorded upon it.

The following statement, which testifies to the growing popularity of the institution, shows the number of patients, with their relatives and attendants, excluding infants in arms, admitted into the Sanitarium during the past five years:—

	1884.	1885.	1886.	1887.	1888.
Patients	153	192	273	344	336
Relatives and attendants	73	68	120	84	107
Total ...	226	260	393	428	443

Of the 443 persons admitted, 48 were admitted in the 1st class, 281 in the 2nd class, and 114 in the 3rd class. Several applications had to be refused owing to want of accommodation.

The daily average number of patients during the year was 39·17 for the nine months the institution was open, against 35·67 in the previous year, while the average stay of each patient was 24·37 days as compared with 22·60 in 1887. Most of the patients admitted were suffering from fever, although there were also many cases of dysentery, rheumatism, tubercular diseases of the lungs, diarrhœa, and affections of the skin. Four deaths occurred during the year.

The receipts from paying patients amounted to Rs. 33,579-2, against Rs. 29,454 in 1887. The total receipts, including balance of the previous year, were Rs. 36,996-0-11, and the expenditure was Rs. 35,778-3-9. The expenditure under the head of European medicines was more than double of what it was in 1887, owing to the fact that two years' supplies were obtained from Europe. The expenditure under the head of Diet, excluding the amount paid on account of 1887, was Rs. 13,759-5-6, against Rs. 12,752-5 in 1887, thus showing an increase of Rs. 1,007, due mainly to the increase in the number of patients.

During the year the Committee paid Rs. 4,801-8-6 of debt, and at the end of the year nothing was owed, except Rs. 800 due to the Superintendent.

The building is in fairly good order, but a dead-house is said to be urgently required, and the Lieutenant-Governor hopes this want will soon be supplied.

The Resident Medical Officer and the nursing staff rendered valuable services to the institution. As the Steward did not give satisfaction his services were dispensed with at the close of the season. The thanks of the Lieutenant-Governor are due to the Committee and the Superintendent for the interest they have taken in the welfare of the Sanitarium.

By order of the Lieutenant-Governor of Bengal,

JOHN EDGAR,

Chief Secretary to the Govt. of Bengal.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FOURTH QUARTER OF 1888-89.

No. 378B., dated Calcutta, the 14th May 1889.

From—K. G. GUPTA, ESQ., Offg. Secy. to the Board of Revenue, L.P.,

To—The Secretary to the Government of Bengal, Financial Department.

SALT. — J. BEAMES, ESQ.

I AM directed by the Board of Revenue to submit the following report on the state of the salt market for the fourth quarter of 1888-89, comprising the months of January, February and March 1889.

2. The quantity of salt of every description cleared during the quarter under report amounted to 21,53,700 maunds 31 seers 13 chittacks, against 24,20,274 maunds 38 seers 9 chittacks in the previous quarter, and 22,01,094 maunds 7 chittacks in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 51,04,008-12, against Rs. 56,74,386 in the previous quarter, and Rs. 42,45,508-4 in the corresponding quarter of the previous year.

3. The quantity of excise salt sold in Orissa during the quarter under review and the quantity which remained in store at the close of the quarter are shown in table I:—

TABLE I.

	Cuttack.			Pooree.			Balasore.		
	MDS.	S.	T.	MDS.	S.	T.	MDS.	S.	T.
Balance at close of the last quarter	359	0	0	1,75,836	10	0	.....		
Manufactured or added during the quarter	......			......			......

Sales during the quarter	127	0	0	29,262	0	0	......		
Wastage	......			167	10	0	......		
Total ...	127	0	0	29,429	10	0	...		
Balance at the close of the quarter	232	0	0	1,46,407	0	0	......		

4. The above statement shows that the total sale of excise salt during the quarter under review amounted to 29,389 maunds, against 34,327 maunds 33 seers 60 tollahs in the previous quarter, and 41,745 maunds 15 seers in the corresponding quarter of the previous year.

5. The subjoined table shows in comparison the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under review and the corresponding quarters of the previous two years:—

No transactions in sea-imported salt have been reported for the quarter from the ports of Cuttack, Pooree and Balasore.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 25th May 1889.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
	Western Districts.		
BURDWAN DIVN.			
1	Burdwan May 25, '89	1·65	Weather—seasonable. The late showers have done much good to the standing crops. Price of common rice at Burdwan 16½ seers, Culna 14 seers, Cutwa 14$\frac{1}{16}$ seers, and Raneegunge 15 seers per rupee.
	Culna ...	2·60	
	Cutwa ...	1·90	
	Raneegunge	3·85	
2	Bankoora „ 25, '89	1·51	Weather—seasonable. Ploughing going on everywhere. Cultivation of sugar-cane commenced. *Til*, indigo, and cotton plants doing well. Common rice 16 seers per rupee at Sudder, but the price is stationary at Bishenpore.
	Bishenpore ...	0·62	
3	Birbhum „ 25, '89	3·18	A very heavy storm with 3·12 inches of rain on the 21st. A slight shower on the 23rd. Rain general all over the district. Temperature pleasant. Ploughing going on after the rain. Price of rice remains 13½ seers per rupee.
	Rampur Hât ...	1·70	
4	Midnapur „ 25, '89	2·14	Weather—rather cooler. There have been heavy local showers in most parts of the district. They have come opportunely for ploughing and sowing. The mulberry and worms both suffered much from the heat. At Ghatal cocoons sold at from Rs. 16 to Rs. 30 a maund during the current month. Price of rice at Sudder Rs. 2-9-3, Tamluk Rs. 2-13, and Ghatal Rs. 2-8 per maund. Prices still rising at several thanas.
5	Hooghly „ 25, '89	......	Slight showers of rain have fallen throughout the district during the week, and the prospects of crops in consequence are looking up. Price of common rice at Jehanabad Rs. 2-9, Serampore Rs. 3-4, and Hooghly Rs. 3-6 per maund.
	Serampore ...	1·44	
	Jehanabad ...	1·22	
	Howrah „ 27, '89	1·15	Weather—rainy. Rain very beneficial, more wanted for paddy. Jute being planted. Best rice 10 seers, common rice 12 seers and cheapest rice 13½ seers per rupee at Sudder station, cheapest rice at Ulubariya 14½ seers per rupee.
	Central Districts.		
PRESIDENCY DIVN.			
6	24-Perghs. May 23, '89	2·71	Weather—hot with occasional nor'-westers and rain. The rain has done great good. Sowing of *aus* and *amun* paddy and jute going on briskly. More rain wanted. Price of rice varies from 12½ to 15 seers per rupee.
7	Nuddea „ 25, '89	1·39	Weather—hot and cloudy with high winds and drizzling rain. Sowings of *aus* paddy are going on. Sugarcane and indigo doing well. Recent rain has done much good to the crops. More rain wanted.
	Meherpur ...	0·73	
	Chooadanga ...	0·05	
	Ranaghat ...	1·62	
8	Khoolna „ 25, '89	0·22	Weather—occasionally cloudy; temperature lower than last week. A little rain has fallen in all parts of the district, and prospects are somewhat improved. Land is being prepared for *amun* and sugarcane. Jute is being sown in the head-quarter sub-division, but the prospects of the crop are not good, and in Satkhira it could not be sown for want of rain.
9	Jessore „ 25, '89	1·42	Weather—hot and cloudy. The recent rain has done much good to the sowings. More rain is still wanted. *Amun*, *aus*, jute and indigo are being sown. Prices still rising.
	Narail ...	0·15	
	Bongong ...	0·62	
10	Moorshedabad „ 25, '89	2·61	Weather—cooler with thunderstorms and passing showers; wind generally south-east. Sowing of *aus dhan* is going on over the greater part of the district. The rain has not visited a small area in the north-east corner of the district.
	Lalbagh ...	1·16	
	Jungipore ...	2·30	
	Kandi ...	4·52	
RAJSHAHYE DIVN.			
11	Dinagepur „ 25, '89	0·14	Weather—fairly cool and cloudy. There have been light showers pretty generally throughout the district, but not enough to do much good to forward sowings or growth of rice and jute seedlings. Heavy rain is badly wanted. Coarse rice 13 to 14 seers per rupee.
	Thakurgaon ...	0·82	
12	Rajshahye „ 25, '89	0·73	Weather—hot and cloudy. *Boro dhan* is being reaped. More rain urgently wanted for cultivation and for young paddy.
	Nattore ...	0·30	
	Nowgong ...	0·74	
13	Rungpore „ 25, '89	1·46	Weather—overcast with frequent storms in the earlier part of the week, but steady sunshine at its close. The prospects of the rice and jute crops have greatly improved, but much of the *aus* or early rice was damaged beyond repair by the drought. It will certainly be a poor crop. Cultivators found it difficult to keep down the weeds.
	Gaibanda	2·74	
	Kurigram ...	3·94	
14	Bogra „ 25, '89	0·10	Weather—much cooler; variable sky and winds. Jute and *aus* rice are still being sown, but with poor prospects. Rain is very much wanted. In some places *amun* rice is being sown. Cattle disease is rather prevalent. Common rice is selling at 14½ seers a rupee.
	Sherpore ...	0·12	
15	Pubna „ 25, '89	0·16	Weather—unsettled. A few slight showers. Prospects of newly-sown *aus* jute, and sugarcane improved in the Serajgunge sub-division. *Aus* sowings in the Sudder sub-division considerably restricted by want of rain.
16	Darjeeling „ 25, '89	2·46	Weather—cloudy. Crops progressing favourably. In the Terai 12 annas of jute and 13 annas of *bhadoi* have been sown. The recent rain has done much good.
17	Julpigoree „ 25, '89	5·01	Weather—hot and cloudy. Sowing of *bhadoi* and jute over. The rain has done much good to the crops. Common rice sells at 17 seers per rupee.
	Eastern Districts.		
DACCA DIVN.			
18	Dacca May 25, '89	2·44	Weather—hot and mostly cloudy, with occasional rain. Sowing of jute and *aus* and *amun* paddy nearly completed. Prospects of standing crops promising. Crops in low lands have been damaged in parts of the district owing to the sudden rise of rivers. Good rain in Manikgunge has washed away the grubs that attacked the jute plants in places.
19	Furreedpur „ 25, '89	1·40	Weather—cloudy and cool. Sowing of paddy almost completed; but prospects of *aus* not favourable owing to want of rain. Crops in low lands will probably be damaged by the early rise of the Padma.
20	Backergunge „ 25, '89	1·64	Weather—hot. Ploughing for *aus dhan* progressing.
21	Mymensingh „ 25, '89	2·49	Weather—variable with storms. State and prospects of crops generally good, except in the Tangail sub-division.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*			
	Eastern Districts—concld.		
CHITTAGONG DIVN.			
22	Chittagong May 28, '89	0·50	Weather—seasonable. Prospects of *aus* fair. Prices rising.
23	Noakholly „ 25, '89	2·47	Weather—hot in day, cool at night. Sowing of *aus* nearly completed. The late rain has done some good to the standing crops. More rain wanted. Price of rice stationary.
24	Tipperah „ 25, '89	2·74	Rain fell on 5 days. Weather bright with rain-storms. Prospects fair. Sowing of *dhan* not yet completed, but nearly so. Jute doing well.
25	Chittagong Hill Tracts. „ 24, '89	1·84	Weather—excessively hot. Sowing in *jums* reta·d·d owing to short rainfall. Rain badly wanted. Plough cultivators beginning to despair of their *aus* paddy crop.
	Hill Tipperah „ 25, '89	2·43	Weather—occasionally stormy. Prospects of sugarcane and jute continue to be fair. *Aus* paddy still being sown.
BEHAR.			
PATNA DIVN.			
26	Patna May 25, '89	1·94	Weather—hot in the first part of the week. The rain has done some good to *cheena* and preparation of fields for *bhadoi*. Harvesting of *boro* rice continues. Prices of food-grains are almost stationary, with slight indication of rise in the prices of rice, wheat and gram in the Barh sub-division.
	Barh ...	0·46	
	Behar ...	1·58	
	Dinapur ...	0·62	
27	Gya „ 25, '89	Slight rain.	Weather—cloudy with west and east winds alternately. Heavy rain in parts of the district. Sugarcane coming on well. Prices of food-grains continue to rise.
28	Shahabad „ 25, '89	0·49	Weather—comparatively cool and cloudy for the last few days with showers. Some crops of *cheena* sown in succession to the crop recently cut are on the ground. The rain has benefited them and also the sugarcane. The mango crop is a failure. The *mohwa* crop is said to have been good.
	Sasseram ...	0·18	
29	Dbrbhunga „ ..	...	Report not received.
30	Mozufferpur „ 25, '89	0·30	Strong easterly winds. Rain more or less everywhere, but very unequal—heavier at Hajipur than elsewhere. The rain will help the cultivators to prepare lands for *bhadoi* sowings, but more rain is required to ensure their success.
	Hajipur ...	1·03	
	Sitamarhi ...	0·02	
31	Sarun „ 25, '89	0 17	Weather—hot; cloudy for the last few days. The rain has been beneficial to *cheena* and indigo.
32	Chumparun „ 25, '89	0·27	Weather—passing clouds; temperature variable. The rainfall in the Sudder sub-division was too small to do any appreciable good; in Bettiah it has been beneficial. More rain is urgently needed. Prices high, and the poorer classes all over the district are in disti ess.
	Bettiah ..	0·73	
BHAGULPORE DIVN.			
33	Monghyr „ 25, '89	0·74	Weather—cool and cloudy with easterly wind. A good shower with storm on 21st throughout the district, which has facilitated ploughing of lands for *bhadoi* crops and has improved the prospects generally. Prices stationery.
	Beguserai ...	1·68	
	Jamooe ..	1·82	
34	Bhagulpur „ 25, '89	1·53	Weather—mild since the rainfall on the 22nd instant. Ploughing for *bhadoi* sowings commenced. The late rainfall has improved prospects generally, but prices remain stationary. More rain urgently wanted in the north-eastern pergunnahs, where the situation remains anxious.
	Banka ...	1·05	
	Madhepurah .	1·65	
	Soopool .	1·04	
35	Purneah „ 25, '89	1·99	Slight fall of rain almost everywhere, not nearly enough. Weather grows cooler. Much more moisture required, not only to save the seed already put into the ground, but to enable agricultural operations to go on. Want of moisture is operating injuriously in respect of future crops.
	Kissengunge	3·18	
	Arrariah ...	0·99	
36	Maldah „ 25, '89	1·28	Weather—cool, cloudy and fine. Harvesting of *boro* continues with a fair out-turn. Rain has done much good to the standing crops, and has assisted the sowing of *bhadoi* and the preparation of lands for winter rice crops Moie rain still wanted. Price of rice has begun to fall.
37	Sonthal Perghs. „ 25, '89	3·03	Weather—cloudy and threatening. The rain will in most places enable the people to prepare their lands for the *bhadoi* sowings, and will benefit the sugaicane and indigo crops. Prices high.

ORISSA.			
ORISSA DIVN.			
38	Cuttack „ 25, '89	0·17	Weather—dry. Ploughing for *beali* and *sarad* rice continues. Sowing has commenced in some places. Price of rice stationary.
39	Pooree „ 24, '89	1·06	Weather—seasonable. The recent rain is favourable to the ploughing of lands for the ensuing *sarad* crop. Common rice varies from 21 seers to 14 seers 7 chittacks per rupee in the Sudder sub-division and from 15 seers to 13 seers 2 chittacks in the Khoorda sub-division. There have been sli,:ht showers in Khoorda.
40	Balasore „ 25, '89	1·34	Weather—seasonable. Abundant rainfall all over the district, most favourable for cultivation.
CHOTA NAGPORE.			
	South-West Frontier Agency.		
CHOTA NAGPORE DIVN.			
41	Hazaribagh May 25, '89	0·41	Weather—cool. Unsettled, cloudy on and off. Slight rain in several thannahs. Rain will do good to sugarcane. More rain required for ploughing. Prices show a tendency to rise.
42	Lohardugga „ 25, '89	0 29	Slight rain during the week. Sowing of *gora dhan* is going on. Outturn of *Bysakhi* lac is not good. Prices steady at head quarters, but rising in the Palamow sub-division.
43	Singbhoom „ 25, '89	0 72	Weather—stormy during the week; still cloudy. Ploughing and sowing operations have commenced. Sugarcane doing well. Prices lower in Dhalbhum.
44	Manbhoom „ 25, '89	0 54	Weather—cool with frequent storms. Good rain has fallen and facilitated early ploughings. More is required. Rice sells at from 14 to 21 seers per rupee

* Mean of 6 days. † Mean of 5 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 24th of May 1889.

Explanation.—...... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 28th May* 1889.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, DURING THE WEEK ENDING 24TH OF MAY 1889.

At the commencement of the week weather was everywhere fine, and pressure and temperature were high, but the rise of pressure, which had been going on during the latter half of the previous week, ceased and a rather rapid fall set in everywhere. It lasted the first two days, causing an almost general defect. Temperature continued high, especially in South Behar, humidity increased slightly, and showers were reported from Orissa and North Bengal. After that a general disturbance began, with irregular changes of pressure, sometimes large, and a fall of temperature in all districts except Behar and Chutia Nagpur, where a large excess existed a day or two longer than in the other districts. On Monday, the 20th, humidity was high everywhere, and rain was general in Assam, and showers fell in many parts of East, North, and South-West Bengal. Behar and Chutia Nagpur alone received no rain. Wind directions became more easterly, and continued so for several days, being generally north-easterly in North Bengal, and easterly or south-easterly elsewhere. On Tuesday pressure changes were very irregular, a rapid fall of temperature occurred in Behar, and weather became more generally disturbed, and rain fell at almost all stations, though only in a few instances did it amount to more than an inch. During the following three days similar conditions obtained, though weather was becoming less disturbed towards the end of the week, when wind directions became more normal, cloud proportion lessened, and showers were less numerous. Rapid increases and decreases of pressure, however, continued, and temperature from being largely in defect, especially in Behar, began to rise at the end of the week.

Pressure.—Pressure changes have been large throughout the week, and during the day or two when conditions were most disturbed, considerable irregularity existed. At the beginning there was an excess averaging for the whole province about a tenth of an inch, but in consequence of the rapid fall of the first two days, the only stations that reported excess pressure were a few in East and North Bengal and Assam. The variations from the normal then showed great irregularity. A rise was general on Monday, the Orissa stations only reporting slight falls. On the following day the changes were not large, but were decidedly irregular, and the difference of pressure over the province considerably increased. The rise that occurred on Wednesday in the western districts was the largest change of the week, amounting to ·15 inch in Chutia Nagpur, Behar, and parts of South-West Bengal. Pressure became again everywhere in excess, but in consequence of the large fall on the following day, a defect arose in East and North Bengal and Assam. The largest fall was ·13 inch in North Bengal. The changes on Friday were unimportant and somewhat irregular. The average pressure for the week does not differ much from the normal, being about ·02 inch in excess, and at a fair number of stations pressure is almost normal. The largest difference is in North Bengal and Assam.

Temperature.—During the first two days of the week temperature was above the normal everywhere except Assam, the excess in Behar being about 7°. When storms became general, large falls of temperature set in, and excepting Behar and Chutia Nagpur, defect existed everywhere on Monday. On Tuesday there was a rapid fall in Behar, which extended to Chutia Nagpur the next day. A large defect then existed in Behar, and kept increasing till the end of the week, when it amounted to about 12°. The defect for the other districts during the latter half of the week was three or four degrees. Temperature first fell in Assam, and on Monday was about 8° in defect; after that a rise set in, and by the end of the week there was a slight excess at Sibsagar and Silchar. The mean for the week is in defect in all districts except Chutia Nagpur. The defect is largest in Assam, amounting to nearly 3°. In Orissa, South-West and North Bengal, and South Behar it is over 1°. In East Bengal, North Behar, and Chutia Nagpur average temperature is very nearly normal. In the early part of the week maximum temperatures of over 110° were reported by several stations. The highest for the week was 113° in South Behar, and the lowest 64·8° in Assam and 65·4° in North Bengal. In Assam the mean temperature has been nearly three degrees below the normal.

Rainfall.—Showers have been fairly common every day of the week, and were general everywhere on Tuesday and Wednesday. Rain fell on Saturday only in Orissa and Assam, then extended to East and North Bengal. No rain fell in Behar till Wednesday, when there were heavy showers in North Behar; but parts of South Behar did not receive more than two or three hundredths of an inch. The heaviest rain fell in South Behar on Thursday, Patna reporting 1·7 inches. More than the normal amount has fallen in all districts except North Bengal, but there the defect is very slight. North, East, and South West Bengal received an average of more than an inch and a half, South Behar a little over one inch Orissa ·85 inch, and Chutia Nagpur ·53 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 24th May 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1889.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, to thunder, p passing temporary showers, K thunderstorm, ↗ strong wind, < lightning.

A. PEDLER,

For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

Calcutta, the 27th May 1889.

MEMORANDUM.

During the week ending 11th May 1889, births and deaths were registered in the principal Municipalities in Bengal at the rates respectively of 18·9 and 21·6 per 1,000 of population, against 18·2 and 20·1 per 1,000 during the preceding week ending 4th May, indicating an improvement in the registration of deaths.

2. The following Municipalities returned the highest proportions of births and deaths:—

Births.

	Ratio per *mille.*
Rampore Beauleah	44·7
Darjiling	39·1
Durbhanga	36·2
Monghyr	32·5
Mozufferpore	31·6
Comillah	30·8

Deaths.

	Ratio per *mille.*
Comillah	46·2
Gya	44·4
Ranaghat	41·9
Naraingunj	41·4
Serampore	41·2
Rampore Beauleah	39·4
Utterpara	37·7
Kishnaghur	36·0
Durbhanga	31·5
Puri	31·5
Purneah	31·2

3. In comparison with the results of the preceding week, there was an increase in the death-rate from cholera, no variation in fatality from small-pox, and only small differences in the casualty-rates from the other diseases:—

	Ratio per *mille* during the weeks ending— 11th May 1889.	4th May 1889.
Cholera	4·2	3·1
Small-pox	·6	·6
Fever	8·8	8·0
Bowel-complaints	1·8	2·2
Injury	·4	·5
Other causes	5·8	5·7

4. The diseases indicated in the foregoing table proved most fatal to life in the following Municipalities, excepting bowel-complaints and injury, the mortality from which was nowhere above normal:—

Cholera.

	Ratio per *mille.*
Ranaghat ...	17·9
Naraingunj ...	16·6
Serampore ...	15·7
Comillah ..	15·4
Kishnaghur	15·1
Purneah ...	10·4
Chittagong ...	9·4
Rampore Beauleah	7·9
Gya ...	7·6
Durbhanga ...	6·3
Howrah ...	5·7
Patna ...	3·2

Small-pox.

	Ratio per *mille.*
Chupra ..	2·9
Patna ..	2·3

Fever.

	Ratio per *mille.*
Rampore Beauleah	26·3
Gya ...	22·5

Other causes.

	Ratio per *mille.*
Naraingunj ...	20·7
Comillah ...	19·3
Serampore ...	16·7
Gya ...	13·7
Bhagulpore ...	13·6
Puri ...	10·5

5. Under the heads of *Sex*, *Class* and *Age*, the mortality of the week was as follows:—

According to Sex.

	Ratio per *mille.*
Males	21·9
Females	21·3
Ratio of male deaths to every 100 female deaths	110

According to Class.

	Ratio per *mille.*
Christians	39·4
Hindus	21·1
Mahomedans ...	22·7

According to Age.

	Ratio per *mille.*
Under 1 year ...	196·3
1 and under 5 years ...	32·8
5 „ 10 „ ...	10·3
10 „ 15 „ ...	6·4
15 „ 20 „ ...	16·0
20 „ 30 „ ...	11·2
30 „ 40 „ ...	15·0
40 „ 50 „ ...	16·0
50 „ 60 „ ...	20·6
60 years and upwards ...	50·2

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 27th May 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

DISTRESS IN THE PATNA DIVISION.

REVENUE DEPARTMENT.

Darjeeling, the 29th May, 1889.

RESOLUTION.

READ—

A report from the Commissioner of Patna, No. 260G—F, dated 22nd May, 1889, on the condition of the people and prospects of the crops in his division during the fortnight ending 22nd May, 1889.

Ordinary agricultural operations were checked during the fortnight by intense heat and drought; the subsidiary crop of *cheena* crop, which was up to the average in Shahabad, failed in Mozufferpore and Chumparun; the want of water was much felt in the latter district, and prices were slightly enhanced beyond the high rate to which they had previously risen. The conditions were, therefore, as unfavourable as could have been anticipated. But the attendance at the relief works, which is now a little less than thirty-two thousand, has not very greatly increased: in Durbhunga, for instance, it rose from 10,241 to 11,868. There has been nothing like the rush of large bodies for work which characterises the crisis of a famine. Telegraphic advice has since been received as to the effect that the opportune rain which fell, though not in large quantities after the close of the fortnight, has benefited crops on the ground, made the preparation of land easier, and slightly improved the general prospect. It is hoped that in the districts south of the Ganges at least the change in the weather will have caused a very marked improvement in prospects.

The Lieutenant-Governor notices with approval the increase in the rate paid on the Mozufferpore relief works, so as to adjust wages to rising prices, on the principle laid down in the Famine Code; as also the caution given by the Commissioner not to raise rates so as to tempt away labourers from necessary field work when rain falls. A sum of Rs 20,000 has been granted since the close of the fortnight for roads in this district outside the area previously classified as distressed. With reference to the remark that only four roads of those at present dealt with will afford work after 15th June, the Commissioner's attention is directed to the Chief Engineer's estimate made at the commencement of relief operations, which provided road work for 12,752 people at the rate now accepted of 80 cubic feet per man. If this programme be carried out, there will be work in Mozufferpore for numbers much greater than have been employed hitherto.

In Chumparun only have any signs of depletion been observed in the local markets, and even as to that district it is stated that the supplies are still sufficient.

The report states that it has been decided that on completion of the repairs now in hand, no farther relief will be afforded on road works in Durbhunga, future operations being confined to tanks. On this subject the Commissioner will be requested to report separately, as the grounds for the decision arrived at are not understood. It was found convenient, when Sir Steuart Bayley visited the district, to carry on road and tank work simultaneously, and as the rains approach, the objection to relying solely on tank-digging must apparently increase.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

No. 2606—F, dated Bankipore, the 22nd May 1889.

From—JOHN BOXWELL, Esq., Offg. Commissioner of the Patna Division,
To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to submit my report on the condition of the people and prospects of the crops for the fortnight ending the 15th instant.

PATNA.

2. The weather throughout the fortnight has been very hot and sultry. The threshing and winnowing operations have almost been completed. *Boro* rice in the Barh sub-division is being reaped with a luxuriant outturn. The dearness of provision still continues, but the condition of the people is good up to date. Labourers are getting employment both in the fields and in building and thatching houses and huts, &c.

Dry fodder is plentiful, but the sun being so powerful, there is some difficulty in procuring green fodder.

The following table shows the prices ruling during the fortnight as compared with those of the preceding fortnight:—

	SUDDER.		BARH.		DINAPORE.		BEHAR.	
	Past.	Present.	Past.	Present.	Past.	Present.	Past.	Present.
	Srs. chs.	Srs. chs.	Srs. chs.	Srs. chs.	Srs. chs.	Srs. chs.	Srs. chs.	Srs. chs.
Coarse rice	13 8	13 8	13 4	12 4	11 8	11 8	14 4	13 0
Indian corn	19 0	..	16 8	16 0	17 8	17 0	17 12	17 0
Wheat	15 0	15 8	14 8	13 8	13 8	14 0	15 12	14 4
Barley	20 8	22 0	19 8	18 0	21 0	20 0	23 8	21 8
Gram	20 0	22 8	20 0	18 0	21 0	20 8	19 4	16 8

In Behar the prices are still rising.

SARUN.

3. There are no important food-crops on the ground at present deserving notice. Rain is wanted for *cheena* and indigo.

The prices of chief food-grains current during the last and present fortnight are compared below—

	Present fortnight.		Preceding fortnight.	
	SRS.	CHS.	SRS.	CHS.
Wheat	13	8	14	8
Common rice	12	2	12	14
Marua	20	0	20	0
Gram	19	4	20	8
Indian corn	18	8	19	8
Arhar	17	8	21	0

The Magistrate says that the rise in the prices is chiefly due to combination of the local Bunias and partly to exportation.

The local stocks are yet full.

SHAHABAD.

4. The harvesting of *cheena* has been completed, and an average crop obtained. Sugarcane is now the only crop standing on the ground. It is doing well so far.

There is nothing new to report in regard to the condition of the people. The prices are rising on account of increased demand for export. Common rice is selling at 13¼ seers per rupee, and wheat 14 seers 14 chittacks.

GYA.

5. *Area affected.*—Same as reported in last fortnightly report.

6. *General state of affected tract during last fortnight.*—The circumstances of the people are now getting more tight than before. There are now no crops in the fields except *cheena* and sugarcane. No rain fell during the fortnight. Public health continues good.

The supply of grain in the market is reported to be sufficient. Common rice is selling at 13 seers at Gya, and 13½ seers at Aurungabad, and 12 seers at Nowada.

7. *Public Works open:*—A test work has been opened at Kharout-Seidilla road in Nowada sub-division, but no report about the attendance of the labourers on the work has been yet received.

Excavation of tanks is going on in the Government estate Sarawan in pergunnah Sherghotty.

About 500 coolies are employed on Gilandazi work in the Tikari estate.

Earthwork under tuccavi loans is affording employment to about 300 persons.

The average number of persons employed during the fortnight under the system of payment by result and task work was 74 and 600 respectively.

The number of men paid under section 31 of the Famine Code was three.

8. *Gratuitous relief.*—No expenditure under this head was incurred. Besides the men who are daily fed by the Mohunt of Bodh Gya and other such places, several hundreds are now-a-days employed as well as gratuitously fed at Husua in connection with the marriage festivities of Baboo Dirgopal Lal's daughter.

9. *Advances.*—Fresh sanction for making advances under the Land Improvement Act has been recently received. The applicants who have furnished sufficient securities have been informed that advances will be made to them on their appearing before the Collector. A great many cases are under enquiry.

MOZUFFERPORE.

10. *Area affected.*—The area affected remains the same. The Sub-divisional Officer says that pressure is beginning to be felt much more generally over the sub-division, and will require to be watched very carefully.

11. *General state of the affected tracts.*—No rain has fallen during the fortnight, and prospects will not improve till it falls. The number of persons on relief works has increased considerably, and will probably continue to increase. The country is bare of crops, the *cheena* crop having been a total failure. Here and there some labour is still being done in the fields to prepare them for rice and *bhadoi* sowings, but the amount of labour done is very small.

The Sub-divisional Officer reports that a considerable number of people whom he has seen working on the tanks at Parihar and Surund and on the roads in the neighbourhood certainly did appear to have become reduced by insufficiency of food. The condition of those receiving charitable relief is most miserable.

The public health still continues good. Some few cases of small-pox have been reported, but no cholera.

Prices are steadily rising, but it is noted that the statements show rice at Bela, which is the part where distress appeared to Mr. Bolton to be greatest, was selling at the end of this fortnight at 12 seers 8 chittacks, whereas in the statement for the previous fortnight the price at Bela was given as 10 seers 12 chittacks. The most considerable rise has been at Pupri and Majorgunge, from 12 seers 2 chittacks and 12 seers 9 chittacks last fortnight to 9 seers 8 chittacks and 11 seers 6 chittacks in this fortnight.

12. *Grain stock.*—Supply of grain in the market is reported to be sufficient. The Collector states that the distress is not owing to insufficiency of food-supply so much as it is from the high prices of food and insufficiency of works in the fields.

13 *Public Works open.*—Work is going on on 12 roads or sections of roads. Only four of these roads will afford work after the 15th June, and the Collector says it will be necessary to commence new roads. The rates on the roads were raised on the 13th May to 2¼ annas per 100 cubic feet, and the Sub-divisional Officer considers that it will be necessary soon to raise them to 2½ annas per 100 cubic feet. If prices of food continue to rise, the increase in the rate will be necessary, but the Sub-divisional Officer will be instructed to be careful not to raise the rates so as to make it more profitable for labourers to rush on our works than it would be for them to work in fields when rain falls. The average daily number of persons employed on the roads was 5,152.

Nine tanks are being dug or deepened. The average daily number of persons employed was 3,258. Five of these works were commenced during the fortnight. As the work will not last long, it will be necessary to provide other works.

The daily average number of men, women and children employed on Durbhunga Raj works during the past fortnight was 537.

CHUMPARUN.

14. *Area affected.*—There has been no change in the area affected.

15. *General state of the affected tract.*—No food-crop is at present standing on the ground. Rice and *mung* have been sown in a few places, and rain is anxiously looked for in every part of the district. The Collector says that want of water is very much felt—in fact a water famine is anticipated, all the rivers having been dammed in Nepal. The *cheena* crop is a failure, and the small outturn of the late *rubbee* harvest has nearly been consumed. The poorer classes depend entirely upon loans and labour. The number of labourers on the relief works has increased from 8,865 in the previous fortnight to 10,196 during that under review. The Collector recently visited a large number of villages supposed to be the worst off, and he says that pressure is certainly increasing, and no mitigation is expected until rain falls to admit of general sowings. A few cases of fever were reported from Dhaka Circle. Public health is otherwise good.

16. *Public Works.*—The number of persons employed on the several classes of works was as follows :—

District Board Works.		
Daily wages	6	
Piece-work	182	
Task work	438	
		626
Civil Agency Works.		
Daily wages	56	
Piece-work	5,486	
Task work for able-bodied persons	2,343	
Ditto for infirm	1,685	
		9,570
Total ...		10,196

The number of persons employed on works carried on through tuccavi loans was 1,050.

The markets in the affected tracts are still sufficiently supplied, but signs of depletion are appearing. Prices continue to rise, as will be seen from the following comparison :—

	Common rice.	Paddy.	Indian corn.	Gram.	Rahar.	Khesari.	Barley
Previous fortnight, 30th April	11¼ to 12½	18½	17½ to 18½	18—4	20¾	20½	20½
Last fortnight, 15th May	10—15 to 11	16½	15—14 to 16½	16—7	16—7	18½	16—7

It is reported that stocks are still being hoarded by a few wealthy persons in the hope of higher prices.

17. *Gratuitous relief.*—The number of persons who received gratuitous relief during the past fortnight was as follows.—

Men	...	30
Women	...	28
Children	...	6
Total	...	64

The total expenditure under this head during the fortnight was Rs. 80-4.

DURBHUNGA.

18. *Area affected.*—No change.

19. *General state of affected tracts.*—The Collector reports that the present state of the people is not such as to cause any alarm of immediate starvation. Prices of the different food-grains eaten by the people have, however, risen. The continued drought has greatly reduced the outturn of the *cheena*, and has almost annihilated *mung.*

There has been no rain anywhere except a few drops, of no use, but rather damaging to the *mung*, in the neighbourhood of Lowkaha and Lowkahi. In the Nepal Terai there is reported to have been a heavy storm with hail.

Failure of rain at present gives no cause for alarm. Land is comparatively empty, and there are few crops to be damaged by drought. Hopes and fears about the weather are now connected with the coming year.

Indigo is suffering, but apparently more from what is called *rot* below the ground than from the scorching. The fact is insects have been at work at the roots, and done much mischief. This is a consequence of drought.

Public health remains good. Cholera appeared in one village in Madhubani sub-division. The disease was imported by a traveller from Nepal. Twenty-six deaths occurred out of 46 cases, but the infection was confined to this village.

20. *Public Works open.*—The returns show that 11,668 persons received employment during the last fortnight against 10,241 of the previous fortnight, as shown below—

		Last fortnight.	Previous fortnight
Men	...	10,000	9,090
Women	...	866	571
Children	...	802	580
Total	...	11,668	10,241

The Collector writes—

"The increase in the number of women and children is the remarkable feature of this report, and one I do not like to see, though fortunately it cannot now be long before the main agricultural operation of the year will come into full activity."

The pressure is still visible chiefly in Circles A and B. The roads under repair in the north-eastern parts of the sub-division of Madhubani continue to afford sufficient employment to labourers in Circles C and D. The Sub-divisional Officer, during his late visit to Madhwapore, has seen no beggars on the roads.

It has been decided that no further relief will be afforded on road works, future operations being solely confined to tanks on completion of the repairs now in hand. The Sub-divisional Officer has selected sites for seven of these

works, which will be opened in strict conformity with the principles of the Famine Code. It is the intention of the District Engineer to open these tanks at a uniform width of 200 feet. The area will depend on the demand for labour in the neighbourhood, any rush of labourers being met by an extension of length.

The stoppage of road work necessitates the opening of tanks at numerous centres, as it is not desirable that labourers should travel long distances to and from work. The arrangements which have been made to open tanks throughout Circles A and B will, it is believed, meet all possible demands.

Stocks throughout are reported to be ample, but holders are not selling in hopes of further rise.

The Collector says that crime has been palpably affected by the scarcity. The figures of the Phulparas, Khojowli, and Beniputti thanas, giving a comparison of the thefts and burglaries reported from January to date in the three years 1887, 1888, and 1889, leave it impossible to doubt that crime and high prices have been closely connected. The figures of Madhopore, which lies to the south of the affected area, and where prices have been comparatively low, indicate no local increase of crime—the strongest possible corroboration of the connection between crime and high prices.

21. *Gratuitous relief.*—No expenditure under this head was incurred during the past fortnight.

22. The important points I have to bring to notice in this report are—

(1) There has been no rain in any part of the affected districts during the fortnight.

(2) Prices have risen more or less in every district.

(3) There is a visible increase of crime in Durbhunga, which is apparently due to scarcity.

(4) Road work will soon be stopped in Durbhunga, future relief operations being confined to tank work.

(5) Pressure is being felt far beyond the limits of the affected tracts. This information comes in from many trustworthy sources. In Mozufferpore it will be necessary to provide work, not only outside the affected tract, but outside the Seetamarhi sub-division. I am now making arrangements for this.

(6) Importation of grain from North Bhagulpore to Madhubani, which had been checked by a cholera scare, has begun again.

(7) The total number of people employed on relief works of every kind, public and private, of the three northern districts, is 31,925, and is increasing.

23. I submit a statement showing the allotments made and the expenditure incurred on account of relief operations up to 30th ultimo.

Statement showing allotments made and expenditure incurred in connection with scarcity and relief operations in the districts of the Patna Division up to 30th April 1889.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE JAIL DEPARTMENT FOR THE YEAR 1888.

JAILS.

Dated Darjeeling, the 1st June 1889.

READ—

The Report on the Administration of the Jail Department for the year 1888.

Read also—

The Reports for the years 1886 and 1887, and the orders of Government recorded thereon.

DR. LETHBRIDGE was in charge from the 1st to the 14th April, when he went on a month's privilege leave. Mr. A. D Larymore, Superintendent of the Alipore Jail, acted as Inspector-General of Jails in addition to his own duties till the 14th May, when Dr. Lethbridge resumed charge, and held it till the 1st November. He then went on special duty; and Dr. Purves, by whom the present report has been submitted, officiated as Inspector-General of Jails in his place up to the end of the year.

2. *Judicial statistics.*—The total jail population rose from the extraordinarily small number of 13,210, due to the Jubilee remissions on the 31st December 1887, to 13,985 on the 31st December 1888. The number of convicts increased from 11,950 to 12,821, and that of under-trial prisoners from 1,002 to 1,116, while the number of civil prisoners owing to recent changes in the law fell from 258 to 48. The following table shows the figure for convicts only during the last ten years:—

	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888
Number of prisoners in jails and subsidiary jails on the last day of previous year	17,936	17,200	16,284	15,231	14,377	13,417	14,051	13,821	13,465	11,950
Admitted direct during the year ..	35,726	33,335	31,465	31,710	29,763	32,034	31,530	30,675	29,942	30,995
Total ..	53,662	50,535	47,749	46,941	44,140	45,451	45,581	44,496	43,407	42,9[illegible]
Admitted by transfer ...	20,500	18,811	17,004	15,760	15,499	16,660	17,265	17,372	16,427	20,185
Total	74,162	69,346	64,843	62,701	59,639	62,111	62,846	61,868	59,834	63,130
Total discharged including transfers ..	56,962	53,062	49,612	48,324	46,222	48,060	49,025	48,40[illegible]	47,884	50,309
Balance at the end of the year ..	17,200	16,284	15,231	14,377	13,417	14,051	13,821	13,465	11,950	12,821
Daily average number of prisoners .	17,258	16,678	15,506	14,801	13,711	13,697	13,757	13,504	10,908	12,378

When the proposals, carried out in 1888, were made to reduce 14 District Jails to the status of Intermediate Jails, it was expected that provision would only have to be made for the accommodation of 11,000 prisoners, and as this number is now greatly exceeded, and there does not seem to be any prospect of an immediate decrease, the Inspector-General will be requested to report whether it is necessary, in order to avoid the risk of overcrowding, to restore any of the Intermediate Jails to their former status. Direct admissions increased from 29,942 in 1887 to 30,995—no doubt in great measure owing to the high prices of food-grains in the greater part of Bengal. The increase is not, however, very serious, as the average annual admissions from 1883 to 1887 amounted to 30,788. The average annual admissions from 1878 to 1882 were 34,233, while in 1878, the last year of great scarcity in Bengal, they numbered 38,929. The frequent transfer of prisoners from Intermediate to District and Central Jails accounts for the large increase under the head of admissions by transfer. The small number of releases under remission rules is due to the fact that many prisoners were released on account of the Jubilee in 1887, whose term of imprisonment would otherwise have expired in 1888. The slight decrease in the percentage of convicts confined in the Central Jails, 57·40 against 59·55 in 1887, is probably due to the same cause, as many long-term prisoners were released in 1887 who would otherwise have swelled the convict population of the Central Jails. The figures, however, show that these are fully utilized, and that a large proportion of the jail population is confined in the jails where the standard of discipline is highest and the labour exacted most suitable. The number released on appeal has increased from 1,903 in 1887 to 1,980 in 1888, and it is a very unsatisfactory feature of the criminal administration that the

number has increased, year by year, since 1882, when the figure stood at 1,384.

3. That only 97 Bengal prisoners were transported as against 137 in 1886 and 168 in 1887 is due to the fact that the figures of those years were swollen, a number of prisoners, who had formerly been rejected for bodily infirmities, being sent to the Andamans under the new rules regulating the selection of convicts. The number sent in 1884 and 1885, respectively, with the more stringent rules then in force, were 37 and 35.

4. A further addition of 145 Burmese prisoners has raised the total number of this class under confinement in Bengal to 422. The Burmese are a dangerous class of prisoners owing to their quick temper and constant desire to escape, but their general behaviour is very good. During 1888 only 434 offences were recorded against 422 prisoners, while in 1887, with only 284 prisoners, 450 offences were recorded. They have, save in a few jails, kept excellent health on the ordinary diet allowed to native prisoners. Most of them are now trained artizans who do valuable work. They can generally speak the language of the district in which they are confined, and a considerable proportion are serving as convict officers in different grades. The responsibilities of jail officers have been considerably increased by having these prisoners in jails which were not intended for the accommodation of transportation prisoners, and the Lieutenant-Governor is still of opinion that something should be done towards introducing a scheme of ticket-of-leave for Burmese prisoners who have served for a certain time in the higher grades as prison officials.

5. As regards the nature of imprisonment, the only noticeable points are that, notwithstanding the increase in admissions, the number of prisoners sentenced to simple imprisonment has decreased from 2,216 to 2,143, and that of prisoners sentenced to rigorous imprisonment with flogging from 103 to 72. The number of females admitted has decreased year by year from 1,595 in 1884 to 1,218 in 1888. The number of re-convicted prisoners admitted into jail rose from 3,472 in 1887 to 3,612 in 1888; but it is not possible to draw comparisons of any value with previous years until the new rules introduced in February 1887, regarding the identification and classification of habitual offenders, have been working some time longer. The number of persons imprisoned for failing to give security for good behaviour rose to 1,070. The number of convicts sentenced to corporal punishment continues to decrease yearly, and fell in 1888 to 1,234 from 1,373 in 1887; on the other hand the number of boys under 16 sentenced to be flogged increased in the same period from 377 to 394.

6. The number of under-trial prisoners admitted during the year rose from 26,240 in 1887 to 28,454, while the average period of detention fell from 17·75 to 16·14 days. The Inspector-General has in his report shown that, taking the Sessions hajat separately, the average period of detention was 44·39 days; he is requested in future reports to show separately the average detention of other prisoners also. It is impossible to calculate it from the figures given in the report, as it is not stated how many hajat prisoners were committed to Sessions.

7. *Jail buildings.*—In the Presidency Jail Rs. 47,804 were spent on the construction of an iron shed, pipes for filtered water, &c. At Dacca Rs. 19,221 were spent on double-storied barracks and the Superintendent's house. In the Bhaugulpore Central Jail Rs. 14,226 were expended on new barracks, and at Buxar a new workshed cost Rs. 14,929. Rs. 47,369 were expended on the building of eight new subsidiary jails and the erection of a pucca enclosure wall to the Kurseong subsidiary jail. The daily average number of prisoners employed on jail buildings was 1,334 against 1,124 in 1887. During the last 12 years Rs. 2,46,235 have, on an average, been provided yearly for building new jails and improving old buildings, and it now only remains to build a few more subsidiary jails to complete the substitution of permanent buildings for the thatched sheds which formerly served in many cases as jails. Some of the buildings on the old standard plan are still unsatisfactory from a sanitary point of view, and the Lieutenant-Governor will take measures in communication with the Inspector-General to effect gradual improvements in the sleeping wards in such cases.

8. *Guards and escapes.*—The high state of efficiency of the warder guard has been maintained, and it is satisfactory that it has been possible to do this with a much smaller number of punishments than was formerly required. The number

of punishments has fallen from 3,133 in 1885, 2,715 in 1886, and 2,359 in 1887, to 1,815 in 1888. Excluding warnings and extra drill, there were only 1,121 punishments among 1,584 men, the number to which the establishment has been reduced from 1,707 in 1887, owing to the reduction of 14 District Jails to the Intermediate class. The number dismissed has fallen from 216 in 1885 to 81 in 1888. Such results were anticipated by Dr. Lethbridge in his report for 1886 as likely to follow when those most frequently reported and punished should have been weeded out.

9. The escapes of convicts from jails and subsidiary jails numbered 21, against 13 in 1887 and 17 in 1886. The most serious of these cases was the escape of a gang of eight convicts from the Darjeeling Jail. These men (three Bhooteahs and five Pahariahs) were at work in the bakery at night, and having first murdered the convict warder in charge of the gang and responsible for its safe custody had no difficulty in making their escape not only from the jail but also from British teritory. Sir Steuart Bayley was satisfied after a full enquiry that there were serious defects in the management of this jail for which the Superintendent was to some extent to blame, as he was not in the habit of visiting the jail at night and examining into the system of guarding in force. A specially selected officer was deputed to take charge of the jail in place of the former Superintendent whose resignation was accepted, but little success has attended the efforts made to recapture the escaped convicts, two of whom only have been brought back. It has hitherto been the practice to confine hillmen, irrespective of the length of their sentences, in the Darjeeling Jail, as they do not keep good health in the plains. In view, however, of the proximity of the Independent States of Nepal, Bhutan and Sikkim, it is not safe to retain hillmen with sentences exceeding one year in the Darjeeling Jail, and orders were issued for their transfer to the Presidency Jail. It is now reported that they do not keep good health in Calcutta, and they will be transferred to one of the Behar Central Jails in the hope that the climate of Behar will suit them better. There were seven other escapes from District or Central Jails, and in every case the jail official responsible was judicially punished. It is satisfactory to note that none of the Burmese prisoners escaped.

10. *Prison discipline.*—As the question of recording jail offences is now awaiting the decision of the Government of India, it is unnecessary to deal with the subject in this Resolution. There is a decrease in the number of offences from 35,824 in 1887 to 29,054 in 1888. Corporal punishment was only inflicted in 245 cases as compared with 266 in 1887. Punishments by Criminal Courts also fell from 44 in 1887 to 29 in 1888. The only form of punishment showing an increase is solitary confinement with reduced diet: the numbers are 251 in 1887 and 352 in 1888. This form of punishment has been found effective in the case of persistent idlers and contumacious prisoners who are not strong enough to be whipped, and is resorted to on Sundays when no work is exacted. Fetters were imposed as a punishment in 8,759 cases against 11,640 in 1887, and in only 64 cases was it resorted to for safe custody.

11. The percentage of punishments to the total average number of convicts employed as convict officers was 200·7 as against 294·2 in 1887. There has been a considerable increase in the number shown as employed, as the convict warders employed to take the place of the paid staff are now included in Statement VIII, and it may be necessary for the Inspector-General of Jails to revise the sanctioned scale of 4 per cent. of the jail population, which has hitherto been considered sufficient. The percentage actually employed was 5·93 in 1888 compared with 4·34 in 1887.

12. The new mark rules have continued to work well, and it is satisfactory that there has been an increase in the number of remissions gained by prisoners undergoing terms of imprisonment not exceeding five years from 304 in 1886 and 293 in 1887 to 334 in 1888.

13. *Expenditure.*—The gross expenditure for all classes of jails, excluding that accounted for in the Public Works Department, rose from Rs. 9,68,033 in 1887 to Rs. 10,68,161 in 1888. The cost per prisoner, however, owing to the larger average population, fell from Rs. 79-0-4 per head to Rs. 77-12-8. There is a large increase in the charges under the

heads Dieting of prisoners, Hospital charges, Clothing and Miscellaneous contingencies. The only head under which there is a material decrease is Establishment. The expenditure for central, district, and intermediate jails only has risen from Rs. 8,12,576 to Rs. 9,08,410, the increase being spread over every item, excepting establishment and petty construction and repairs.

14. Diet charges have risen from Rs. 2,44,730 in 1887 to Rs. 2,95,680 in 1888, partly owing to the larger daily average prison population, and partly owing to the higher prices paid for the chief articles of diet, which has led to an increase in the diet expenditure per prisoner in central, district, and intermediate jails from Rs. 20-4 to Rs. 21-10-10. By far the most important article of diet is rice, and its price rose from Rs. 1-12-8 per maund to Rs. 1-14-10. Maize, dâl and salt also rose in price; while wheat, meat and fish fell. Vegetables and other products worth Rs. 36,284 were obtained from the jail gardens by prison labour. In the Rajshahye, Burdwan, and Khoolna Jails vegetables worth Rs. 52 had to be purchased in the market, owing, it is said, to the insufficient rainfall. It would be desirable in future to give in detail the earnings of each jail under this head, as doubtless greater efforts would be made to economise if each jail got credit for its own earnings. It is to be hoped that Dr. Lethbridge's suggestion, that in future the jailors will be held responsible if condiments have to be purchased from outside, will lead to further economy by obliging all jailors to grow the condiments required in their jail gardens. Steps are being taken to organise a proper system of fish-breeding in jail tanks, which should lead to a considerable saving in the cost of diet. The value of fish supplied for jail consumption should in future be shown under this head among jail products. Making every allowance for the high price of cereals and extra diet given to prisoners in a bad state of health in the Gya Jail, the expenditure there seems excessive as compared with other jails in the same division. In considering the average cost of diet per prisoner, it must be remembered that in Bengal every prisoner sentenced to rigorous imprisonment receives full labouring diet, that no scales of short diets are in use, and that under-trial prisoners now receive full labouring diet.

15. The increase in the average cost of hospital charges, from Rs. 68-3-11 in 1887 to Rs. 76-6 in 1888, is the result of a more liberal scale of diet. The cost of clothing prisoners has risen from Rs. 44,067 in 1887 to Rs. 58,309 in 1888. While this is partly due to the increased number of prisoners, it is not explained why the average cost per head should have risen from Rs. 3-10 to Rs. 4-4. In Bengal the clothing manufactured by jail labour is charged at the market value, and the difference between this and the actual cost of the raw materials is credited to Government in the Manufacturing Department.

16. Contingencies have increased from Rs. 81,190 to Rs. 1,09,213. Of the increase, Rs. 3,871 is due to the increase in transfers, Rs. 11,537 to the payment of municipal taxes for jail buildings, and Rs. 2,105 to the travelling expenses of jail officials, including, for the first time, those of Civil Hospital Assistants sent to do duty in jails. As regards the first item, the success of the organization of jail establishments in Bengal is greatly due to the fact that jailors and their subordinates are not allowed to remain more than three or four years in one jail—a measure which has materially contributed to the efficiency and trustworthiness of the jail service. The transfer charges have been increased by the reduction of 14 district to intermediate jails; the rules requiring the retransfer before release of all prisoners on the police register to the districts in which their homes are situated also accounts for much of this expenditure, and this portion of it which is attended with the best results in the police administration cannot be controlled by the jail administration. So, too, a change of system in paying the municipal tax on jail buildings has saddled the jail expenditure with a charge of Rs. 15,734. Were municipal revenues in Bengal raised as in other provinces by an octroi, from which the Lieutenant-Governor understands articles consumed in jails are exempted, this charge would disappear. This shows the difficulty of comparing jail expenditure in different provinces without some definite rules as to the charges to be entered in statements X and XI of the report. Contingencies include Rs. 8,443 for dieting of defendants paid through Magistrates. This is charged to the Jail budget for convenience of account keeping.

17. *Employment of prisoners, and manufactures.*—The average number of prisoners sentenced to labour increased from 10,698·30 in 1887 to 12,210·17 in 1888; of whom 5,368·39 were employed on manufactures, or 43 96 per cent., against 46·03 in the previous year, while 13 9 per cent. were sick or convalescent against 12·4 in 1887. The other prisoners were employed on prison duties as prison officers, on jail buildings in jail gardens, &c. The net cash earnings decreased from Rs. 2,99,870, or Rs. 60-14 per head on the average number of convicts employed on manufactures, to Rs. 2,66,898, or Rs. 49-12 per head. The net profits increased from Rs. 2,42,741 in 1887 to Rs. 2,69,564; the difference in the result between net profits and net cash earnings is due to the fact that there was a much larger stock of raw materials and manufactured articles in hand on the 1st January 1887 than on the 1st January 1888, and the average profit per head sentenced to labour is nearly the same as in the previous year, namely, Rs. 22-1 as against Rs. 22-11.

18. The average earning of each prisoner in Central Jails is shown in the following table:—

	Average earning per prisoner, 1888.	Average earning per prisoner, 1887.
Presidency Jail	73·0	58·3
Alipore "	43 7	42·7
Buxar "	21·3	40 2
Midnapore "	15·1	30 8
Rajshahye "	12·4	21·2
Bhagulpore "	10·5	0·0
Dacca "	3·7	3·0

19. The working of the Presidency Jail was affected in 1887 by the Jubilee remissions, and its earnings are now again almost the same as in 1886. The great falling off in the Buxar Central Jail is reported to be due to a restricted outturn, as a large stock from the previous year remained in hand. In Midnapore the decreased earnings are attributed to light tasks owing to the indifferent health of the prisoners and to slightly lower rates for the outturn. In the Rajshahye Jail the outturn was considerably reduced in March and April through the failure of the contractor to supply the full amount of castor seed due under the previous year's contract; and while the seed supply for the year was purchased at a higher rate than usual, advantage could not be taken of the rise in the market rate of oil, as the greater portion of the production was supplied to Provincial State Railways at a uniform contract rate.

20. *Subsidiary Jails.*—The management of subsidiary jails has not been in all cases satisfactory. It is desirable that the Inspector-General of Jails should devote close attention to enforcing a stricter supervision and improved administration on the Deputy Superintendents in charge of these jails. Rupees 70,106 has been expended on subsidiary buildings against Rs. 38,857 in 1887. During 1888 new subsidiary jails were built to replace the old buildings at eight stations. The condition of the warder guard was on the whole satisfactory. Convicts were detained on an average for 8·21 days at subsidiary jails before being sent on to district or central Jails, the longest period recorded since 1881. At several of these jails prisoners were detained to work on new buildings, and in some cases of jails showing a high average detention they were kept on account of sickness. It is also to be remarked that the subsidiary jail at Palamow has now been converted into an intermediate jail, but that prisoners with sentences of three months and under were detained at this jail though it was classed as a subsidiary jail during the year under report. In Jamalpore, Arrareah, Nowgong, Satkhira, Bagerhat, and the Khond Mehals under-trial prisoners were detained from 27·17 to 21·57 days. This matter will be dealt with in the Judicial Department. There were 19 escapes as against 17 in 1887 and 20 in 1886. The average cost of each prisoner, excluding the expenditure in the Public Works Department, fell from Rs. 127-8-7 in 1887 to Rs. 121-6-7, owing to the increase in the daily average number of prisoners from 768·38 to 847·45.

21. *Vital Statistics.*—There is ample accommodation in the Bengal Jails for far more than the present number of prisoners. It is reported, however, that five of the district jails were more or less overcrowded during some part of the year, and the Inspector-General is requested to report how he proposes to prevent this in future. He is also requested to report how far it is possible to provide within the present buildings increased accommodation for under-trial prisoners.

22. The sickness and mortality of convicts and under-trial prisoners taken together, for the past 10 years, are shown in the following statement:—

Years.	Daily average number of prisoners.	Daily average sick.	Ratio per mille of daily average sick.	Number of deaths. From cholera.	From all other causes.	Total number of deaths.	Death-rates per mille of average strength. From cholera.	From all other causes.	From all causes.	Remarks.
1878	18,611	803	48·1	215	1,072	1,287	11·5	57 6	69·1	Convicted and under-trial only.
1879	18,483	947	51·2	341	1,411	1,752	18·4	76·4	94·8	
1880	17,802	941	52·8	31	1,100	1,131	1·7	61·8	63·5	
1881	16,520	878	52·8	85	1,014	1,099	5·1	61·4	66·5	
1882	15,902	849	53 3	151	933	1,084	9·5	58·6	68·1	
1883	14,776	729	49·3	61	701	762	4·1	47·4	51·5	
1884	14,868	724	48 6	62	678	740	4·1	45·6	49·7	
1885	14,926	773	51·7	157	730	887	10·5	48·9	59 4	
1886	14,579	648	44·4	40	503	543	2·7	34 5	37·2	
1887	12,047	539	44·7	20	379	399	1·7	31·4	33·1	
1888	13,634	631	46·2	132	482	614	9 7	35·3	45 0	
Total	1,72,148	8,457	538·1	1,295	9,003	10,298	79·0	558·9	637 9	
Average	15,649	768	48·9	117	818	936	7·1	50 8	57·9	

23. Notwithstanding the great increase in the death-rate, there are only three years during the last quarter of a century which show a lower mortality, and excluding the deaths from cholera, there are only two years in which the mortality has been so low. The highest death rate is reported from Lohardugga—191·3 per mille. Out of 26 deaths 10 were due to cholera. It is reported that the health of the district was very bad. The very high death-rates in Singbhoom and Maldah—169·8 and 181·9 per mille respectively—are also connected with the unhealthy state of those districts. In Rungpore, where there was a death-rate of 173·6 per mille, 95·5 of it was due to cholera. The death-rate of cholera generally, 9·7 per mille, has only been exceeded in seven years during the last quarter of a century. There were no cases in 30 out of 44 jails, and in only six were there more than two cases. The disease was worst at Rajshahye, where there were 71 cases and 51 deaths. In the six jails with most cases the cholera had a firm hold on the outside population before any prisoners were affected. Measures are now being taken to provide camping grounds for all central and district jails.

24. Though the most marked feature in the year was the increased mortality from cholera, yet there was also an increase in the death-rate from other diseases. The death-rate from dysentery and diarrhœa rose from 12·6 to 15·5. In the case of remittent and continued fever it rose from 1·5 to 2·3; on the other hand in intermittent fever it fell from 2·5 to 1·8.

25. The Lohardugga, Maldah, Rungpore, Singbhoom and Rajshahye Jails, which show the highest mortality in 1888, have had very few deaths during the past four months. The Lieutenant-Governor regrets to find there has been no improvement in the Gya Jail, and trusts the special measures now being taken will have good results.

26. The following table shows the extent to which prisoners discharged from jails in 1888 improved in health during their residence in jails:—

	1. State of health on admission of those who were discharged from jail, as per column 2.				2. State of health on discharge of those who were discharged from jail, as per column 1.			
	Good.	Indifferent.	Bad.	Total.	Good	Indifferent.	Bad.	Total
In 1888	23,285	8,794	2,793	*34,872	26,352	6,774	1,746	*34,872
Ratio per cent to total number discharged from the jail	66·77	25·22	8·01	100·00	75·57	19·42	5·01	100 00

* Excluding the figures from the Bogra Intermediate Jail.

27. These figures show a slightly greater improvement in the health of the prisoners on discharge as compared with their state on admission, than the corresponding return for last year. As regards loss of weight, however, 20·6

per cent. lost weight in 1888 against 19·3 in 1887, while 3·46 lost over five pounds against 2·86 in the previous year. None of the precautions referred to in last year's Resolution have been abandoned, and the increased death-rate does not appear to be in any way due to any relaxation in the efforts of the jail authorities to keep up a high sanitary standard. It is unfortunately impossible to compare the statistics of jail mortality with that of the outside population, as, notwithstanding the efforts made to improve death registration, the statistics are still far too imperfect to make it possible to base any calculations on them. From* calculations made at the last census, it would appear that the average death-rate in Bengal is nearly 40 per mille, while the returns for 1887 gave only 23·46.

* Report on the Census of British India, Vol. I, page 171.

28. *Inspection.*—Dr. Lethbridge inspected 29 jails and 5 subsidiary jails, and Dr. Purves 9 jails during 1888. There was a slight decrease in the number of visits paid by Judges, who might, the Lieutenant-Governor thinks with advantage, visit jails at their own stations more frequently. Considering that the Alipore, Midnapore, Bhagulpore, Rajshahye and Dacca Central Jails are also the district jails of their respective districts, the number of visits paid them by Magistrates were too few. Though not mentioned in the jail report, the Lieutenant-Governor learns that the non-official visitors paid 137 visits to the jails under their supervision, and showed by their notes that they took an interest in the general management of the jails. This subject should be specially noticed in the annual reports of Jail Superintendents in future years.

29. In conclusion, the Lieutenant-Governor desires to record his appreciation of the good work done during the year by the Inspector-General and the officers of the department generally. There has been a steady improvement, more or less marked, in every branch of jail administration, and the Lieutenant-Governor is satisfied that no effort is spared to remedy any defects that may be brought to light.

By order of the Lieutenant-Governor of Bengal,

JOHN EDGAR,

Chief Secretary to the Government of Bengal.

REVIEW OF THE TRANSACTIONS OF THE FINE FUND OF THE PROVINCIAL STATE RAILWAYS FOR 1888-89.

No. 1579R.A.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

RAILWAY—Accounts.

Dated Calcutta, the 3rd June 1889.

RESOLUTION.

READ—

Government of India, Financial Department Resolution No. 427, dated 28th June 1880.
Letter No. 2611, dated the 7th May 1889, from the Manager, Tirhoot State Railway.
Letter No. 358, dated the 9th May 1889, from the Manager, Eastern Bengal State Railway.
Letter No. 282N, dated the 16th May 1889, from the Manager, Nalhaty State Railway.

Read also—

Resolution No. 1954R.A., dated 9th June 1888.

OBSERVATIONS.—The review of the transactions of the Fine Fund of the Eastern Bengal State Railway system comprises those of the Northern Bengal, Kaunia Dhurlla, Dacca, and the Assam-Behar section of the Assam-Behar State Railway.

2. The returns from all the lines under the control of the Government of Bengal for the year 1888-89 have been received, and are summarised in the following table:—

RAILWAYS.	RECEIPTS.				EXPENDITURE.			Balance at end of 1888-89.
	Balance on 1st April 1888.	Fines.	Interest.	Total.	Disbursements.	Refunds.	Total.	
	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.
Tirhoot State Railway ...	637 10 11	1,439 3 7	27 3 3	2,104 1 9	950 0 0	21 10 6	971 10 6	1,132 7 3
Eastern Bengal State Railway ...	8,262 1 10	6,474 0 4	261 5 11	14,997 8 1	7,942 12 3	102 4 6	8,045 0 9	6,962 7 4
Nalhati State Railway ...	103 15 6	42 3 6	2 14 2	149 0 2	86 5 9	......	86 5 9	62 10 5

3. Under the head of expenditure, the principal disbursements were as follows:—

Tirhoot State Railway.—Institute Rs. 100; amusements Rs. 650; volunteering Rs. 200.

Eastern Bengal State Railway.—Institute Rs. 1,510; schools Rs. 2,566; volunteering Rs. 508-10-9; assistance to employés Rs. 2,431-10; amusements Rs. 730; other items Rs. 146-7-6.

Nalhati State Railway.—Schools Rs. 84.

RESOLUTION—In the Resolution of the Fine Fund reports for last year. attention was drawn to the unnecessarily high balance of the Eastern Bengal State Railway system. It is observed from the present reports that the balance of the Eastern Bengal State Railway and the Nalhati State Railway has been reduced. That of the former line is susceptible of further reduction, whilst a tendency to increase is noticed on the Tirhoot State Railway. His Honour the Lieutenant-Governor would again draw the attention of Managers to the expediency of keeping the balances of the fund as low as possible; in funds of this nature, large balances are not desirable. Rs. 2,402-10 was spent by the Eastern Bengal State Railway in supplying menials employed in out-door work, who have to undergo exposure, with blankets; Rs. 400 was advanced to the Volunteer Prize Fund, and Rs. 79 to employés; the two latter amounts have since been recovered.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Government of India, in the Public Works Department, and to the Managers of the Bengal Provincial Railways, for information, and that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

T. E. OWEN,

Offg. Under-Secy. to the Govt. of Bengal, P. W. Dept.

LIBERALITY OF RAJA BAIKUNTHA NATH DE BAHADUR AND HIS BROTHER, SONS OF THE LATE RAJA SHYAMANAND DE BAHADUR OF BALASORE.

THE following is published for general information.

By order of the Lieutenant-Governor of Bengal,

MUNICIPAL DEPT., LOCAL SELF-GOVT.
The 31*st May* 1889.

C. CUTHBERTSON,
Offg. Secy. to the Govt. of Bengal.

Dated the 29th May 1889.

From—C. CUTHBERTSON, ESQ., Offg. Secretary to the Government of Bengal, Municipal Department,
To—The Commissioner of the Orissa Division.

I AM directed to acknowledge the receipt of your letters noted in the margin, in which you report that Raja Baikuntha Nath De Bahadur and his brother, sons of the late Raja Shyamanand De Bahadur of Balasore, being desirous of marking by some public act their gratitude to the Government for the honours bestowed on their family, have offered a sum of Rs 4,020 as a contribution towards the construction and metalling of a road from Balasore to Nalkul, to be undertaken and maintained by the Balasore Local Board. The total cost of the road is estimated at Rs. 4,800, and the Local Board, who have accepted the gift of the Raja and his brother on the terms proposed, have agreed to contribute the balance.

No. 9T, dated the 7th March 1889.
No. 187S.G., dated the 7th May 1889.

2. In reply, I am directed to say that the Lieutenant-Governor accepts the offer made by Raja Baikantha Nath De Bahadur and his brother, and I am to request that you will convey to them an expression of His Honour's appreciation of this further proof of their generosity. This letter will be published in the *Calcutta Gazette.*

GIFT MADE BY THE MAHARAJAH OF DURBHUNGAH FOR THE CLEARING OF THE SHIVAGUNGE TANK AT BAIDYANATH IN DEOGHUR.

The 4th June 1889.—The following letter is published for general information.

By order of the Lieutenant-Governor of Bengal,

C. CUTHBERTSON,
Offg. Secy. to the Govt. of Bengal.

Dated the 3rd June 1889.

From—C. CUTHBERTSON, ESQ., Offg. Secretary to the Government of Bengal, Municipal Department,
To—The Commissioner of Bhagulpore.

I AM directed to acknowledge the receipt of your letter No. 422J, dated the 7th May 1889, in which you report that the Maharajah of Durbhungah has promised to make the munificent gift of Rs. 11,466 for the purpose of carrying out a scheme for preventing the silting up of the Shivagunge tank at Baidyanath in Deoghur, clearing it out, and diverting the drainage of the town from this and other tanks.

2. In reply, I am directed to say that the Lieutenant-Governor has much pleasure in acknowledging the generous offer made by the Maharajah, and to request that the thanks of the Government may be conveyed to him. This letter will be published in the *Calcutta Gazette.*

REPORT ON THE WORKING OF THE LICENSED WAREHOUSE AND FIRE-BRIGADE ACT IV (B. C.) OF 1883 DURING THE YEAR 1888-89.

The 3rd June 1889.—The following report is published for general information.

C. Cuthbertson,
Offg. Secy. to the Govt. of Bengal.

No. 29M.M , dated Calcutta, the 25th May 1889.

From—A. Smith, Esq., Commissioner of the Presidency Division,

To—The Secretary to the Government of Bengal, Municipal Department.

Under section 30 of the Licensed Warehouse and Fire-Brigade Act IV (B. C.) of 1883, I have the honour to submit herewith the usual statements A, B. and C, containing particulars connected with the working of the Act during the year 1888-89.

2. The first statement shews the names of the different hydraulic presses jute mills, cotton mills, hand screws and warehouses for the storage of jute licensed in the suburbs during the year and the amount of license fees collected from them, the second represents in the prescribed form the receipts and expenditure under the Act, and the last contains details of the fires that occurred during the year.

3. There has been no change in the number of hydraulic presses, jute mills, cotton mills and hand screws, but in the case of jute warehouses it increased from 108 to 120, 12 such houses having been newly added to the list. The hand screw in No. 1, Ramgopal Ghose's Lane, which was unoccupied in 1887-88, has been worked during the year of report. Of the 120 jute warehouses, 29 remained unoccupied against 32 in the year preceding, house No 33 not being taken into account, it being a double entry, *vide* note against the entry. The notes in the remark column of statement A will show all these facts and furnish other necessary particulars connected with the working of the warehouses.

4. The total amount of license fees realized from all classes of warehouses during the year amounted to Rs. 35,398-3, viz., Rs 21.624-13 from hydraulic presses, Rs. 1 088 from jute mills, Rs 240 from cotton mills, Rs. 645 from hand screws, and Rs. 11,800-6 from jute warehouses, against a total sum of Rs 33,975-12, viz., the same amounts from hydraulic presses, jute mills and cotton mills, Rs. 165 from hand screws, and Rs 10,857-15 from jute warehouses received during the preceding year. Thus there has been a net increase of Rs 1,422-7 in the license fees during the year of report, as compared with the result of the previous year

5. There were nine fires during the year as per details in statement C supplied by the Police, causing a loss to the extent of about Rs. 1,38,175 against 11 fires and a loss of Rs. 10,250 in the previous year.

A.

List of Jute and Cotton Warehouses licensed in the Suburbs of Calcutta during the year 1888-89.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 1st June 1889.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.	*Western Districts.*		
BURDWAN DIVN.			
1	Burdwan June 1, '89 Raneegunge ...	0·55 1·02	Weather—hot. More rain wanted throughout the district. Standing crops doing well. Common rice 15 seers at Culna, 14¼ seers at Cutwa, 14½ seers at Raneegunge, and 15¼ seers at Sudder.
2	Bankoora „ 1, '89 Bissenpore ...	1·08 1·40	Weather—seasonable. Ploughing and sowing of fields for next rice crop going on briskly everywhere. Common rice sells at 17½ seers per rupee at Sudder as well as at Bissenpore.
3	Birbhum „ 1, '89 Rampur Hât ...	0·72 0·42	Weather—very hot. Sky overcast. The rain has done a great deal of good and ploughing is actively going on. Prices of rice steady at 13½ seers per rupee.
4	Midnapur „ 1, '89	0·13	Weather—has become hot again and no sign of more rain. The recent rain was useful, but more is wanted at once. Prospects of indigo will be very bad unless there is rain within a week. *Til* crop in Ghatal has failed entirely for want of rain. Prices of rice are— Rs. A. P. Midnapore ... ... 2 9 3 per maund. Contai ... ... 2 8 0 ditto. Ghatal ... ... 2 8 0 ditto. Tumlook ... ... 3 0 0 ditto.
5	Hooghly „ 1, '89 Serampore ... Jehanabad ...	...... 0·05 0·24	Temperature has fallen. More rain wanted. Prices stationary.
	Howrah „ 3, '89	0·43	Weather—windy; fairly cool. More rain much wanted. Tilling for *aus* and *amun* begun. Price of common rice still high—13½ seers per rupee.
	Central Districts.		
PRESIDENCY DIVN.			
6	24-Perghs. June 4, '89	1·09	Weather—hot with high winds and passing clouds. Prospects much improved in consequence of the rain which has fallen of late. Sowing of rice and jute proceeding, and ploughing general. Price of common rice has fallen slightly in the Diamond Harbour sub-division.
7	Nuddea „ 1, '89 Kooshtea ... Ranaghat ...	Nil 0·22 0·46	Weather—unusually hot with high south winds. Sowings of early rice have been completed in the Chooadanga sub-division, but in other places they are still going on. Rain urgently wanted. Sowings of jute and early rice will be stopped if there be no rain soon. Sugarcane on the field doing well.
8	Khoolna „ 1, '89	Nil	Weather—hot. No rain during the week in Khoolna or Bagirhat, but ·66 inch has fallen in Satkhira, where some *aus* and jute have been sown; a little jute has also been sown in the Sudder, but cultivation is everywhere backward and prospects are unsatisfactory.
9	Jessore „ 1, '89 Jhenidah .. Magura ... Narail ... Bongong ...	0·16 0·78 1·56 2·20 0·20	Weather—very hot with high wind. The slight rain which fell during the week has done some good to the sowings. More rain is urgently wanted. Prices of rice stationary.
10	Moorshedabad „ 1, '89 Lalbagh ... Jungipore ...	0·12 0·63 0·60	Close and hot weather with passing clouds. Southerly wind and a little rain. More rain is needed in Jungipore and Lalbagh. Prospects continue good.
11	Dinagepur „ 1, '89 Thakurgaon ...	0·91 0·11	Weather—hot with variable winds. The continued absence of heavy rain leaves very little prospect for the *bhadoi* rice and jute crops. Very little of the former has been sown yet. Price of common rice 14 to 15 seers per rupee.
RAJSHAHYE DIVN.			
12	Rajshahye „ 1, '89 Nattore ...	Nil 0·02	Weather—very hot; strong south winds for the last two days. Rice, jute, and *til* sowings delayed, and seedlings withering for want of rain. Price of rice averages 14½ seers per rupee, and is rising.
13	Rungpore „ 1, '89 Gaibanda ... Kurigram ... Nilphamari ...	0·89 2·02 0·10 1·27	Weather—unsettled, sultry with occasional storms. The cry is still for rain, especially in the south, where large areas are still fallow. A partial failure of jute and sugarcane has resulted from the drought. Paddy is coming up fairly well. Price of rice shows a decided upward tendency.
14	Bogra „ 1, '89 Sherpore ... Nowkhilla ...	0·22 0·47 1·03	Weather—excessively hot, and in the middle and west of the district excessively dry. Winds variable. The sowing of jute and rice is still going on, but the sowing and the growth of the seedlings are sadly retarded by the prolonged drought. Rain is very badly wanted. The *aus* crop has been sown on about 12 annas of the usual area. The prospects of sugarcane and *til* are also poor. Cattle disease is rather prevalent in some parts. The price of rice has risen. Common rice is now selling at 12 to 13 seers a rupee.
15	Pubna „ 1, '89	Nil	Weather—hot. Local showers. Prospects of crops in Serajgunge sub-division satisfactory, but not so good in Sudder sub-division, where sowings of *aus* and *amun* are restricted by insufficient rain. Common rice sells at 14 seers per rupee.
16	Darjeeling „ 1, '89	0·85	Weather—sultry. Crops progressing favourably, but more rain wanted. Sowings of jute and *bhadoi* nearly finished in Terai. Sowing of *haimanti* commenced.
17	Julpigoree „ 1, '89	0·04	Weather—hot and occasionally cloudy. Sowing of *bhadoi* and jute completed. Prospects generally good. Preparation of land for *haimanti* commenced in places. Rain is urgently wanted. Common rice sells at 16 seers per rupee at the Sudder station.
	Eastern Districts.		
DACCA DIVN.			
18	Dacca June 1, '89	0·78	Weather—hot with occasionul storms. Heavy rain in Naraingunge on the 26th, 28th, and 29th. Sowing of *amun* and *aus* paddy nearly completed. Jute sown on 9 annas of the usual area, and is coming up well. No special change in the prices of food-grains. Fodder is available.
19	Furreedpur „ 1, '89	0·10	Weather—cloudy and unsettled. Very hot. Sowing of paddy almost completed; but prospects of *aus* not favourable owing to want of rain. Prices steady.
20	Backergunge „ ...	......	Report not received.
21	Mymensingh „ 1, '89	1·77	Weather—hot and cloudy. Prospects of crops good.

No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
	Eastern Districts—concld.			
Chittagong Divn.				
22	Chittagong	June 1, '89	0·77	Weather—seasonable. Prospect of *aus* is not good owing to the want of sufficient rain, but that of other miscellaneous crops is fair.
23	Noakholly	„ 1, '89	2·69	Weather—warm and sultry. Sowing of *aus* finished More rain is necessary for the crops. Price of rice stationary.
24	Tipperah	„ 1, '89	1·00	Weather—hot and close. A little *amun* is still being sown in Brahmanberiah. Crops generally doing well. More rain wanted.
25	Chittagong Hill Tracts	...	......	Report not received.
	Hill Tipperah	June 1, '89	1·18	Weather—hot. Sugarcane and jute doing well. Sowing of *aus* paddy completed. Rice selling at 14 seers per rupee.
BEHAR.				
Patna Divn.				
26	Patna	June 1, '89	0·95	Weather—hot. Rain will help the cultivators to prepare lands for *bhadoi* sowings. It has also benefited sugarcane and *cheena*. Prices of food-grains almost stationary.
27	Gya	„ 1, '89	Nil	Weather—very hot. Sugarcane doing well. Prices of food-grains stationary.
28	Shahabad	„ 1, '89	Nil	East winds have generally prevailed and temperature has been lower. The recent showers, which were heavy in parts of the district, have enabled land to be ploughed for the *bhadoi* crop. Prices stationary. Markets well supplied.
	Sasseram	.	0·03	
29	Durbhunga	„ 1, '89	Nil	Weather—very hot with high east winds. In places where the late rain has fallen, the prospects of *dhan*, *mung*, and indigo have much improved. *Bhadoi* crops have commenced to be sown. More rain is immediately wanted to facilitate ploughing operations. Common rice is selling at 11¼ seers to the rupee.
30	Mozufferpur	„ 1, '89	0·15	Weather—cloudy in first half of week, clear and hot in last half. Rain is much wanted. In some places the rice seedlings are suffering for want of rain. Indigo prospects are very unequal, in some places fair and even good, in others bad.
	Hajipur	...	0·19	
	Sitamarhi	...	0·30	
31	Sarun	„ 1, '89	0·10	Weather—some storms at first; now very hot with west winds. Rice nurseries and *cheena* and indigo benefited by rain. Lands everywhere being prepared for *bhadoi* crops.
32	Chumparun	„ 1, '89	0·25	Weather—very hot with varying winds. Recent showers have been of great benefit, though more rain is badly wanted. Paddy sowings generally in progress. Prices have fallen slightly.
	Bettiah	..	0·52	
Bhagulpore Divn.				
33	Monghyr	„ 1, '89	Nil	Weather—hot and sultry. Ploughing for *bhadoi* sowings going on everywhere. More rain wanted. Prices stationary.
	Beguserai	...	0·83	
	Jamooe	..	0·19	
34	Bhagulpur	„ 1, '89	0·23	Weather—very sultry again. In the south cultivation is proceeding, and *bhadoi* sowings have been getting on, but cannot yet be completed on high lands without more rain. In the two north-east pergunnahs of Soopool sowings are retarded, and rain is urgently required. Over rest of the northern subdivisions about half the early rice has been sown, but not a fourth of the marua. Prospects bad. Price of rice varies from 11 to 13 seers per rupee.
	Banka	...	0·22	
35	Purneah	„ 1, '89	0·80	Weather—very hot and sultry. Crops require very much more rain. Rain will come too late if it is delayed much longer.
	Arrareah	...	0·25	
36	Maldah	„ 1, '89	Nil	Weather—hot and cloudy. Harvesting of *boro* rice still going on; an average outturn is expected. Much more rain is wanted for the preparation of lands for winter rice, and for *bhadoi* sowings and for indigo, jute, &c. Common rice selling at an average of 13¼ seers per rupee.
	Shibgunge	...	0·25	
	Gajole	...	018	
37	Sonthal Perghs.	„ 1, '89	1·13	Weather—very hot again during the latter part of the week. Sky clear. Paddy is being sown in Deoghur, Godda, Pakour. Rajmehal, and Dumka. Jamtara is still suffering from scarcity of rain. More rain is wanted everywhere. Prices continue to be very high. There has been a considerable falling off in the number of persons on relief works since last week.

CALCUTTA; REVENUE DEPT.,
The 4th June 1889.

P. NOLAN,
Secy. to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of May 1889.

	Inches.	Date.	Hour.
The mean pressure of the month	29·679		
The average pressure of May from 24 years' registers ...	29·656		
The highest pressure in the month	29·836	17th	10
The lowest pressure in the month	29·499	19th	16
The range of pressure	0·337		
	Hours.		
The total number of hours of bright sunshine during the month	273·1		
The maximum possible number of hours of sunshine ...	408·3		
	°		
The mean temperature of the month	87·4		
The average temperature of May from 24 years' registers ..	86 1		
The highest temperature in the month	101·8	2nd.	
The lowest temperature in the month	70 4	22nd.	
The range of temperature during the month	31·4		
The mean daily range of temperature	15·7		
The greatest range of temperature in one day	22·2	20th.	
	Per cent.		
The mean humidity of the month	74		
The average humidity of May from 24 years' registers ...	73		
	Inches.		
The mean vapour tension of the month	0·958		
The average vapour tension of May from 9 years' registers ..	0·933		
The mean cloud proportion of the month	3 38		
The average cloud proportion of May from 12 years' registers	4·55		
	Inches.		
The total rainfall of the month	3·53		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	3·30		
The average fall of May from 48 years' registers ..	5·40		
The greatest fall in 24 hours	1·46	21st.	
	Days.		
The number of rainy days in the month	8		
The average number of rainy days in May from 24 years' registers	13		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	154·2		
The mean difference of sun and air temperatures	59·3		
The greatest sun temperature	161·2	2nd.	
The greatest excess of sun over air temperature	65·7	13th.	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	76·9		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2·4		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	5·1	18th.	
	Miles		
The mean movement of the wind per day	227·7		
The greatest movement of the wind in one day	362·0	5th.	
The greatest movement of the wind in one hour	27·0	21st 4 to 5 P.M.	

The number of hours with winds from each of the 8 points—

N. 9, NE. 6, E. 18, SE. 26, S. 261, SW. 348, W. 16, NW. 9, Calm 51.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0·5° lower; and finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

N.B.—In the monthly abstract for April 1889 read "26" for "56," the number of hours with wind from N. W.

A. PEDLER,
for Meteorological Reporter to the Govt of India.

* Mean of 6 days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten-yea[rs] ... The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numb[ers] ... are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past ... which at least hundredth of an inch fell.

[F]or the week ending Friday, the 31st of May 1889.

Explanation.—... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 4*th June* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, DURING THE WEEK ENDING 31ST MAY 1889.

Though local showers have continued to fall throughout the week, weather conditions have been much more settled than previously, and have become of the usual hot-weather character. In consequence of the unsettled weather which was passing off at the end of the previous week, pressure at the beginning of the present one was rising somewhat rapidly; temperature was everywhere several degrees below the normal; humidity and cloud proportion continued high, and rain fell over the greater part of the province. Pressure continued very uniform for some days over the whole province, and light winds or calms prevailed. The rise of pressure lasted only two days, and a fall setting in on Monday continued till the end of the week, except on Wednesday, when a slight rise occurred everywhere. Temperature was rising on Saturday, and continued steadily to rise in all districts except Assam. On Monday temperature was in excess in Assam and at many stations in North, East and South-West Bengal, but was still about 2° in defect in Behar and Orissa. In consequence of the steady rise, high temperatures prevailed during the latter half of the week. With the rise of temperature, humidity and cloud began to diminish, more especially in the western districts, where dry hot weather prevailed from Wednesday till the end of the week. Though after the first two days pressure was generally falling, the uniform pressure did not continue, and winds in consequence increased in strength. This change began to set in on Tuesday, when the easterly element in the wind directions disappeared, and south-westerly winds extended as far as the centre of Behar. The showers after the first day or two were confined to the eastern districts, and especially to Assam. In South-West Bengal and Orissa nor'-westers occasionally occurred, and a rather severe storm passed over False Point on Wednesday; the wind velocity rising to 52 miles an hour. By the middle of the week rain had entirely ceased in Behar and Chutia Nagpur. The showers that have occurred during the week have been generally light, falls of over an inch being very exceptional.

Pressure.—Pressure changes have been generally small, and the more rapid ones occurred in Behar, Chutia Nagpur, and North Bengal during the first half of the week. On Friday there was a general rise of over a twentieth of an inch everywhere, and more than a tenth in Chutia Nagpur. The rise on the following day was not large, but pressure was everywhere in excess, especially at the western stations, where it amounted to more than ·1″. On Thursday pressure was generally in defect, though by very small amounts. The largest fall of the week occurred on that day, and varied from ·05 inch to ·1 inch. At the end of the week pressure was in excess at all stations in Orissa, and at a few in South-West Bengal; elsewhere there was defect, largest in North Bengal and Behar, and amounting at some stations to nearly a tenth of an inch. As stated above, pressure was very uniform in the early part of the week, the greatest difference not being much over a twentieth of an inch. This difference increased during the week, and on Friday amounted to about three twentieths. Mean pressure has been everywhere in excess, the largest being in Orissa, South-West Bengal, and Behar, where it varied from 05 inch to ·07 inch; elsewhere the excess has been generally small.

Temperature.—From being very low, temperature kept steadily rising, and by the end of the week was in all districts, except Assam, considerably above the normal. The largest defect on Saturday, the 25th, was nearly 7°, and the average defect about 3°. This defect continued in Behar till about the middle of the week, at which time there was excess elsewhere of from one to four degrees. It scarcely changed from this in the eastern districts, but on Thursday and Friday there was a large excess in Behar and Chutia Nagpur, and at some stations of North Bengal. At Rampore Beauleah it amounted to nearly 10°. Average temperature has been generally slightly in excess; in South Behar and Chutia Nagpur the excess, if any, has been slight; in Orissa and Assam it has been under one degree; in other districts it has been about 1·5°, except in North Bengal, where it amounts to nearly 3°.

Rainfall.—Light showers were fairly general in the early half of the week, but these entirely ceased in the western part of the province during the last three days. Only in exceptional cases did the amount of rain exceed one inch, and rain is therefore everywhere largely in defect of the normal. The largest falls were in Orissa and East Bengal, and exceeded one inch; elsewhere the average fall was under half an inch, except in Chutia Nagpur where it amounted to ·55 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 31st May 1889 :—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1889.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The average fall of the corresponding period for 24 years, S.-G.'s Office ...	9·76

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, p passing temporary showers, lr. lighting reflection, K thunderstorm, ⌓ dew, t thunder.

A. PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE mortuary returns of the districts in Bengal (excluding Kissenganj Police-station in Purneah, from which no return has yet been received) for the month of February 1889, furnish the following particulars :—

1. The deaths of 96,879 persons were registered among a population of 66,055,695, representing a death-rate of 17·52 per 1,000 per annum, against 23 04 per 1,000 in the preceding month, and 19 08 per 1,000 during the corresponding month of 1888, indicating, as compared with both the past periods, a large reduction in the registration of deaths.

2. The highest deaths-rates were returned from the following districts :—

Districts.	Ratio per *mille.*	*Districts.*	Ratio per *mille.*
Backerganj	27 84	Rungpore	24·84
Noakhali	27·00	Julpaiguri	24·60
Dinajpur	25·68	Birbhum	24·24

3. As compared with the casualties of the corresponding month of the past year, the mortality from fever had diminished considerably, the death-rate from injury was stationery, and there were no noticeable differences in fatal results from the other diseases; see figures given below :—

	Ratio per *mille* during—	
	February 1889.	February 1888.
Cholera	·84	·60
Small-pox	·12	·08
Fever	12·60	11·28
Bowel-complaints	·60	·72
Injury	·12	·12
Other causes	3·00	3·12

4. Cholera and fever caused the greatest loss of life in the following districts; the other diseases did not exhibit high mortality anywhere, excepting in Puri, where 13·20 per 1,000 of the population died from the maladies classed under the head of "Other causes":—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*
Backerganj	5·64	Dinajpur	23·52
Howrah	4 32	Rungpore	23·52
24-Pergunnahs	3·48	Julpaiguri	22·68
Balasore	3·00	Noakhali	21·72
Tipperah	2 88		
Murshidabad	2·40		
Midnapore	2·16		

5. Under the heads of *Sex*, *Class* and *Age*, the mortality of the month stood as follows :—

According to Sex.

	Ratio per *mille.*
Males	19·32
Females	15·84
Ratio of male deaths to every 100 female deaths	120

According to Class.

	Ratio per *mille.*
Christians	11·28
Hindus	16·56
Mahomedans... ...	19·56
Buddhists	21·36
Other classes ...	16·32

According to Age.

	Ratio per *mille.*
Under 1 year ...	131 40
1 and under 5 years ...	13·92
5 „ 10 „ ...	6·60
10 „ 15 „ ...	6·72
15 „ 20 „ ...	11·04
20 „ 30 „ ...	11·64
30 „ 40 „ ...	14 04
40 „ 50 „ ...	19·08
50 „ 60 „ ...	27·24
60 years and upwards ...	49·44

The 4th June 1889.

W. H. GREGG, *Dip. Publ. Health, Camb.,*
Sanitary Commissioner for Bengal.

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,

The 4th June 1889.

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

MEMORANDUM.

THE leading features in connection with the vital statistics of the principal Municipalities in Bengal for the week ending 18th May 1889 are the following:—

1. Births and deaths were registered in these Municipalities in the proportions per 1,000 of population of 17·0 and 20·0, respectively, as opposed to 18·9 and 21·6 per 1,000, respectively, in the preceding week ending 11th May, indicating a retrogression in the registration of both.

2. The following Municipalities furnished the highest proportions of births and deaths:—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Darjiling	45·6	Puri	52·5
Rampore Beauleah	31·5	Serampore	39·3
Naraingunj	29·0	Gya	33·5
Hughli	28·2	Bhagulpore	32·6
		Jessore	30·6

3. In comparison with the results of the preceding week, there was a diminution of mortality from cholera and fever, but no noticeable differences in the death-rates from the other diseases; *vide* figures quoted below:—

	Ratio per *mille* during the weeks ending— 18th May 1889.	11th May 1889.
Cholera	2·9	4·2
Small-pox	·4	·6
Fever	7·1	8·8
Bowel-complaints	2·4	1·8
Injury	·6	·4
Other causes	6·6	5·8

4. The following Municipalities returned conspicuously high mortality from cholera and the maladies coming under the head of "Other causes," and no Municipality exhibited any noticeably high suffering from the other diseases mentioned in the foregoing table, excepting Jessore, where 24·5 per 1,000 of the population died from fever:—

Cholera.	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Puri	25·2	Serampore	19·6
Kishnaghur	11·3	Bhagulpore	19 0
Serampore	7·9	Puri	16·8
Bhagulpore	4·5	Gya	10·9
Patna	3·6	Monghyr	9·9
Howrah	2 9	Howrah	9·2
Dacca	2·6		

5. The death-rates according to *Sex, Class* and *Age* stood as shown below:—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	21·8	Christians	13·1	Under 1 year ...	164·8
Females	18·1	Hindus	20·0	1 and under 5 years ...	25·6
Ratio of male deaths to every 100 female deaths	130	Mahomedans ...	20·4	5 " 10 " ...	10·3
				10 " 15 " ...	10·2
				15 " 20 " ...	22 3
				20 " 30 " ...	12·0
				30 " 40 " ...	12·6
				40 " 50 " ...	15·2
				50 " 60 " ...	25·3
				60 years and upwards ...	33·0

W. H. GREGG, *Dip. Publ. Health, Camb.*,
Sanitary Commissioner for Bengal.

The 3rd June 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

INCREASES.

	Tons.
Seeds	2,343

Goalundo, Serajganj, and Naraingunj show the principal increases. There was a good business done early in the month at Calcutta in linseed for America.

Railway plant, &c.	1,129

For maintenance and renewals.

DECREASES.

Rice	8,632

Due to partial failure of the rice crop in Bengal. Parts of the northern section seem to have suffered considerably, while Parbatipur and Dinagepur show substantial increases.

The decrease on the southern section is general.

Jute	2,937

Dacca and Naraingunj show large decreases in screwed jute. There are also decreases in unscrewed jute from the northern section.

Betelnuts	637

Decrease from the northern section.

Salt	2,758

The principal falling off is from Chitpore, 59,357 maunds. It was understood, owing to some statement made by the Secretary of State for India in the House, that the duty would be reduced in April, and despatches were withheld.

Sugar	953

Decreased outturn and a dull market.

Firewood	694

Ordinary fluctuations.

Increases.

	Tons.
Coal ...	1,872
For railway and flotilla purposes principally.	
Oilseeds ...	146
A fair business done early in the month in linseed for America.	

Decreases.

Rice ...	1,134
Due to partial failure of crops in the district.	
Betelnuts ...	681
There was a falling off of 2,500 maunds in the Khoolna local, and 1,500 maunds in the through booked traffic from the Bengal Central Flotilla. The traffic is coming into Calcutta by river, taken by the Bengal Central Flotilla direct.	
Sugar ...	880
Due to increased outturn, Jhikargachi showing a decrease of 9,593 maunds, and a dull market.	

CALCUTTA, *the* 30*th April* 1889.

INCREASE.

	Tons.
Cotton piece-goods—	
(1) European	44
Probably due to an alteration of classification. There is a corresponding decrease under cotton twist and yarn.	
Grains—	
(4) Gram	19
This increase is due to there being no traffic under this head last year.	
Oils—	
(3) Others	14
This increase is due to high market rate in the local bazars.	
Provisions—	
(3) Others	13
Due to greater imports of potatoes this year.	
Salt	46
The former stock being exhausted, the merchants imported greater quantities to keep in stores. Hence the increase.	
Oilseeds—	
(1) Linseed	72
Due to favourable demand.	

DECREASE.

	Tons.
Coal	256
Due to previous stock not being exhausted.	
Cotton twist and yarn—	
(1) European	44
Grains—	
(2) Rice	337
Due to less exports owing to the unfavourable state of crops this year.	
Railway plant and rolling-stock	23
Due to less materials being carried this year.	
Oilseeds—	
(2) Mustard and rape	59
(6) Others	19
Due to less demand.	
Silk raw—	
(2) Indian	11
Due to dull market.

RESOLUTION ON THE REPORT ON INLAND EMIGRATION FOR THE YEAR 1888.

GENERAL DEPARTMENT—INLAND EMIGRATION.

Darjeeling, the 27th May, 1889.

RESOLUTION.

READ—

The Report of the Superintendent of Emigration, Calcutta, No. 837, dated the 30th April 1889, on Inland Emigration, for the year 1888.

Personal.

The office of Superintendent of Emigration was held during the early part of the year by Dr. Grant, the permanent incumbent, Dr. Gregg, and then Dr. Comins officiating subsequently. The thanks of the Lieutenant-Governor are conveyed to all three officers for their attention to their duties during what has been an unusually trying season.

Recruitment.

2. It has been remarked in more than one previous Resolution that the number of labourers recruited by persons licensed to make engagements under Act I of 1882 was rapidly decreasing, having fallen from 31,286 in 1884 to 9,693 in 1887. During 1888 this tendency was checked, the number recruited in the manner indicated rising to 13,548. The falling off in former years was due to the development of free emigation, or unlicensed recruiting; while the reaction which has now set in is attributed by the Superintendent to the discouragement of that system by employers, owing to the increased expense of obtaining labourers under it, and the insecurity attending their conveyance to their

destination. The Superintendent will be requested to report to Government any information which he may possess as to this enhancement in the cost of free recruiting, the subject being one of the first importance. Notwithstanding the appreciable increase in the number of labourers recruited under the Act, the great majority of emigrants are still conveyed by private arrangement, as appears from the fact that 21,851 were conducted on this system to the Assam Valley during the year, of whom 21,323 executed statutory contracts at Dhubri. The number of free emigrants to Sylhet and Cachar is not known. The great bulk of the registered labourers are classified as engaged by garden sirdars, but it is understood that the importance of the distinction between recruitment by sirdars and recruitment by contractors has diminished in recent years, as most of the sirdars now work under local agents, who are in reality contractors. The whole subject of recruitment in its various forms is under consideration with a view to the correction of abuses recently disclosed.

Sanitary condition of licensed depôts.

3. The Lieutenant-Governor notices with satisfaction that the Superintendent is able to report favourably of the condition of the depôts in which registered labourers are detained pending their removal to Assam. It is stated that there was no over-crowding, that the conservancy arrangements were satisfactory, the water-supply was good, the food sufficient and wholesome, and that the percentage of sickness was 2·3 to the total population, a proportion which does not appear to be excessive. As to the deaths which occurred, the report states that the rate of mortality during the past three years was—

In 1886	...	... 2·4 per *mille* of total admissions into depôt.
„ 1887	...	... 1·3 ditto ditto.
„ 1888	...	... 2·1 ditto ditto.

Cholera prevailed to some extent during the year under review in the recruiting districts and in the Suburbs of Calcutta, and two cases occurred in one of the depôts among emigrants who were recruited in the Suburbs. The patients were at once removed to the Campbell Hospital, and both ultimately recovered.

The causes of mortality in the depôts were—

Pneumonia	1
Anæmia and gangrene	1
Premature birth	1
Total ...	3

If the last death be excluded, as it should be, from the list of depôt casualties, the year's percentage of mortality will be nearly the same as that of 1887.

The Superintendent does not refer to the depôts for unregistered emigrants, which have not hitherto been under his supervision: but it is known from other sources that in these there is much room for improvement, and an Act has been recently passed to ensure their inspection in future.

Transport.

4. Detailed information is given in the report as to the labourers conveyed *viâ* Goalundo, by which route 2,551 were taken to Assam, 552 to Cachar, and 81 to Sylhet. Among those proceeding by Goalundo to Assam, there were seven deaths from cholera. But there are no returns as to the emigrants adopting the Dhubri route, who now constitute the great majority, and no remarks as to them are offered in the report. The facts come more fully before the Assam Administration, but it is known to this Government that great mortality occurred during the year on this line, over six hundred emigrants having died from cholera. The Superintendent will be requested to collect what information he can as to transport by the Dhubri route, and to embody it in future reports. He has taken much interest in effecting improvements, and the absence of reference to the subject under the head of Transport is no doubt due only to the want of official returns and to the system on which these reports have hitherto been compiled.

Administrative measures.

5. The Superintendent notices that, in consequence of the outbreak of cholera, emigration from certain districts was at first discouraged, and in April absolutely prohibited by an order under Act I of 1882. He observes—

With a view to preventing the spread of cholera among coolies under conveyance to Assam, the agency that was employed in 1887 for the medical inspection of coolies at Mugra

station, East Indian Railway, was in April 1888, with the sanction of Government, transferred to Naihati station, Eastern Bengal State Railway, where coolies proceeding direct by the Hughli bridge are detained for a few hours in the rest-houses or depôts before resuming the journey to Dhubri. The establishment of a cholera hospital at Kurigram station, Kaunia and Dharla State Railway, was also sanctioned for six months of every year, from January to June, under the supervision of the Civil Hospital Assistant, who was required to medically inspect all coolies *en route* to Jatrapore Ghât for embarkation for Dhubri, and to detain for medical treatment every coolie found to be suffering from cholera.

In July 1888 the necessity for the disinfection of railway carriages used by coolies was brought to the notice of the Railway Authorities.

The question also of securing improvements in respect of the treatment of coolies in railway carriages during conveyance to the places of embarkation for the labour districts came under the consideration of Government, and the then Officiating Superintendent of Emigration, Surgeon-Major W. H. Gregg, submitted the following suggestions:—

(*a*) That railway carriages should be strictly reserved for conveyance of coolies, and a fixed number only be allowed to travel in each carriage.

(*b*) That in view of the established fact that the risk of an outbreak of cholera is greater in proportion to the larger number of coolies, especially junglis, brought together, the number of emigrants under despatch at one and the same time should be limited.

(*c*) That medical inspection of every batch under despatch from Ranigunge or other forwarding station should be insisted on with a view to the detention of every coolie found unfit to proceed.

(*d*) That the long train journey to Dhubri should be divided into stages, and that halts at certain convenient stations, such as (1) Naihati or Kanchrapara, (2) Sara, and (3) Parbatipore, should be provided by despatchers of emigrants to afford opportunities for resting and feeding, the first-named stations answering also as halting places for emigrants travelling to Goalundo for embarkation.

In August 1888 the insanitary state of the coolie depôts at Ranigunge having been brought to the notice of Government, an enquiry was ordered, and Dr. Gregg reported the sanitary arrangements of some 20 to 25 depôts belonging to known persons, and those of many private depôts, to be very defective, and the necessity for bringing all depôts, including those for free labourers, under sanitary protection to be urgent.

In December 1888 the Embarkation Agent at Goalundo was instructed, in accordance with the suggestion of the Chief Commissioner of Assam, to inform by telegram the district officers concerned of the prevalence of cholera among the coolies embarking for conveyance to the tea gardens, so that precautionary measures might be adopted on their arrival at their destination to prevent the spreading of the disease.

As the year under review was drawing to a close, a few cases of cholera among coolies travelling by the Eastern Bengal State Railway were reported, and the Sanitary Commissioner, Bengal, was directed to inspect the depôts or rest-houses from which the infected coolies were despatched, with a view to the introduction of such sanitary improvement as might be possible.

The steps taken by this Government through the police to prosecute offences committed in the course of obtaining recruits are not referred to in the report, as they did not come under the cognizance of the Superintendent: but it may be mentioned that in this respect, as well as in regard to sanitary measures, action has been taken during the year which is of great importance in the interest of organized and protected emigration.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

RESOLUTION ON THE ADMINISTRATION REPORTS OF THE REFORMATORY SCHOOLS AT ALIPORE AND HAZARIBAGH FOR THE YEAR 1888.

JAILS.

Darjeeling, the 3rd June 1889.

READ—

(1) Letter No. 3438, dated the 6th May 1889, from the Inspector-General of Jails, forwarding the Report of the Administration of the Alipore Reformatory School for the year 1888.

(2) Letter No. 3439, dated the 6th May 1889, from the Inspector-General of Jails, forwarding the Report of the Administration of the Hazaribagh Reformatory School for the year 1888.

Read also—

The Reports for the year 1887, and the orders of Government recorded thereon.

At the Alipore School the number of boys at the commencement of the year 1888 was 108, and at its close 106. 24 were admitted during the year, while 25 were released and 1 escaped through the negligence of a warder, who was put on trial and sentenced to imprisonment. There were no serious offences, and discipline was maintained with a smaller number of punishments than in 1887. Punishment by cutting marks appears to have been in a great measure superseded by direct fines of money earned by the boys. There was a decrease in the number of cases in which penal diet was resorted to as a punishment, while more boys were punished by being locked up in cells. The health of the school was remarkably good. Admissions to hospital fell from 2·73 in 1887 to 2·43 in 1888; and it is satisfactory to observe that there was no casualty during the year.

2. No change has been made in the way in which the day is divided between school and work, except in the hour of lock up, which has been changed from 6-30 to 6 P.M. The boys work for seven hours, and have in addition one hour of compulsory school. They can also attend the night school from 6 to 8 P.M. It is satisfactory to observe that the average number of boys present at the night school increased from 90 in 1887 to 98 in 1888. Here and at Hazaribagh English is taught to the more advanced boys The mark system continued to work well. The number of boys entitled to marks increased, and the average weekly earnings rose from Rs. 2-0-4 in 1887 to Rs 2-4-3. The total amount earned during the year was Rs. 208-6, including payments for extra work, of which Rs. 155-4 were deposited in the Government Savings Bank.

3. Of 64 released boys, concerning whom reports were received, it appears that 9, or 14·06 per cent were in jail. 6 only out of 64 follow the trades they learned at school, 9 boys cannot be traced, and 1 has died; the remaining 45 boys are said to bear a good character.

4. The cost of maintenance fell from Rs. 126-1-10 to Rs. 125-9-6 for each boy, while the cost of diet rose from Rs. 3,156-4-9 in 1887 to Rs. 3,277-14-3, owing to the higher rates paid for articles of rations.

5. The manufactory account shows a profit to the school of Rs. 7,023 against Rs. 8,521-15-6 in 1887. No allowance is made in the account for value of the labour of the boys employed, or for wear and tear of block: it merely shows the balance of actual receipts over actual expenditure. Book-binding, carpentry and tinsmiths' work showed net profits of Rs. 3,270-6-6, Rs 1,132-13-2, and Rs. 1,479-13-3, respectively. The profits on cane-work increased from Rs. 313-5-10 in 1887 to Rs. 335-12-5. Printing was introduced in the middle of December 1888, and the Inspector-General of Jails will be asked to notice the result of the experiment in his report for 1889.

6. The Lieutenant-Governor is glad to observe that the Superintendent, Mr. Kirschner, continues to deserve the praise of the Board of Management and of the Inspector-General of Jails. The acknowledgments of Sir Steuart Bayley are also due to the Board of Management.

7. The number of boys confined in the Hazaribagh School decreased from 232 at the close of 1887 to 223 at the close of 1888. The daily average population was 229·5 against 225 in 1887. The health of the school was not so good as in the two previous years. Admissions to hospital were 133 against

91 in 1887, and the daily average sick 6·67 against 2·93. There were five deaths against one in the previous year.

8. There was a marked improvement in discipline during the year: 123 boys were neither punished nor reported. There were only 367 punishments against 570 in 1887. There was a decrease in the number of punishments under all the heads.

9. The daily routine is the same as at Alipore, except that the hours of the night school differ slightly; the night school at Hazaribagh being held from 6 to 7-30 P.M. It is very satisfactory that out of 229·5, the daily average number, 222 boys on an average attended the night school. The mark system worked well. The average earning per week was Rs. 9-15-2 against Rs. 9-15-1 in 1887. The total earnings came to Rs. 570-6 against Rs. 517-2-9 in the previous year.

10. Reports were received regarding 70 boys; 59 reports were favourable; in 7 cases the whereabouts of the boys were not known; 3 had been re-convicted and sent to jail, and 1 boy was looked upon with suspicion by the police. 14 boys continued to work at the trade they learned in school.

11. The expenditure rose from Rs. 77-9-5 per head in 1887 to Rs. 89-13-10 in 1888. The increase was mainly due to the outlay on new buildings and to the increased price of provisions.

12. The manufacturing account shows a profit of Rs. 3,757-2-11 against Rs. 1,698-12-2 in 1887. The trades taught are carpentry, in which there is a profit of Rs. 2,274 against Rs. 1,445 the previous year, iron-work, shoe-making and tinwork.

13. The Lieutenant-Governor is glad to learn that the official visitors take much interest in the school, and that the work of both Dr. Moorhead, the Superintendent, and of Mr. Hill, the Deputy Superintendent, has been favourably noticed.

ORDER.—Ordered that a copy of the Resolution be forwarded to the President of the Board of Management of the Reformatory School at Alipore for information and communication to the Members of the Board.

Ordered also that a copy of the Reports and a copy of the Resolution be forwarded to the Inspector-General of Jails for information and communication to the Superintendent of the Hazaribagh Reformatory School.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

JOHN EDGAR,

Chief Secy. to the Government of Bengal.

RESOLUTION ON THE EMBANKMENT REPORTS FOR THE YEAR 1887-88.

No. 845*I.*

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

Irrigation.

Dated Calcutta, the 7th June 1889.

RESOLUTION.

READ—

The embankment reports for 1887-88.

The budget grant for the maintenance of embankments in Bengal for the year 1887-88 was—

			Rs.
Government embankments	...	...	5,39,728
Tuccavee embankments under contract	...	...	2,75,272
	Total	...	8,15,000

The expenditure during the year was as follows :—

			Rs.
Government embankments	... ...	...	5,95,519
Tuccavee embankments under contract	...	...	1,21,840
	Total	...	7,17,359

2. Since the commencement of the year 1887-88, the Government embankments hitherto classed as Imperial have, under the orders of the Government of India, been provincialized.

3. The accompanying statement shows the lengths of embankments in each civil division and district in Bengal other than Orissa. The D Schedule embankments are maintained at Government expense, and those classed as tuccavee are maintained at the cost of zemindars, either under contract for a fixed term of years, or under annual estimates for repairs. The expenditure on the latter is shown in the remarks column.

4. The total length of D Schedule embankments and the cost of maintaining the same, exclusive of charges for establishment and tools and plant during the year under review as compared with those of the previous year are shown below :—

Years.		Length.		Cost.
		Miles.	Feet.	Rs.
1887-88	... ...	1,127	387	2,54,129
1886-87	... ...	1,184	332	2,90,853

Thus in the length of D Schedule embankments there is altogether a decrease of 56 miles 5,225 feet, occurring chiefly in the Midnapore district, where about 53 miles of embankment in the charge of the Executive Engineer of the Balasore Division have been abandoned.

The decrease in the cost of maintenance is partly due to this decrease in length, but the average cost of maintenance per mile has also fallen from Rs. 245·47 in 1886-87 to Rs. 225·47 in 1887-88.

5. The embankments in the districts of Hooghly, Burdwan, and Midnapore suffered severely from the floods which took place in August 1887. In Midnapore the encroachments of the sea on the Hidgellee sea dyke necessitated the construction of a retired line one mile in length to that work. In the Moorshedabad district also, though the floods were not of unusual height, and no breaches took place, several retired lines were found necessary. In the Rajshahye district, where there are only 6 miles of embankment, the mileage rate of maintenance is as high as Rs 969. This high rate is due to the necessity of securing one of the embankments which protect the town of Rampore Beauleah by a retired line constructed in rear of the point threatened.

6. The embankments of the Burdwan estate, which are included in the list of embankments under Schedule D, were maintained at a cost of Rs. 91,156 against Rs. 1,31,164 in the year previous, a decrease of Rs. 40,008.

7. The length of tuccavee embankments under contract was the same as last year, viz., 478 miles 4,806 feet, but there was an increase in the cost of maintenance of Rs. 10,727 chiefly due to the remodelling of a portion of the Sarun main embankment and to the construction of some protective works and retired lines in the embankments of the Chumparun and Midnapore districts which were damaged by floods.

The average mileage rate is Rs. 178·46 against Rs. 156·06, or Rs. 22·40 more than that of the previous year.

By order of the Lieutenant-Governor of Bengal,

C. W. I. HARRISON, *Lieut.-Col.*, R.E.,

Offg. Joint-Secy. to the Govt. of Bengal,
P. W. Dept.

BURDWAN DIVN.			
1	Burdwan June 8, '89	1·08	Heat above normal. The rain has done good. Prices high and stationary.
2	Bankoora „ 8, '89	1·30	Weather—days hot and nights cool with strong winds. Cultivation of sugarcane and sowing of rice proceeding fairly. *Til* and cotton doing well. More rain wanted. Common rice 17½ seers per rupee at Bankoora and 17 seers at Bishenpore.
3	Birbhum „ 8, '89	0·49	Weather—hot and cloudy. No crops to report on. Ploughing going on everywhere. Price of rice remains steady at 13½ seers per rupee.
	Rampur Hât ...	0·95	
4	Midnapur „ 8, '89	1·32	One good shower of rain at head-quarters, but none at sub-divisions during the week. Weather hot and muggy. Ploughing going on and some sowing done. Rain required. Prices of rice nearly stationary. They are as follows:— Rs. A. P. Sudder ... ... 2 9 3 per maund. Contai ... ... 2 8 0 per maund. Tamluk ... ... 3 0 0 per maund. Ghatal ... ... 2 8 0 per maund.
5	Hooghly „ 8, '89	1·05	Weather—hot with occasional wind and rainstorms; rain where it falls is inadequate; indications of heavy rain result in showers. Rain, except in the Jehanabad sub-division, has done good, but more is wanted. Much land has been prepared for rice. Sugarcane has suffered. Prospects of hemp, jute and *aus* rice bad, though where rain has fallen improvement is reported. Price of coarse rice at Sudder and Serampore 12 seers per rupee and at Jehanabad 16 seers.
	Serampore ...	1·60	
	Howrah „ 10, '89	1·53	Weather—moist and warm. More rain wanted. Sugarcane is languishing. Jute and *amun* are being sown. Common rice 12 seers per rupee at Sudder.
	Central Districts.		
PRESIDENCY DIVN.			
6	24-Perghs. June 11, '89	0·35	Weather—very hot and occasionally cloudy. Prospects further improved by the rain of the week. The recently sown rice is beginning to germinate in some parts. The price of rice remains steady at an average of about 13 seers per rupee.
7	Nuddea „ 8, '89	0·61	Weather—seasonable. Rain has done some good to *aus*, jute, indigo and sugarcane. Sowing of *aus* paddy nearly finished. Rain still wanted. A heavy storm has just passed over the station.
	Kooshtea ...	0·62	
	Meherpur ...	0·08	
	Chooadanga ...	0·60	
	Ranaghat ...	0·48	
8	Khoolna „ 8, '89	1·28	Weather—hot. The rainfall of this week has done much good to the standing crops, viz., jute and sugarcane. Sowing of *amun* and *aus* is going on. Lands are being ploughed for transplantation of *amun* seedlings. Prospects somewhat improved.
	Bagirhat ...	1·77	
	Sutkhira ...	0·67	
9	Jessore „ 8, '89	4·05	Weather—very hot with occasional wind and rain. The rain which fell during the latter part of the week has done much good to the crops. Price of rice stationary.
	Jhenidah ...	0·89	
	Magura ...	4·74	
	Narail ...	0·30	
	Bongong ...	0·49	
10	Moorshedabad „ 8, '89	0·52	Weather—hot and close, generally south wind. Fourteen annas of the usual area in the Sudder sub-division has been sown with *aus dhan*. More rain needed in Jungipore.
	Lalbagh ...	0·35	
	Jungipore ...	0·38	
	Kandi ...	1·35	
RAJSHAHYE DIVN.			
11	Dinagepur „ 8, '89	4·03	Weather—cooler with frequent showers. The rain will improve the prospects of the *bhadoi* crop, but has come almost too late for the jute. *Haimanti* rice is being sown in places.
	Thakurgaon ...	5·75	
12	Rajshahye „ 8, '89	2·27	Weather—cloudy; not quite so hot; high winds. Rain has done much good, but has been insufficient in north. Sowing of jute, *til*, *aus* and *amun* going on. Owing to lateness of rain, jute sowings not yet completed, and cannot therefore be estimated. Price of rice averages 13½ seers per rupee.
	Nattore ...	0 28	
	Nowgong ...	0·43	
13	Rungpore „ 8, '89	10·56	The rains have broken, and thunderstorm with high winds and heavy rainfall occur at frequent intervals. *Aus* paddy is fast ripening. It will give a poor return generally. *Amun*, jute and sugarcane are flourishing under the influence of the heavy rainfall. Prices rising slowly.
	Gaibanda ..	5·27	
	Kurigram ...	6·65	
	Nilphamari ...	3·55	
14	Bogra „ 8, '89	3 82	Weather—damp, with occasional heavy showers. Temperature very variable. Generally cloudy. The rain has done good, but it was far too long in coming. The *aus* crop has suffered considerable permanent injury. Price of rice still high: 14½ seers per rupee.
	Sherpore ...	1·18	
	Nowkhilla ...	3·31	
15	Pubna „ 8, '89	1·70	Weather—cloudy, with occasional showers. Owing to fairly general rain, prospects of *aus* and *amun* and of jute and sugarcane are much improved. An average crop of jute may be expected in the Serajgunj sub-division and 12 annas in the Sudder sub-division. Coarse rice sells at 14 seers per rupee.
16	Darjeeling „ 8, '89	4·85	Rain throughout the district during the week. Crops doing well. Sowings of *bhadoi* and jute nearly finished in Terai. Lands are being prepared for *haimanti* rice.
17	Julpigoree „ 8, '89	4·53	Weather—seasonable. Prospects of crops generally good. The rainfall of this week will help the cultivators to prepare land for *haimanti* rice. Cattle disease is rather prevalent in some places. Prices stationary.
	Eastern Districts.		
DACCA DIVN.			
18	Dacca June 8, '89	5·98	Weather—hot and mostly cloudy. A tornado passed over the town of Narain-gunge on the 5th instant. Sowing of paddy crops completed. Jute and paddy sown are coming up well. No special change in the prices of food-grains. Fodder available.
19	Furreedpur „ 8, '89	5·45	Weather—cloudy and cool. Heavy rain on 4th and 5th has been beneficial, but good outturn of rice cannot be expected owing to late sowings. Prospects of jute not very good. Average price of common rice 11½ seers per rupee.
20	Backergunge „ 8, '89	1·21	Weather—very hot. Prospects of crops fair. *Aus* is suffering from want of sufficient rain.
21	Mymensingh „ 8, '89	5·45	Weather—hot and rainy. Heavy rain on the 6th. Prospects of crops continue good.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
		Eastern Districts—concld.		
Chittagong Divn.	22	Chittagong ...	......	Report not received.
	23	Noakholly „ 8, '89	5·73	Weather—warm and cloudy with frequent thunder showers. The late rain has done good to the *aus* plants. The extent of sowing of *amun* crops to date is reported to be 15 annas on low lands and 8 annas on high lands.
	24	Tipperah „ 8, '89	7·79	Heavy rain in the afternoons. Weather hot and close between rain. Prospects of crops good. Jute growing vigorously.
	25	Chittagong Hill Tracts. „ 7, 86	2·07	Weather—excessively hot. A shower of rain on the 4th. Rain badly wanted for *jum* crops.
		Hill Tipperah June 8, '89	4·57	Weather—hot. Prospects of crops good. Rice market stationary—14 seers a rupee.
BEHAR.				
Patna Divn.	26	Patna June 8, '89	Nil	Weather—hot with east winds. *Cheena* is still being reaped. Lands are everywhere being prepared for *bhadoi* crops. More rain is much wanted. Prices of food-grains almost stationary.
		Behar ...	0·85	
		Dinapur ...	0·20	
	27	Gya „ 8, '89	Nil	Weather—very hot with high winds. Sugarcane doing well. Lands are being ploughed in some places. Rain wanted for *makai* and *marwa* sowings.
	28	Shahabad „ 8, '89	0·28	Temperature fairly low, but great heat. East winds prevailing. Ground is being prepared for *bhadoi* crop. Sugarcane doing well, but some damage anticipated in parts of Sasseram from recent storm. Prices stationary. Markets well supplied.
		Sasseram ...	·33	
	29	Durbhunga „ 8, '89	Nil	Weather—very hot with high east winds and passing clouds. Rain holds off, and the drought has been proving injurious to *marwa, dhan* and *cheena*. It has also retarded the progress of agricultural operations. Indigo is fair. Common rice is selling on an average at 12 seers to the rupee.
	30	Mozuffurpur „ 8, '89	0·07	Weather—Strong easterly winds. Cloudy in mornings. Occasional storms, but little rain. Rain urgently wanted. Where it has fallen, it has facilitated preparation of lands and sowings. In Hajipur indigo is generally good, though in places two annas has been injured by drought. In the Sudder and Sitamarhi sub-divisions indigo has suffered a good deal from drought, but may revive to some extent with good rain. Rice sown in low lands is also suffering.
		Hajipur ...	0·27	
		Sitamarhi ...	0·61	
	31	Sarun „ 8, '89	0 20	Weather—hot and seasonable. Local storms of dust and heavy rain. *Cheena* and indigo doing well. Sowing of *bhadoi* has commenced.
	32	Chumparun „ 8, '89	0·12	Weather—hot; occasionally cloudy. Rain is badly wanted all over the district. Sowings are retarded. Indigo has suffered from drought. Prices have fallen slightly, but not in the affected tract. A good shower of rain reported in the north-eastern corner of the affected area.
Bhagulpore Divn.	33	Monghyr „ 8, '89	0·31	Weather—hot and sultry with strong east winds and occasional clouds. The rain has done much good to the standing *cheena* crop and has facilitated *bhadoi* sowings. More rain urgently wanted. Prices of food-grains stationary.
		Beguserai ...	0 64	
		Jamooe ...	1·22	
	34	Bhagulpur „ 8, '89	0·49	Weather—hot with strong east winds. Clouds gather and disperse without rain. Prospects fair in the south. The reports from the northern sub-divisions show that up to the 5th instant the continued drought was drying the sowings made on recent rain and retarding all operations. On the 8th heavy rain reported from the north-eastern pergunnahs, which, if general, should mend matters. Prices steady in south, rising in north.
		Banka ...	0·10	
	35	Purneah „ 8, '89	0·01	Weather—cloudy, but rain keeps off most unaccountably; very sultry at times. Crops are generally suffering from insufficient rain, though in places they look well. Not more than an eight-anna *bhadoi* crop all round can be reaped.
		Kissengunge ...	2·78	
		Arrareah ...	0·68	
	36	Maldah „ 8, '89	0·29	Hot muggy weather, interrupted by storms of wind ending in a few drops of rain. Heat at times intolerable. Harvesting of *boro* nearly over. *Bhadoi* sowings not yet complete. Lands are being prepared for late rice, but could not be sown for want of sufficient rain. Indigo benefitted slightly by rain. Jute plants are being damaged by insects at Tulsihata. Rain urgently wanted. Price of rice has risen to 12 and 12½ seers a rupee at Ratua and Shibgunge respectively. In other places it is nearly the same as in the last week.
		Shibgunge ...	0 09	
		Gajole ...	0·49	
	37	Sonthal Perghs. „ 8, '89	0·16	Weather—very hot and sultry; slight rain in the evening of the 6th, cloudy off and on since. Paddy sowings are much retarded for want of rain, and the paddy seedlings and sugarcane are suffering. Prices stationary, but very high. Increase of people employed on the Godda test relief-works, but a large falling off in the number employed on the Jamtara works.
		Pakour ...	0 06	
		Rajmehal ...	0·01	
		Godda ...	0·03	
ORISSA.				
Orissa Divn.	38	Cuttack June 8, '89	0·78	Weather—very hot; evenings cloudy Sowing going on. More rain wanted for ploughing operations. There was a shower of rain on the 4th at Jajipur. Price of rice rising gradually.
	39	Pooree „ 7, '89	Nil	Weather—hot and cloudy. Sowing of *sarad* crop going on. More rain wanted. Price of common rice varies from 14 seers 7 chittacks to 18 seers 7 chittacks per rupee in the Sudder sub-division and from 11 seers 13 chittacks to 15 seers per rupee in the Khoorda sub-division.
	40	Balasore „ 8, '89	Nil	Weather—again getting hot. Lands are still being cultivated and sowings are general. More rain wanted, especially in the north of the district.

	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
CHOTA NAGPORE.					
South-West Frontier Agency.					
CHOTA NAGPORE DIVN.	41	Hazaribagh	June 8, '89	0·34	Weather—excessively hot. Cloudy on and off for the last two or three days. Sowings of rice, *goondli* and *marwa* commenced in parts of the district. Rain wanted for the seedlings. Prospects of sugarcane have improved where rain has fallen. Scarcity of water felt in many places.
	42	Lohardugga	„ 8, '89	0·02	Weather—very hot and cloudy. Slight rain. Sowing of *gora dhan* is almost completed. Prices steady.
	43	Singbhoom	„ 8, 89	1·70	Weather—stormy at intervals with high wind and rain. Temperature lower. Ploughing and sowing of rice crop in active progress. Prices stationary.
	44	Manbhoom	„ 8, '89	0·89	Weather—very hot. Slight rain here and there during the week, but more is wanted. Paddy is being sown, and sugarcane is growing.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, DURING THE MONTH OF MAY 1889.

The normal meteorological conditions in Bengal during May are to a considerable extent similar to those of April. There is the steady and increasing difference of temperature between the land and the sea area, and in this month this difference attains almost its maximum. The area of maximum temperature during May includes the western districts of South Behar, the North-West Provinces, Rajputana, and Central India. With the increasing temperature of the land surface, the southerly winds blowing from the Bay of Bengal strengthen considerably, and owing to the physical obstacles of the hill systems to the east and north of Bengal, they appear as south-easterly winds in East Bengal, and as easterly winds in North Bengal. At the same time, however, the usual hot, dry westerly winds are blowing over considerable portions of Behar and Chutia Nagpur, and thus during May, as explained in previous monthly reports, conditions are favourable to the production of the local storms called nor'-westers. These, it is probable, are produced by the action of the opposing winds in elevating the moist sea breezes, and by this ascensional motion their water vapour is condensed, and sufficient energy is at the same time liberated to produce the well-known effects of these storms.

The southerly breezes which blow during this month at the head of the Bay are of considerable strength, and in fact at Saugor Island and False Point the wind velocities measured in May are generally greater than those during the actual rainy season, but there is reason to believe that during May the current is of small depth compared to what it is during the actual monsoon period. These winds, however, carry considerable amounts of moisture into East and North Bengal, and in the neighbourhood of the hills ascensional movement takes place, followed frequently by local storms and by heavy rainfall. This action will account for the large rainfall which occurs during this month in the northern and eastern districts of the province.

During May the distribution of the normal rainfall is simple, and the lines of equal rainfall run nearly north and south through the province, or rather almost parallel to a line joining the Chittagong Hill Tracts, the Tipperah Hills, the Garo Hills, and the Darjeeling Hills, the largest amounts being received in the eastern and northern districts, and the smallest amounts in the western districts. Thus the average rainfall of the month is less than 2 inches in the southern parts of the Sarun and Mozufferpore districts, the Gya and Shahabad districts, and the western parts of Chutia Nagpur. To the east of these districts, up to a line running nearly north from the mouth of the Hooghly, the rainfall increases from 2 up to 5 inches. To the east of this, up to a line passing through Rungpore, Jamalpore, Mymensing, Bramunboriah, Comilla, and Cox's Bazar, the average rainfall increases eastwards from 5 to 10 inches. To the east of that line it exceeds 10 inches, and increases rapidly in amount towards the Garo and Khasia Hills and towards the Dooars, and at Buxa, in the Western Dooars, the average rainfall in May is not less than 20·77 inches

The meteorology of May is generally rather important, for about the second or third week the south-west monsoon makes its appearance in the south of the Bay, and gives heavy rain and fairly strong winds at the South Ceylon stations. The monsoon current gradually creeps up the east of the Bay, and rain sets in along the Arakan coast towards the close of the month, and it afterwards spreads into East and North Bengal early in June.

In the front of the advancing monsoon current frequently cyclonic storms arise, which are sometimes small and feeble, and at other times larger and of considerable intensity. When these cyclonic storms are formed quite in the south of the Bay, they usually advance towards the Madras coast; but when the storms originate rather later, that is, when the monsoon current has advanced well into the centre of the Bay, the storms which then form appear usually to advance either towards the Arakan coast, or towards the South Bengal coast.

Meteorology of the month.—The principal features of interest in the meteorology of the past month have been —

1. The mean barometric pressure for the month has been in slight defect of the normal along a line running almost north and south through the centre of the province starting from Jessore, while on either side of this band the mean pressure has been in excess of the normal, the excess being largest at such stations as Saugor Island and Cuttack on the one side and Chittagong on the other, where the variations equal about 0·03 inch. The mean pressure over the whole province has therefore been not very far removed from the normal, and an excess pressure of only 0·01 inch is recorded. In Assam the mean pressure has been only seven thousandths of an inch in excess of the normal.

2. The temperature during certain parts of the month has been very largely in excess of the normal, and for the whole month the average temperature of the province has been no less than 3·2° in excess of the normal. The excess has been smallest in Orissa and

East Bengal, where it only equals about 2°, while in North Behar and Chutia Nagpur it exceeds 4°. In Assam, on the other hand, temperature has on the average been below the normal, and a general defect of 0·5° is recorded.

3. Rainfall has been very largely in defect of the normal in all the meteorological districts of Bengal and Behar, and indeed the general rainfall of the whole province does not average more than about 55 per cent. of the normal, and the largest rainfall in any division has been about six inches in East Bengal. On the other hand, particularly heavy rain has fallen in Assam, where Silchar has received nearly 29 inches in the month and Sibsagar nearly 24 inches.

4. The periods of disturbed conditions due to the formation of nor'-westers were few. In East Bengal some local storms with rain occurred in the first few days of the month, but the disturbance did not extend to other districts. A more general period of disturbance occurred in the middle of the month, and rain fell on one or more days between the 14th and 17th at almost all stations in the province except in Behar and Chutia Nagpur. A further and more extensive series of disturbances commenced about the 20th, and from this date up to the 26th rain showers were numerous in all districts over the whole province In the hills to the north of Bengal, conditions appear to have been disturbed for the greater part of the month, and at some stations rain has fallen almost daily

5. In the south of the Bay no strong advance of monsoon winds was noticed until about the 19th of the month, when from that date up to the 23rd rather strong winds prevailed at Galle. The advance certainly progressed as far as the centre of the Bay, and on the 22nd a cyclonic whirl commenced to form near the Andamans, and the ships navigating that part of the Bay reported on this day rather squally unsettled weather. The small whirl, however, had no time to develop into a storm, as it passed inland over the Gulf of Martaban during the same night, giving only very moderate winds, but it appears to have initiated the rainy season in the south of Burma. From the 23rd to nearly the end of the month the monsoon winds blowing in the south of the Bay were only of moderate force except on the 26th and 31st, but on the latter date a second and very much stronger advance of monsoon winds made itself felt at the Ceylon stations.

At the commencement of May, ordinary hot weather conditions generally obtained in the province of Bengal, though temperature was exceptionally high. Owing perhaps also to this exceptionally high temperature which would indicate that the differences between the temperature over the sea and land must have been decidedly larger than usual, exceptionally strong southerly winds were blowing from the sea over the head of the Bay. Winds, though thus much stronger than usual, were of almost normal directions. Rainfall at this time was entirely absent except at a few stations in East and North Bengal. These conditions remained practically unaltered for the first ten or twelve days of the month, but from the 10th to the 12th a feeble barometric depression gradually formed over the west of the province, which was attended by a feeble cyclonic circulation of winds. This feeble depression apparently was connected with a shallow general low-pressure area which was formed over Bengal about the 14th, after which a series of local storms occurred in all districts except Behar and Chutia Nagpur, the disturbed conditions lasting from one to about three days in different districts Normal hot weather conditions then set in for a few days, but on the 21st a series of very irregular barometric changes occurred, which was again followed by disturbed weather, and for several days local storms with rain were numerous in all districts of the province In this instance, hovever, these storms do not appear to have followed the formation of any area of barometric depression, for they simply followed and were attended by a series of rather large and decidedly irregular changes of the barometer. Thus for the greater part of the month fairly normal hot weather conditions prevailed over the province. In the Bay also the meteorological conditions have been fairly normal. but the two strong advances of monsoon winds, which, as stated above, took place from the 19th to the 23rd, and again quite at the close of the month, have not progressed so far up the Bay to in any way influence the weather in Bengal in May. So far, then, as can be judged, conditions are fairly normal for the period, and it would appear probable that the monsoon rains will commence in Bengal at about the ordinary date

Pressure—At the commencement of the month was generally decidedly below the normal, the defects being smallest in the western and southern districts and largest in the north of the province, where an average defect of about a tenth of an inch was indeed recorded at many stations. During the second week pressure became above the normal, but the relative defect in the north of the province still remained a prominent feature. In the third week pressure became more normal, and while the southern stations showed an excess of 0·04 inch, at the northern stations there was a defect of 0·01 inch. For the fourth week in the month also the average pressure in the province was not very far removed from the normal; so that, taking all the readings for the month into consideration, the mean pressure at most stations has been very nearly normal, and the maximum variation from the normal is an excess of about 0·03 inch at Cuttack and Saugor Island; while on the other hand a defect of 0·014 inch is recorded at Berhampore, and one of 0·019 at Beauleah. Pressure has therefore been in defect in the centre of the province and in excess in the western and eastern districts. For the whole province the mean pressure has been about 0·01 inch in excess of the normal. In Assam,

Silchar records an excess pressure of 0·022 inch, and Sibsagar one of 0·009 inch, while at Dhubri pressure has been in defect by 0·008 inch, thus showing that there has been a mean excess pressure of 0 007 inch in Assam.

Temperature.—The main feature of interest in the temperature of May has been the extraordinarily high mean temperature recorded at many stations during the first half of the month, when temperatures of from 10° to 15° in excess of the normal mean were registered at many stations This large excess was perhaps more noticeable in the night or minimum rather than in the day or maximum temperatures For the whole province an excess of no less than 3·4° over the normal mean temperature has been recorded. while in Chutia Nagpur the excess is no less than 4·4°. The highest recorded maximum temperatures during the month have been 115 5° at Raneegunge, 115·1° at Bankoorah, 114 6° at Gya, and 114·5° at Dehroo. In Assam the mean temperature has been 0 5° below the normal for the month.

Rainfall.—As has been previously stated, rainfall has been decidedly scanty throughout the province for the month. East Bengal has received the largest amount, and averages a fall of 6·19 inches, or about three inches less than the normal. North Bengal, South-West Bengal and Orissa have each received an average amount of about three inches, while Behar and Chutia Nagpur have only received falls varying from an inch to an inch and a half. Comparing the actual average rainfalls in each district with the normal falls for May, and expressing them as a percentage of these, the following numbers are obtained :—Orissa 76 per cent, East Bengal 67 per cent., South Behar 58 per cent., South-West Bengal 55 per cent., Chutia Nagpur 46 per cent., North Behar 43 per cent., and North Bengal 40 per cent Taking these districts as having an equal value in the calculation, the rainfall over the whole of Bengal during May was equal to 55 per cent. only of the normal fall.

Taking up the rainfall rather more in detail, it must be first stated that the amounts recorded in neighbouring districts vary very largely Thus while the Dinagepur district has received an average of 0·73 inch, or about a tenth of its usual fall, in the Pubna district, only a short distance to the south-east, an average fall of 5·94 inches is recorded, which is about five-sixths the usual fall for May. The same fact also is even more strikingly noticeable when the falls at neighbouring stations are compared. With these large variations it is impossible to give any general short description of the distribution of the rainfall except to say that the falls have been heaviest in the Darjiling Hills districts and in the eastern districts of East Bengal, where in some cases falls of from 10 to 15 inches are recorded, and the falls have been smallest in the extreme western districts of the province, where an average fall of only about a third of an inch is recorded. At some stations, such as Pupri in the Mozufferpore district, Mohania in the Shahabad district, and Ramghur in the Hazaribagh district, no rain at all appears to have fallen.

The variations of the actual falls from the normals also show very large differences, and while the province on the whole has received only about half the normal fall for the month, there are yet some areas where excess falls have been registered. The principal areas where a rainfall above the normal has thus been registered are—first, one in East Bengal represented by such stations as Naraingunge, Atia, and Goalundo and Serajgunge in North Bengal; a second area a little to the west of the centre of the province, and represented by such stations as Berhampore, Kandi, Lalbagh, Soory, Hetampur, Rampore Haut, Raneegunge, Bankoorah, Nya Doomka and Godda; a third small area in Behar represented by the stations Patna, Barrh, Begooserai; and another in Orissa represented by the stations Cuttack, Jajpore, Bhuddruck and Sorah. The remainder of the province is in defect, and the defect over a considerable area of the eastern half of the province exceeds five inches of rainfall. This is the case over a considerable part of the Furreedpur and part of the Tipperah district, and over considerable parts of the Bogra, Dinagepur and Rungpore districts. Indeed the districts in which the defective rainfall in the month has been most pronounced have been Dinagepur, Khoolna, Maldah and Gya, where the rainfalls are less than 20 per cent. of the normal amounts, and in Bogra, Rajshahye, Rungpore, North Bhagulpore, Shahabad, Chumparun, Mozufferpore, Hooghly, Nuddea and Jessore, where the falls are less than 40 per cent. of the normal.

The following table gives full data for the comparison of the actual and the normal rainfall of the month of May in all districts of the province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance or weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third column in a slightly different form. It states as a percentage

how much the district rainfall of the month varied in excess or defect from the normal rainfall, and is hence the difference between the numbers in the third column and 100 :—

Percentage Table for May 1889.

Division.	District.	Normal district rainfall for May.	Actual district rainfall for May 1889	Percentage of actual to normal rainfall.	Percentage excess (+), deficit (−).

* Mean of 6 days.

Explanation—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten years.

The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 21 stations in the district sending in returns divided by the number of stations. A rainy days is one on which at least hundredth of an inch fell.

for the week ending Friday, the 7th of June 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. — RAINFALL. — Of week. — Mean for district.	Of week. — Normal mean. Explanation.—Indicates that rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 11*th June* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, DURING THE WEEK ENDING 7TH JUNE, 1889.

THE chief features of the meteorology of the week have been the rather large differences of pressure over the province; the high temperature and humidity, the latter in all districts, the former in all except North Bengal and Assam, where it was generally in defect; and the copious rainfall in Assam, East Bengal and parts of North Bengal. The weather during the latter half of the week has been of the character of that which usually precedes the commencement of the rains. Pressure has generally been high. At the beginning of the week there was defect in Behar, but elsewhere excess, large at some stations of South-West Bengal and Orissa. In consequence of the increased difference of pressure the wind force increased, and very strong winds were blowing at the head of the Bay. Weather continued fine in all districts except Assam and North Bengal for the first two days of the week, after which conditions became somewhat unsettled, especially on Tuesday, when local storms became common in South and East Bengal. Temperature during these days was high everywhere except in Assam, where there was a defect of from 3° to 5,° and in North Bengal, where it differred very little from the normal The very large excess which existed in Behar remained unchanged for a day or two, but afterwards began to diminish, and from about 10° at the beginning of the week was reduced to 6° on Tuesday. From Monday till Wednesday winds showed a slight cyclonic circulation in the western districts, but as the difference of pressure between the southern districts and Behar had by that time begun to lessen, the winds fell off and continued diminishing till the end of the week. During the last two days pressure continued high, but was fairly uniform. Large differences existed in temperature, which varied from 5° below the normal in the eastern districts to 5° above in part of Behar. Humidity continued high except at some of the western stations, and cloud proportion was generally rather high; rain was fairly general in Bengal and Assam, especially in East Bengal. Heavy rain fell in Assam during the greater part of the week, falling off towards the end, when temperature began to rise, and by the end of the week it had become very nearly normal.

Pressure—Has been high in all districts during the greater part of the week On Monday after a rather heavy fall there was defect everywhere, and for the first four days of the week pressure was below the normal in Behar. With these exceptions there has been excess. Considerable difference appeared between the pressures in the southern districts and Behar, but this diminished gradually, and by the middle of the week greater uniformity existed. The changes during the week have not been large, and except on Monday and Friday, pressure rose by small amounts. With the exception of the fall on Monday, no large general change took place The average fall on Tuesday amounted to about ·07," on other days the average variation did not amount to a twentieth of an inch. Pressure in Assam has been in excess all through the week, exceeding a tenth of an inch on Thursday. Average pressure shows excess everywhere except at a few stations in Behar, and is largest at the Assam and East Bengal stations, the average in Assam being about ·06", and in East Bengal about 05". Elsewhere the excess lies between ·02" and ·05". In South Behar average pressure is very nearly normal.

Temperature.—At all stations, except those in Assam and a few in North Bengal, temperature has been in excess; at some stations of Behar the excess amounted to more than 8,° and at some in South-West Bengal also has been large, in one case exceeding 6°. Temperature was very high in the early part of the week, and though it continued very high at some stations in Behar and South-West Bengal, it was falling by small amounts, especially in North and East Bengal. By the middle of the week there was a rather large defect in North Bengal, and the excess at other stations had considerably diminished. The fall became more rapid towards the end of the week in East Bengal, and on Thursday there was a defect of about 5° at the eastern stations, and excess of about the same amount at the others. Many stations continued to record maximum temperatures of over 100° throughout the week, and in the early part of the week several were over 110.° The highest was at 115·5° at Dehree on Saturday and Sunday. In Assam temperature was generally very low, but it was increasing towards the end of the week. Except in Assam and North Bengal, the mean temperature for the week has been in excess in all districts. The largest excess has been 8° in Chutia Nagpur; in South-West Bengal and South Behar it has been a little over 4°; in North Behar 3·6°; in the other districts about 2.° In North Bengal the mean temperature is normal, and there has been a defect of over 3° in Assam.

Rainfall.—The largest rainfall has been in Assam, East and North Bengal. In other districts the amount has been considerably below the normal, especially South-West Bengal, where about half the normal amount has fallen. Heavy rain fell in Assam during the greater part of the week, diminishing towards the end. At first is was confined to Assam, but a few showers fell in North and East Bengal on Sunday, and on Monday heavy rain commenced to fall in North Bengal. On Tuesday and Wednesday moderate rain continued in the eastern districts, and a series of local storms passed over South Bengal. Heavy rain was confined to East Bengal on Thursday, and on the last day of the week rain continued in the eastern districts, but was heavy at only one or two stations. In North and East Bengal about 4 inches have fallen. In all other districts except South-West Bengal, where a little over an inch has fallen, there has been less than half an inch. The largest defect was in South-West Bengal and Orissa.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 7th of June 1889:—

Meteorological Divisions.	Temperature: Highest observed during week.	Lowest observed during week.	Averages for week: Of highest of each day.	Of lowest of each day.	Of mean for each day.	Average mean of week above or below normal mean of week.	Rainfall: Of week: Average.	Normal average.	Variation.	Rainy days: Average number in week.	Normal average number in week.	Variation.	Since 1st of month: Average.	Normal average.	Since 15th May 1889: Average.	Normal average.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, p passing temporary showers, t thunder, < lighting, w strong wind, lr. lighting reflection, K thunderstorm.

A. PEDLER,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 10th June 1889.

MEMORANDUM.

THE birth and death returns of the principal Municipalities in Bengal exhibit the following results for the week ending 25th May 1889 :—

1. Births and deaths were registered in these Municipalities in the proportions per 1,000 of population of 16·6 and 20·9, respectively, as opposed to 17· and 20· per 1,000 during the preceding week ending 18th May

2. These events were recorded in the highest proportions in the following Municipalities :—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Durbhanga	44·8	Puri	50·4
Utterpara	37·7	Santipore	38·5
Hughli	30·9	Serampore	37 3
Serampore	29·4	Durbhanga	37·0
		Gya	36·9

3. The diseases specified in the table appended to this memorandum furnish the death-rates exhibited below, in contrast with the results of the preceding week :—

	Ratio per *mille* during the weeks ending— 25th May 1889.	18th May 1889.
Cholera	2·7	2·9
Small-pox	·6	·4
Fever	8·5	7·1
Bowel-complaints	2·7	2·4
Injury	·8	·6
Other causes	5·6	6·6

indicating chiefly that there was an increase of mortality from fever with a decrease in that from the maladies coming under the head of " Other causes "

4. Of the diseases above indicated, small-pox was noticeably severe in Patna Town, attended with 6 deaths (mortality 1·9 per 1,000 of population), and bowel-complaints prevalent in Puri Municipality (mortality 10·5 per 1,000 of population), while cholera and " Other causes " gave rise to the highest mortality in the following Municipalities :—

Cholera.	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Puri	18·9	Serampore	13·7
Comillah	11·6	Bhagulpore	11 8
Serampore	7·9	Gya	11·6
Santipore	7·0	Bali	10·5
Patna	4·5	Puri	10 5
Howrah	2 9	Durbhanga	10·2
Gya	2 7		

5. Under the heads of *Sex*, *Class* and *Age*, the mortality stood as follows : —

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	23 3	Christians	46·0	Under 1 year ...	172·9
Females	18·4	Hindus	21·1	1 and under 5 years ...	41·1
Ratio of male deaths to every 100 female deaths	136	Mahomedans ...	19·9	5 " 10 " ...	11·2
		Other classes ...	76 8	10 " 15 " ...	11·3
				15 " 20 " ...	15 3
				20 " 30 " ...	9 8
				30 " 40 " ...	7 9
				40 " 50 " ...	18·1
				50 " 60 " ...	22·6
				60 years and upwards ...	45·5

W. H. GREGG, *Dip. Publ. Health, Camb.,*
Sanitary Commissioner for Bengal.

The 10*th June* 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

General remarks on the fluctuation of principal staples carried over the East Indian Railway during month ended 27th April 1889.

INCREASES.

Coal and coke.—There was a decrease in the upward and an increase in the downward traffic; the former was due to a limited demand from foreign railways and up-country mills, and the latter to increased despatches for shipment and to the Eastern Bengal State and Port Trust railways.

Cotton.—Chiefly due to despatches from Etawah, Agra, Aligarh, and Khurjah to Howrah, owing to a better demand in the Calcutta market.

Gunny.—Principally in despatches from Howrah, Serampore, Bhadreswar and *viâ* Naihati to Panjab, Oudh and the North-Western Provinces for the new season's crops.

Wheat.—Chiefly in despatches from the Oudh and Rohilkhund Railway *viâ* Moghalsarai and from *viâ* Ghaziabad, Delhi, Khurja, Aligarh, and other distant stations to Howrah for export.

Gram and pulses—

Other rain and spring crops.—The increase under these heads was due to large quantities being sent from Delhi and Cawnpore to Howrah and Bombay for local consumption.

Government stores.—Chiefly in ordnance stores from Howrah to *viâ* Ghaziabad for Rawalpindi, Meerut and Quetta.

Brass and copper.—Due to decline in the price of these metals in the Calcutta market; larger quantities were sent to Mirzapur and other trade centres in the North-Western Provinces.

Railway material, Foreign.—Due to larger despatches of permanent-way material from Howrah to Asansole and Umaria for the Bengal Nagpore Railway, and of railway material for the Indian Midland Railway from Manikpore to Jhansi.

Stone.—This is a continuation of the increase reported in previous months.

Sugar refined and unrefined.—Chiefly in Jaggree from Arrah to Howrah and Bombay, and in Sugar from Buxar and Behea to Agra and stations on the Great Indian Peninsula and Bombay, Baroda and Central India Railways. From Delhi and adjacent stations where the crop was good and prices low, supplies were sent to Agra, Etawah, Firozabad and other stations.

Tobacco.—There was a decrease in weight attended with an increase in earnings, and this was due to lesser quantities being sent longer distances than last year.

DECREASES.

Piece-goods, European.—This was chiefly in the despatches from Howrah, and Bombay *viâ* Jubbulpore.

Other fibres, raw.—Chiefly in hemp from Allahabad, for which there was a considerable demand last year in Calcutta and Bombay.

Rice (husked and unhusked).—There was an increase in weight carried but a decrease in earnings, and this was due to larger despatches to Calcutta from short distance stations.

Iron.—Due to the Calcutta market being dull throughout the month.

Opium.—Chiefly in the despatches from Patna, the traffic being controlled by Government.

Salt.—There was an increase in weight but a decrease in earnings.

Saltpetre.—Principally in receipts *viâ* Mokameh Ghât.

Seeds.—Chiefly in linseed, and was due to inferior crops, a limited demand in Europe, and sea freights being unusually high early in the month.

Spices.—In chillies from Mokameh and Mokameh Ghât.

N. ST. L. CARTER, *Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, *5th June* 1889.

Increases.

	Tons
Coal	464
For railway and flotilla purposes.	
Oilseeds	607
Increased despatches from Benapol, Gobardanga, Chandpara, Bongong, Singhia and Khoolna, and an improving demand in Calcutta.	
Salt	122
This includes a very small proportion of hide salt.	
Sugar	634
More than half this increase was contributed by Jhikargachi.	

Decreases.

Rice	353
The decrease is exclusively from Khoolna, due chiefly to bad crops in the district and to direct carriage to Calcutta by river.	
Betelnuts	514
The railway has lost the traffic in betelnuts, which now find their way into Calcutta by the Bengal Central Flotilla's direct steamers.	

CALCUTTA, *the 4th June* 1889.

F. P. QUINLAN, *Examiner of Accounts.*

Weekly Return of Traffic Receipts on Indian Railways.

G. W. Riely, Esq., Mayor of Blenheim.
A. H. Ross, Esq., M.H.R.
D. M. Ross, Esq., Mayor of Timaru.
J. B. Roy, Esq, Mayor of New Plymouth.
John Sharpe, Esq, Mayor of Nelson,
G. H. Swan, Esq., Mayor of Napier.
J. White, Esq.

Treasurer :

A. Bartleman, Esq.

Secretary :

D. Harris Hastings.

OFFICIAL PROGRAMME.

It is intended to celebrate the Fiftieth Anniversary of the Foundation of the Colony of New Zealand, by holding in the City of Dunedin an Exhibition of arts, industries, resources, and manners of New Zealand, Australia, and the other Countries and Colonies in the Southern Pacific

The principal objects of this Exhibition are to practically illustrate the development of the resources of New Zealand during the first half century of her existence, in comparison with the progress made by other Colonies, British and Foreign; to stimulate industry and promote Intercolonial commerce; to strengthen the natural ties which connect all the Countries in the South Pacific Ocean, and to call attention to their position and potentialities.

The recent improvement in the commercial condition of New Zealand, and the prospect of prosperity immediately before her, offers special opportunities for the development of industry and the extension of Intercolonial commerce; whilst many considerations point to the desirability of bringing the importance of the South Sea Islands into notice, and cultivating a closer acquaintance with their peoples.

The Exhibition is held by, and at the risk of, a number of New Zealand colonists, who have subscribed a Guarantee Fund for the purpose, after the model of those upon which the Great Exhibition of 1851, the London International Exhibition of 1862, and the Adelaide Jubilee Exhibition of 1887 were carried out.

The Government of New Zealand have recognised this Exhibition as the Official Celebration of the Jubilee of the Colony, and issued invitations to the Governments of Australia and the other Colonies and Islands in the Southern Pacific to be officially represented thereat. They have further undertaken to assist the Exhibition by erecting the main building, which will contain the picture galleries, and themselves exhibiting collections illustrating the fauna, flora, geology, and mineralogy of New Zealand, as well as objects of historical interest. The Government will also, with the assistance of the native chiefs, organise a representation of Maori life and customs.

The Commissioners invite exhibits of all kinds from all Colonies, British and Foreign, wheresoever situated, as well as from Islands under British rule in the South Pacific. They are also desirous of obtaining Works of Art, Educational, Scientific, and Machinery Exhibits from other countries; but ordinary Industrial Exhibits from Europe and America can only be admitted under special conditions. Inducements will be offered for the exhibition of processes of manufacture.

With the consent and support of the other chief cities of New Zealand, the Exhibition will be held in Dunedin, which is the centre of the railway system of the southern and most populous island of the Colony. A suitable site has been obtained in the heart of the town, close to the railway station and intercolonial wharves. A line of railway will deliver exhibits into the grounds.

The Exhibition will be open to the public on Tuesday, 26th November, 1889, and close about the middle of April, 1890. It will be open in the evening as well as the day time.

The Government will issue customs regulations for the free admission of Intercolonial and Foreign Exhibits, similar to those in force at Melbourne and other Intercolonial Exhibitions, and similar railway privileges will be allowed for exhibits. The reproduction of exhibits will be prohibited by law.

CONDITIONS AND REGULATIONS.

1. Governments intending to take part in this Exhibition are requested to intimate the same as soon as possible. Applications for space for exhibits from Colonies officially represented must be made through the Commissioners of the Colonies to which the applicant belongs. Applications from countries and colonies not officially represented should be addressed directly to the Secretary at Dunedin.
2. Applications for space, with full particulars, are invited as early as possible, and in the allotment of space precedence will be given, as far as possible to priority of application. No application will be received later than the 1st of July, 1889. Forms of application and all information can be obtained from the Secretary.
3. The ordinary charge for space will be £1 1s. for the first ten square feet or any less space, and a shilling for every additional square foot. Sculpture and paintings approved by the Fine Arts Committee will be admitted free, as well as educational and scientific exhibits shown by Government departments, and exhibits in Classes 34 and 35. Machinery and bulky exhibits will be shown in special annexes, in which space will be charged for at the reduced rate of £1 1s. for the first 20 feet, and sixpence for every additional foot. Wall space will be charged at the same rate as machinery. All applications must be accompanied by payment of the full amount of the space required. Special arrangements can be made for the exhibition of articles in the grounds.
4. The Exhibition will be ready for the reception of exhibits on October 1, 1889, and space not occupied by November 1, 1889, will revert to the Commissioners for re-assignment. The Executive Commissioner shall at any time have power to reserve or reduce space which, in his opinion, is not fully occupied or misused.
5. The Executive Commissioner may issue at his discretion weekly licenses for the sale of articles manufactured in the Exhibition, but no other exhibit will be allowed to be taken out of the buildings until the close of the Exhibition; and any exhibitor selling goods for immediate delivery renders himself liable to the forfeiture of his space and all rights as an exhibitor.
6. The Exhibition building will be constituted a bonded store, but exhibits sold will be subject to duty.
7. The introduction of dangerous substances is strictly prohibited.
8. Packages intended for the Exhibition must be painted or labelled with the following device as a distinctive mark:—N. Z. E., together with the name of the exhibitor and country or colony in which court the exhibit will be shown.
9. Customs entries, transportation, receiving, and arranging articles for exhibition must be undertaken by the exhibitor at his own expense, but no charge will be made for the carriage of goods intended for exhibition on the railway lines. New Zealand and Island exhibits will be carried free on the Union S. S. Company's boats, and Australian exhibits the double journey at single freight.

10. The protection of invention capable of being patented and of designs is secured by the patent law of New Zealand. No exhibit may be drawn, copied or reproduced in any manner whatsoever without the joint consent of the exhibitor and the Executive Commissioner. The Commissioners, however, reserve to themselves the right of authorising the production of general views.
11. If exhibits are not intended for competition, notice must be given in the application for space.
12. An official catalogue will be published in English by the Commissioners, by whom the sale of catalogues is reserved. Anything beyond the ordinary description of the exhibit, together with the name of the exhibitor, must be paid for as an advertisement.
13. The representatives of countries and colonies will be allowed to group their exhibits as they may think fit in that portion of the Exhibition buildings allotted to them, subject always to the approval of the Executive Commissioner.
14. Motive power will be supplied to exhibits of processes of manufacture free of charge on application to the Executive Commissioner; but the right is reserved of reducing the amount asked for, or to make a charge for certain portions of the motive power supplied at discretion. The Commissioners desire to encourage the display of machinery in motion, and of all descriptions of manufactures in progress. Requests for motive power must be made to the Secretary prior to 1st July 1889.
15. All shafting, pulleys, belting, machines, &c., for the transmission of power from the main shafting, must be provided by and at the cost of the exhibitor.
16. Judges will be appointed by the Commissioners, acting mainly upon the recommendation of the exhibitors themselves. Certificates of first, second, and third order of merit will be awarded.
17. The removal of exhibits from the Exhibition buildings and grounds must be completed within one mnoth from the close of the Exhibition. Goods remaining after that period will be removed by order of the Executive Commissioner, at the risk of exhibitors and sold by auction or otherwise disposed of at his direction, and the net proceeds handed to the exhibitors or their duly appointed agents.
18. Every person who becomes an exhibitor thereby acknowledges and undertakes to observe the rules and regulations established from time to time for the government of the Exhibition.
19. The Commissioners reserve the right to alter, explain, or add to these regulations at any time, whatever may be deemed necessary.
20. Precaution will be taken to preserve exhibits from injury and to guard the buildings, but no responsibility will be taken for damage or loss from whatever cause. Exhibitors will make their own arrangements for effecting insurances.

Form of applications for space and all further information can be obtained from

D. HARRIS HASTINGS, *Secretary.*

CLASSIFICATION OF EXHIBITS

CLASS 1.—Geological and Mineralogical Collections
2.—Mining and Metallurgical Machinery and Appliances.
3.—Chemical Manufactures.
4.—Glassware, Pottery, etc.
5.—Household Furniture, Brushware, etc.
6.—Heating and Lighting Apparatus.
7.—Textile Fabrics.
8.—Ready made Clothing, etc.
9.—Printing, Stationery, etc.
10.—Armament, Native Weapons, etc.
11.—Surgical and Pharmaceutical Appliances.
12.—Hardware
13.—Carriages, Horse furniture, etc.

P. GHOSHA,
Registrar of Companies under Act VI of 1882.

CALCUTTA,
The 14*th May* 1889.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government, during the week ending the 15th June 1889

Division	No.	District and date of return.	Rainfall as Sadder Station in inches.	Character of the weather and state and prospects of the crops.
		BENGAL.		
		Western Districts.		
Burdwan Divn.	1	Burdwan June 15, '89	2·56	Monsoon weather. Ploughings and sowings going on briskly. Prices of rice from 14½ seers per rupee at Raniganj to 16½ seers at Sudder.
		Culna ...	3·67	
		Cutwa ...	0·67	
		Raneegunge ...	0·16	
	2	Baukoora „ 15, '89	0·31	Weather—seasonable. Ploughing and sowing of land still going on. Sugarcane coming on well. More rain is wanted. Common rice 17¼ seers per rupee at Suddor and 18 seers at Bissenpore.
	3	Birbhum „ 15, '89	3·13	Weather—seasonable. Rice is now being sown everywhere in the district. Prospects so far excellent. Prices have a tendency to fall. Common rice at Rampore Hât is now 14 seers per rupee; at Soory 13½ seers, but with signs of falling.
		Rampur Hât ...	3·40	
	4	Midnapur „ 15, '89	2·68	The rainfall in the head-quarters sub-division has been amply sufficient for all purposes. In the other sub-divisions it has been less than an inch, and in Tumluk only ·20 is reported. Good progress has been made in the head-quarters sub-division with ploughing and sowing. In Tumluk these operations are rather retarded for want of rain. The other two sub-divisions will do for the present. The prospects of indigo have much improved. The price of rice has not been affected yet. Prices are— Rs. A. P. Sudder ... ... 2 9 3 Contai ... ... 2 10 0 Tumluk ... ... 3 0 0 Ghatal ... ... 2 8 0 } per maund.
	5	Hooghly „ 15, '89	1·46	Much rain has fallen; temperature decreased. *Aus* and *amun* sowings in progress. Rice is springing up, and affairs are assuming a normal appearance. Rice at Sudder and Serampore 12 seers per rupee, and at Jehanabad 16 seers.
		Serampore ..	0·21	
		Jehanabad .	4·59	
		Howrah „ 17, '89	3·07	Rains have broken: weather showery and steamy alternately. Prospects of crops good. *Amun* and *aus* being sown. Prices rising owing to want of rain, which has come at last.
		Central Districts.		
Presidency Divn.	6	24-Perghs. June 18, '89	2·13	Weather—rainy. There has been general rain during the week, and agricultural operations can now proceed briskly. The rice and jute, which have been sown, have come up well, and are looking very healthy. Prospects generally have much improved. Prices show some tendency to fall.
	7	Nuddea „ 15, '89	4 18	Weather—seasonable. Late rain has done much good to the crops. *Aus dhan* is germinating. Indigo, jute, and sugarcane looking well.
		Kooshtea ...	6·67	
		Meherpur ...	5·12	
		Chooadanga ...	4·45	
		Ranaghat ...	4·78	
	8	Khoolna „ 15, '89	2 26	Weather—hot and cloudy. The rainfall of this week has improved the prospects of the *aus* and *amun* crops. Seedlings are being grown for transplantation.
		Bagirhat .	3·76	
		Satkhira .	0 97	
	9	Jessore „ 15, '89	6 70	Weather—cloudy and rainy, but still hot. Heavy rain during the week has been beneficial to the standing crops. Prices stationary.
		Jhenidah ..	1·88	
		Magura .	4 76	
		Narail ...	2·43	
		Bongong ...	2 66	
	10	Moorshedabad „ 15, '89	2 64	Weather—hot and close with a little rain. Both *bhadoi* and *amun* are still being sown. Those that were sown before have come up and thriving.
		Lalbagh ...	1·68	
		Kandi ...	5·20	
		Jungipore	1 54	
Rajshahye Divn.	11	Dinagepur „ 15, '89	7·92	Weather—rainy. The late heavy rain has done much good, but there is some risk of the young rice seedlings now being choked with weeds unless there is a spell of fine weather. Extent of *bhadoi* rice sowings about ⅞ths of the normal area and of jute ⅞ths.
		Thakurgaon ...	11·51	
	12	Rajshahye „ 15, '89	5·44	Weather—close, with much less wind than in last week. The heavy rain has been beneficial to cultivation and growth of *til*, paddy, jute and rice. Sowings continue. *Boro* harvest still going on.
		Nattore ...	14 58	
		Nowgong ...	7 23	
	13	Rungpore „ 15, '89	5·01	Weather—sultry with frequent bursts of rain. All crops have greatly benefited by the heavy rainfall, and the prospects nearly everywhere are most favourable. The cutting of *aus* paddy has commenced, and *amun* paddy is being planted out. Jute and sugarcane are thriving.
		Gaibanda ...	9 94	
		Kurigram ...	7·90	
		Nilphamari ...	8·34	
	14	Bogra „ 15, '89	8 60	Weather—rains apparently set in. The crops have been improved by the rain, but it was untimely, and the prospects are not good. *Amun* rice is being sown, and *til* is being cut, in some places. Common rice selling at 15 seers a rupee.
		Sherpore ...	8·97	
		Nowkhilla ..	10·51	
	15	Pubna „ 15, '89	9·30	Weather—cloudy and wet. Owing to ample rainfall, *aus* and *amun* rice and jute and sugarcane are doing much better. Prospects in the Serajgunge sub-division are good and in the Sudder sub-division fair.
	16	Darjeeling „ 15, '89	7·94	Weather—rainy and foggy. Crops doing well both in hills and plains. Potatoes progressing favourably. Sowings of *bhadoi* and jute finished in Terai. About 6 annas of land for the *haimanti* have been cultivated. Recent rain has done much good
	17	Julpigoree „ 15, '89	7·61	Weather—cloudy in the early part of the week, but hot in the latter part. Prospects of crops fair. Jute injured by hailstones in some parts of the district. Lands are being prepared for *haimanti* rice. Common rice sells at 17 seers per rupee.
		Eastern Districts.		
Dacca Divn.	18	Dacca June 15, '89	5·95	Weather—cloudy and rainy. Jute and paddy crops are coming up well. Damage is anticipated to *amun* and *aus* paddy in low lands owing to too rapid rise of the rivers. No special change in the prices of food-grains. Fodder is available.
	19	Furreedpore „ 15, '89	6·13	Weather—seasonable. Prospects improved owing to recent rain. All crops doing well in the Goalundo sub-division, but in other parts of the district the low land rice will suffer from the rise of the rivers. Price of rice stationary.
	20	Backergunge „ 15, '89	3·38	Weather—seasonable. Prospects of crops good.
	21	Mymensingh „ 15, '89	11·67	Weather—cloudy and rainy. Jute, *aus* and *amun* crops are good. *Til* is being harvested.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*					
		Eastern Districts—concld.			
CHITTAGONG DIVN.	22	Chittagong	June 15, '89	6·61	Weather—cool on account of showers of rain. Prospect of *aus* better than last week. Prices continue high.
	23	Noakholly	„ 15, '89	9·92	Weather—rainy and cloudy. Sowing of *amun* continues. Rain has much improved the prospects of the standing crops. Price of rice has risen to 11 seers per rupee at Sudder and 12 seers at Fenny sub-division.
	24	Tipperah	„ 15, '89	3·24	Weather—seasonable. Rain nearly every day. The rain has done much good to rice and jute, which are thriving and growing vigorously. Chillies are being reaped.
	25	Chittagong Hill Tracts.	„ 14, 86	4·90	Weather—excessively hot and cloudy throughout the week. Heavy showers of rain from the 10th instant. Rain during the week has considerably improved the condition of *jum* paddy and cotton. The hill people expect about 10 annas outturn this year, if not injured by flood or damaged by rats.
		Hill Tipperah	„ 15, '89	3·94	Weather—unsettled; occasionally rainy. *Jum* crops doing well. Prospects of sugarcane and *aus* paddy fair.
BEHAR.					
PATNA DIVN.	26	Patna	June 15, '89	1·97	Weather—hot. Sowing of *bhadoi* and paddy is going on. *Cheena* and sugar cane doing well. Prices of food-grains stationary.
		Barh	...	0·31	
	27	Gya	„ 15, '89	2·18	Weather—sometimes cloudy, but hot. Lands are begun to be cultivated for *bhadoi* crops. *Makai* and *marwa* are being sown in some places.
	28	Shahabad	„ 15, '89	1·44	Weather—temperature much below normal during earlier part of the week, but getting very hot again. Clouds still hang about. The recent rain has done good to sugarcane, and will allow the ryots to prepare their lands for *bhadoi* crops. No other crop on the ground except garden produce. Prices stationary. Markets well supplied.
		Buxar	...	3·54	
		Sasseram	...	Nil	
		Bhabuah	...	0·50	
	29	Durbhunga	„ 15, '89	2·16	Weather—cloudy; slight showers fell in the north-west of the Madhubani sub-division, and heavier rain in other parts of the district. The rainfall of the week has facilitated the sowing of *bhadoi* except in places to the north-west of the Madhubani sub-division, where there have been light showers. More rain is wanted. *Mung* is being harvested, and the average outturn is estimated at three annas in Madhubani and eight annas in the rest of the district. Indigo is promising.
		Madhubani	...	0·72	
		Tajpur	...	1·64	
	30	Mozufferpur	„ 15, '89	0·88	Weather—cloudy; occasional storms; very little rain. Rice, *mung*, *makai*, and *marwa* are being sown. The rice previously sown in low lands is suffering for want of rain, which indeed is required everywhere.
		Hajipur	...	0·43	
		Sitamarhi	...	0·14	
	31	Sarun	„ 15, '89	0 82	Weather—hot and close. Rainfall very capriciously distributed. *Cheena* a good crop. Indigo fair. *Bhadoi* sowings continue.
	32	Chumparun	„ 15, '89	0·49	Weather—hot with passing clouds and variable winds during the week. To-day (15th) the monsoon appears to have set in. *Bhadoi* and *aghani* sowings progressing; the rainfall of to-day (15th) will facilitate them. Prices of rice and wheat have fallen slightly both at Motihari and Bettiah.
BHAGULPORE DIVN.	33	Monghyr	„ 15, '89	1·52	Weather—hot and mostly cloudy with occasional showers. The rain has done good, but more is wanted. Ploughing and sowing of *bhadoi* going on. Prices stationary.
		Beguserai	...	0·02	
		Jamooe	...	0·42	
	34	Bhagulpore	„ 15, '89	6·07	Weather—cooler with frequent storms. The rain has been unevenly distributed, but everywhere sufficient for *bhadoi* sowings, which are being pushed on. Seed beds for late rice are being prepared. Prospects more hopeful, but prices keep up.
		Banka	...	3·60	
		Madhepurah	...	7·10	
		Soopool	..	1·25	
	35	Purneah	„ 15, '89	3·61	Weather—seasonable. Rain almost every day now. Great good has been done to the crops by the late rain, and agricultural operations are much facilitated.
		Kissengunge	...	10·87	
		Arrareah	...	9·75	
	36	Maldah	„ 15, '89	2·23	Weather—hot and cloudy with occasional showers preceded at times by high winds. On the 12th there was a heavy and general downpour which lowered the temperature and thoroughly soaked the ground. The rain was general throughout the district. The present state of the jute crop is fair. The other standing crops are also doing well. Sowings of *bhadoi* and winter rice crops are pushed on. Coarse rice selling at 13 seers a rupee in the Sudder, but in the interior the price varies from 12 to 15 seers a rupee.
		Chanchal	...	1·11	
		Shibgunge	...	2·96	
		Gajole	...	1·39	
	37	Sonthal Perghs.	„ 15, '89	2·89	Weather—wet in the early part of the week, but cloudy and close in the latter part. Rain will enable the cultivators to sow both *dhan* and *makai*. All are busily at work. No change in prices, and no reports yet on the effect of the rain on the relief-works.
		Deoghur	...	1·35	
		Godda	...	12·32	
		Jamtara	...	1·17	
		Pakour	...	2 14	
		Rajmehal	...	3·29	
ORISSA.					
ORISSA DIVN.	38	Cuttack	June 15, '89	4·60	Weather—cloudy. Sowing of *sarad* and *beali* rice going on briskly. Copious rain fell this week to the great benefit of the rice crops. Price of rice stationary.
	39	Pooree ...	...	......	Report not received.
	40	Balasore	„ 15, '89	1·87	Weather—seasonable. Prospects good in Bhudruck. More rain still wanted in the north of the district. Sowings of rice general everywhere. Prices stationary.

	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
CHOTA NAGPORE.					
		South-West Frontier Agency.			
CHOTA NAGPORE DIVN.	41	Hazaribagh	June 15, '89	2·26	Weather—cloudy. Rain has fallen all over the district. Ploughing and sowing in full swing. Prospects of sugarcane improved by the rain.
	42	Lohardugga	" 15, '89	2 18	Weather—cool. Rain almost throughout the head-quarters sub-division. Sowing of early paddy is going on, and land is being prepared for low-land paddy. Both paddy and *goondli* are being sown in some places in the Palamow sub-division. Prices as before.
	43	Singbhoom	" 15, 89	3·15	Rain on three days of the week. It was sunny but cool in the intervals. Weather most favourable for agricultural operations Prices stationary.
	44	Manbhoom Govindpur	" 15, '89 . .	2·46 1 44	Weather—cool and cloudy with daily storms. The rains seem to have fairly set in. Ploughing is vigorously going on, and early sowings of paddy, *maize*, *goondli* and other crops are in progress. Paddy sowings so far are estimated at from 10 to 12 annas, and indigo sowings also at from 10 to 12 annas in Burrabhoom. Rice sells at from 14 to 20 seers per rupee.

Published for general information.

Explanation.—Summary. The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten ye[illegible]
The *humidity* of the atmosphere is expressed at percentage, saturated air being presented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The num[illegible] are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past [illegible] stations in the district sending in returns divided by the number of stations. A rainy days is one on which at least hundredth of an inch fell.

for the week ending Friday, the 14th of June 1889.

Average humidity at 8 A.M.	Average cloud amount at 8 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. RAINFALL. Of week. Mean for district.	Of week. Normal mean. The variations are *negative* when the mean for the week is less than the corresponding normal mean, and *positive* when greater.
denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head District observations of rainfall the normal means years. The means of the district are the numerical average of the rainfall return received in the district, *i.e.*, from total rainfall at the sub-divisional

Statement of Rainfall in Bengal for the week ending Friday (8 a.m.), the 14th of June 1889.

Meteorological division.	District.	Station.	Rainfall. Saturday, 8th June 1889.	Sunday, 9th June.	Monday, 10th June.	Tuesday, 11th June.	Wednesday, 12th June.	Thursday, 13th June.	Friday, 14th June.	Total. Number of rainy days.	Total. Rainfall of week.	Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 15th May 1889.	Average rainfall from 15th May to date.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 14th June* 1889.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS MADE IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS MADE IN ASSAM, FOR THE WEEK ENDING FRIDAY, THE 14TH JUNE 1889.

At the close of the previous week the meteorological conditions in the province were those which immediately precede the setting in of the monsoon rains. Heavy rainfall had been received for some time previous in Assam, and the rainfall-bearing current was gradually extending over East and North Bengal, and in both districts at the end of the week fairly general rain was being received. In the Bay the monsoon current had been blowing decidedly strongly for some time, and it was evident it had advanced well into the northern half of the Bay. On Saturday, the 8th of June, the wind velocities at the stations in the centre and south of the Bay commenced to increase, showing that the monsoon current was blowing more strongly, and at the same time wind directions began to shew a tendency to cyclonic circulation off the Orissa coast, where pressure was also falling moderately. On Sunday, the 9th of June, pressure had fallen slowly on the Orissa coast, while it was rising moderately elsewhere, and at the coast stations in the north-west of the Bay a distinct cyclonic circulation of winds obtained. It was clear, therefore, that a small cyclonic storm had formed in front of the advancing monsoon current at some little distance from the land, and the appropriate storm signals were therefore hoisted in the Hooghly and at the stations along the Orissa coast on the morning of the 9th. The storm, however, did not develop to any extent, but as it approached the land it apparently partially broke up or filled up and resolved itself into two or more smaller cyclonic whirls which existed in a general area of low pressure. This low-pressure area gradually drifted over the north-west angle of the Bay, and one of the small whirls passed between False Point and Saugor Island on the 10th; and though a second whirl still existed in the north-west angle of the Bay, and was probably between Saugor Island and False Point on the morning of the 11th, it was evident that the storms were of comparatively little importance, and the storm signals were lowered on the evening of the 10th. The second small whirl appears to have passed inland near Saugor Island on the 11th, and on the morning of the 12th it existed as a barometric depression in Central Bengal. The depression then advanced in a north-north-easterly direction, and on the 13th its centre was between Bogra and Mymensingh, while on the 14th it had advanced to the foot of the hills and had partially broken up and become more diffused; and on this day pressure was low along the whole of North Behar and over part of North Bengal. These small whirls were accompanied by the usual cyclonic circulation of winds, though the wind force as registered at the land stations was in all cases small, and they, as before stated, formed the front of the steadily advancing monsoon current. Owing to the cyclonic circulation in the north-west of the Bay, the monsoon current was first swept round the eastern quadrant of the small storm and advanced over the eastern half of the province, and general heavy rain commenced to fall in North Bengal from about the beginning of the week. In East Bengal heavy rain was received from about the 10th, and in South-West and Central Bengal and Orissa from the 11th; while in Behar and Chutia Nagpur rainfall commenced on the 11th and 12th, though it was not quite so general as in other districts. The monsoon rains may therefore be said to have broken over the whole of the province about the middle to the close of the week under review.

The small storms which formed in front of the advancing monsoon winds were, as they advanced over the land, very feeble, though they, as before stated, caused the commencement of the rains. At sea, however, the storm seems to have been of very much greater force, and bad weather prevailed over the northern half of the Bay for a considerable part of the week The observations supplied to the Meteorological Department by the Commander of the *Lalpoora*, which vessel was coming from Ceylon to Calcutta, appear to show that this steamer passed through the eastern quadrant of a cyclonic storm on the evening of the 9th off the South Orissa or Ganjam coast, and vessels also coming across the Bay seem to have experienced general bad weather. On approaching the land, however, the storm seems to have broken up to a considerable extent, and to have given rise to feeble whirls only.

Pressure.—The mean pressure for the week has been above the normal at all staions in the province except at False Point, where a slight defect is reported, which is probably due to the existence of the depressions above noticed In other cases in Bengal, pressure has generally varied from about 0·02 inch to 0·05 inch in excess of the normal. In Assam pressure is in excess by amounts varying from 0·04 inch to 0·06 inch.

Temperature.—Owing to the heavy rainfall which has generally been received during the week, the mean temperature has now become below the normal in all districts except Orissa. In Behar, North Bengal, and Chutia Nagpur, the defects are considerable, and vary from 2° to 4°. In East Bengal the defect equals about 1°, while in South-West Bengal it is less than half a degree. In Orissa, on the other hand, temperature has been in excess of the normal by 0·4°. In Assam the mean temperature has been nearly 3° below the normal.

Rainfall—Has been decidedly heavy during the week. East and North Bengal, have received average falls of between six and seven inches, or from two to three inches in excess of the normal fall for the period. Orissa, South-West Bengal, and Behar have received average

falls of between two and three inches, and these districts show in all cases falls very considerably in excess of the normal. The smallest average fall of a little less than two inches has been received in Chutia Nagpur, but even here the fall has been more than forty per cent. in excess of the normal fall.

In some of the districts in East and North Bengal the falls have been particularly heavy, and thus in Mymensingh an average district fall of no less than 11·2 inches is recorded, in Bogra one of 9·84 inches, and in Rajshahye one of 9·11 inches. On the other hand, in some districts very scanty falls have been received. In Mozufferpore a district fall of only 0·48 inch is recorded, in Chumparun one of 0 56 inch, in Sarun 0·61 inch, and in Patna 0·83 inch, and if the reports of the rainfall recording officers are to be trusted, at some stations even no rain at all has been received during the week. This is perhaps the case at Daudnagar and Shergati in the Gya district, and at Sheikpura in the Monghyr district. In other cases, such as at Kaliagunge, Paru, &c., no reports have yet been received of any rainfall at these stations during the week.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 14th of June 1889:—

Meteorological Divisions.	Temperature						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1889.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, t thunder, p passing temporary showers, ⌂ dew, < lightning, w strong wind.

A. PEDLER,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 17th June 1889.

MEMORANDUM.

THE number of deaths registered during the month of March 1889 in the districts of Bengal (excluding Kissenganj Municipality in Purneah, from which no return has yet been received) amounted to 114,210 among a population of 66,055,695, yielding a death-rate of 20·64 per 1,000, as opposed to 17·52 per 1,000 during the preceding month, and 21· per 1,000 during the corresponding month of 1888, showing, as compared with the former period, a large increase in mortality.

2. The undermentioned districts furnished the highest proportions of deaths :—

Districts.	Ratio per *mille.*	*Districts.*	Ratio per *mille.*
Purneah	62·16	Dinajpur	27·84
Backerganj	48 12	Julpaiguri	26·28
Noakhali	33 72	Rungpore	25·68
Murshedabad	30·84	Khulna	25·20
Darjiling	28 08	Tipperah	24·96

3. Of the diseases mentioned below, it will be seen that cholera prevailed with much greater severity in March 1889 than in the corresponding month of the preceding year; and that fever was considerably less fatal, *vide* figures given below :—

	Ratio per *mille* during— March 1889.	March 1888.
Cholera	3·36	1·80
Small-pox	·12	·12
Fever	13·20	14·64
Bowel-complaints	60	·72
Injury	·24	·12
Other causes	3·12	3·24

4. The following districts suffered conspicuously from cholera, fever and the maladies coming under the head of "Other causes," the other diseases noted in the above table not exhibiting any noticeable local severity :—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Purneah	40·20	Dinajpur	25·44	Poori	12·72

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,

The 17th June 1889.

W. H. GREGG, *Dip. Publ. Health, Camb.,*

Sanitary Commissioner for Bengal.

MEMORANDUM.

DURING the week ending 1st June 1889, the principal Municipalities in Bengal returned a birth and death-rate of 14·7 and 18·4 per 1,000 of population, respectively, against 16·6 and 20·9 per 1,000 in the preceding week ending 25th May, indicating a large retrogression in the registration of both births and deaths.

2. In the following Municipalities births and deaths were recorded at the highest rates:—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Darjiling	45·6	Puri	81·8
Ramporo Beauleah	42·0	Darjiling	58·7
Utterpara	37·7	Jessore	30·6
Puri	29·4		

3. The mortality from the specific diseases did not exhibit any noticeable differences in comparison with the death-rates from the same diseases during the preceding week:—

	Ratio per *mille* during the weeks ending— 1st June 1889.	25th May 1889.
Cholera	2·4	2·7
Small-pox	·4	·6
Fever	7·7	8 5
Bowel-complaints	2·0	2·7
Injury	·6	·8
Other causes	5·2	5·6

4. Small-pox, which appears to have prevailed noticeably in the Patna Town only, was attended with five deaths. Injury did not exhibit any local severity. Cholera, fever, bowel-complaints, and the maladies returned under the head of "Other causes" caused the highest mortality in the following Municipalities:—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Bowel-complaints.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Puri ...	48·2	Darjiling ...	39 1	Darjiling ...	19·6	Bhagulpore ...	16 3
Bali ...	14 0	Jessore ...	30·6	Puri ...	10·5	Puri ...	12 6
Howrah ...	2·3					Monghyr ...	9·9

5. In relation to *Sex, Class* and *Age* the mortality of the week was distributed as follows:—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	18·1	Christians	6·6	Under 1 year ...	158·7
Females	18·7	Hindus	19·3	1 and under 5 years ..	27·8
Ratio of male deaths to every 100 female deaths	104	Mahomedans ...	16·4	5 „ 10 „ ...	13 6
				10 „ 15 „ ...	6 4
				15 „ 20 „ ...	14 0
				20 „ 30 „ ...	10 3
				30 „ 40 „ ...	12·1
				40 „ 50 „ ...	14 4
				50 „ 60 „ ...	15 3
				60 years and upwards ...	36·1

W. H. GREGG, *Dip. Publ. Health, Camb.,*
Sanitary Commissioner for Bengal.

The 17th June 1889.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 1st June 1889.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be ...

Increases.

	Tons.
Cotton piece-goods ...	320
Due to ordinary traffic fluctuations.	
Metals ...	427
Includes tea garden machinery.	
Oilseeds ...	3,492
Due to a favourable market in Calcutta.	
Railway plant ...	5,074
For repairs and renewals.	
Salt ...	1,553
From Chitpore, Sealdah shows a decrease.	
Sugar ...	1,081
The increase is a general one on the eastern section.	

Decreases.

	Tons.
Coal ...	1,782
Due to sufficiency of stock for railway and flotilla purposes.	
Rice ...	3,195
Due to partial failure of the crops in Bengal.	
Betelnuts ...	508
Due principally to decreased despatches from the C. P. T. Railway upwards.	
Firewood ...	361
Decreased despatches from Canning.	
Tobacco ...	750
Decreased despatches from Sara and Domar.	

CALCUTTA, *the 13th June* 1889.

F. P. QUINLAN, *Examiner of Accounts.*

Weekly Return of Traffic Receipts on Indian Railways.

IRRIGATION OPERATIONS IN BENGAL FOR THE KHARIF SEASON 1888-89.

No. 956*I*.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

IRRIGATION.

Dated Calcutta, the 25th June 1889.

RESOLUTION.

READ—

Statements Nos. I, II, and III, showing irrigation operations for kharif 1888-89 of canals in Bengal.

OBSERVATIONS.—The area irrigated during the kharif season of 1888-89 was 476,776 acres against 425,503 acres in 1887-88, showing an increase of 12·0 per cent.

2. The increase was in the districts irrigated by the Orissa and Sone Canals, and was due chiefly to the failure of the rainfall towards the end of the season which brought canal water into acute demand. Of the five districts irrigated by the two canal systems named, Gya alone shows a slight decrease in the area returned as irrigated.

On the Midnapore Canal, however, where there was the same failure of the October rains and the same pressing demand for irrigation, a noticeable decrease of 10,334 acres has taken place in the area irrigated, and must be ascribed to the insufficiency of the supply obtained from the Cossye River, which is chiefly dependent on the local rainfall.

Notwithstanding the failure of the October rains, the registers show that the whole rainfall of the kharif season was greater for each district than in the season of 1887-88.

3. In Orissa and Midnapore the only kharif crop irrigated is rice, while on the Sone Canals, though the chief crop is rice, sugarcane and hot-weather crops also are irrigated.

4. In the statement following, a comparison by canals is made of the kharif areas irrigated during the seasons of 1887-88 and 1888-89 :—

The falling off on the Midnapore canal, the irrigation of which is almost entirely confined to the Midnapore district, has been explained above. On the Buxar canal, between which and the Arrah canal the irrigation of the Shahabad district is divided, there was a falling off of 7,620 acres in five-year leases, of which some 5,000 acres were kharif, and a further falling off of over 6,000 acres in annual kharif leases. The failure to obtain the renewal of leases was largely due to the prevailing hope that the recent agitation and the appointment of a Committee of enquiry would be followed by a reduction of rates, and probably took place chiefly in villages under "bhaoli" tenure, which pay rent in kind. In consequence, when the pressure came in October, many of these villages were neither prepared to receive the water, nor could it be given to them in time.

5. Under sugarcane there was an increase of 11 per cent., and under rice one of about 13 per cent., while under hot-weather crops there was a decrease of some 2,100 acres, or about 15 per cent.

ORDER.—Ordered that a copy of this Resolution and of the statements Nos. I, II, and III be submitted to the Government of India, in the Public Works Department, for information; also that copies be forwarded to the Commissioners of the Orissa, Burdwan, and Patna Divisions; the Collectors of Cuttack, Midnapore, Patna, Shahabad, Gya, and Sarun; the Superintending Engineers of the Orissa, South-Western, and Sone Circles; and the Examiner of Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

C. W. I. HARRISON, *Lieut.-Col.*, R.E.,

Offg. Joint-Secy. to the Govt. of Bengal.

CALCUTTA,
The 21st June 1889.

G. A. G. SHAWE,
Under-Secy. to the Govt. of Bengal.

ADMINISTRATION REPORT OF THE METEOROLOGICAL DEPARTMENT, 1888-89.

THE following report is published for general information.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

The 21*st June* 1889. *Secretary to the Government of Bengal.*

THE Bengal Meteorological Department has been under my control during the whole of the year under review, Mr. John Eliot, the permanent Meteorological Reporter to the Government of Bengal, having continued to officiate for Mr. H. F. Blanford as Meteorological Reporter to the Government of India.

The method of work in the Department has been changed rather materially during the year. These changes are entirely due to the general reorganisation of the whole of the Meteorological Department in India, which is being carried out by Mr. Eliot under the orders of the Government of India.

These changes, in so far as they concern the Bengal Meteorological Department, may be classed as follows:—

(i). The retention of 8 A.M. as the hour for the observations daily telegraphed by the coast stations round the Bay of Bengal for the Daily Weather Report of the Storm Signal Service.

(ii). The introduction from 1st January 1889 of the hour of 8 A.M. for the general time of observation at the inland stations in Bengal instead of the former hour of observation at 10 A.M. This change has included all those meteorological stations formerly classed as provincial observatories.

(iii). The retention of 10 and 16 hours' observations in addition to the 8 hours in the case of 15 stations. These observatories are those from which observations have been obtained for a series of years, and which are known to have submitted accurate and trustworthy returns, and which therefore give very reliable average results for comparison with the data of each succeeding year and which will thus enable a strict and scientific discussion to be carried out of each year's meteorology.

(iv). The classification of the observatories according to the various hours of observation, and the redistribution of allowances to the observers according to the number of sets of observations which have to be taken and the instruments observed.

(v). The introduction of arrangements for the collection of special meteorological observations during storms and the full recognition of the value of these observations by special payment for them; the amount to be paid being entirely dependent on the amount and quality of information submitted by the observers.

(vi). The amalgamation of the Bengal Meteorological office with the India Meteorological office.

All the changes marked ii to iv have been effected from 1st January 1889. Up to this date, therefore, the hour of observations at the majority of the imperial stations continued to be 10 and 16 hours, and in the case of the provincial stations 10 A.M. only.

In the case of the coast stations round the Bay of Bengal reporting daily observations for the Daily Report of the Storm Signal Service, 8 A.M. was adopted as an additional hour for observation, as a tentative measure, from 1st April 1888. A special allowance of Rs. 4 was granted to each of the

observatories thus recording the extra 8 hours' observations from 1st April to 31st December 1888, when these special allowances ceased.

This experimental change in the hour of observations from 10 A.M. to 8 A.M. was found during the nine months of its trial to answer admirably. The time of 8 A.M. for observations was indeed found to fulfil all the advantages it had been believed to possess, and which were set forth by Mr. Eliot in the proposal for its adoption. It enabled the reports printed daily at Simla by the Government of India to be issued practically a day earlier than when 10 A.M. had been adopted as the hour of observation. It has also enabled the changes going on over the land to be compared more rigorously with those over the sea as represented in the logs of ships. It has also enabled me to publish the Daily Bay of Bengal Weather Report between 10-30 and 11 A.M. instead of between 3 and 4 P.M. as heretofore, and thus it has fully answered my anticipations in the way of the possibility of issuing early warnings of the probability of stormy weather.

In view, therefore, of the manifest advantages of 8 A.M. as the hour of observation over the previous hour of 10 A.M., the Government of India finally settled that this was to be the hour of the observations for all the current work of the Department, such as for Daily Reports, &c.; while at a few of the oldest established and most satisfactory stations observations at 10 and 16 hours were continued for the purposes of strict comparison with the averages obtained in former years, for scientific discussion, and for the purposes of the Annual India Meteorological Report.

The change, as above stated, came into force on 1st January 1889, and from the point of view of the Bengal Meteorological Department, the new arrangement is a most satisfactory one.

Under the new system, therefore, the stations under the direct control of this Department noted below take observations at 8, 10, and 16 hours, and these observatories are in future to be considered second class:—

Dhubri.	Burdwan.	Durbhanga.
Sibsagar.	Chittagong	False Point.
Silchar.	Cuttack.	Hazaribagh.
Akyab.	Dacca.	Patna.
Berhampore.	Darjeeling.	Saugor Island.

The observatories mentioned below take only one set of observations at 8 A.M., and are considered as third-class observatories:—

Arrah.	Dinagepore.	Noakhally.
Balasore.	Furreedpore.	Nya Doomka.
Bankoora.	Gopalpore.*	Pooree.
Bhagulpore.	Gya.	Purneah.
Bogra.	Jessore.	Rampore Beauleah.
Burrisal.	Julpiguri.	Ranchee.
Buxar.	Krishnagar.	Raneegunge.
Chupra.	Maldah.	Rungpore.
Chybassa.	Midnapore.	Serajgunge.
Coconada.*	Motihari.	Tavoy.
Comilla.	Mymensing.	Tezpore.
Dehree.	Nellore.	

There are also two voluntary stations, Tura and Demagiri, taking only temperature and wind observations at 10 and 16 hours.

Of the second-class observatories, the following are provided with self-registering wind instruments:—

Dhubri,	Darjeeling,
Chittagong,	Hazaribagh,

Saugor Island;

while at the following, seismic or earthquake observations are recorded:—

Sibsagar.	Silchar.

* Under Port Officer.

The solar radiation thermometric observations, which were suspended from 1st January 1888, have been revived from 1st January 1889 in the case of the following second-class stations only under new and improved conditions:—

Dhubri.	Darjeeling.
Sibsagar.	Hazaribagh.

Saugor Island.

Separate instructions for the registration of the readings have been issued by the Meteorological Reporter to the Government of India. Three instruments, one of which has been in use for less than one year, another over two years, and the third over five years, are now being observed at each station. They are placed side by side, and in every way in similar conditions of exposure, and it is hoped that the combined observations of these instruments when compared in sets of three will enable any variations in the amount of solar radiation to be determined with accuracy.

In addition to the stations above shown under the headings of second and third class, which are directly under the control of this office, meteorological observations are received for the purposes of the Daily Weather Report for the Storm Signal Service, &c., of this office from the following observatories:—

Calcutta (Alipore) ...	Under control of the Meteorological Reporter, India.
Cuddalore ...	Madras Ports.
Madras ...	
Masulipatam ...	
Negapatam	
Vizagapatam ...	
Bassein ...	Burmah Ports.
Diamond Island ...	
Moulmein ...	
Rangoon ...	
Galle ..	Ceylon Ports.
Trincomallee ...	

Vizagapatam, which is mentioned in this list, is a voluntary observatory under the direction of Mr. A. V. Nursingrao, who has continued to favour the Department with his observations, which are of a high order of accuracy and which are received with great punctuality. The thanks of the Meteorological Department are therefore again due to Mr. Nursingrao for his continued valuable assistance in connection with the Storm Signal Service.

In addition to the above-mentioned stations from all of which regular meteorological observations, usually consisting of readings of air pressure, of temperature, wind direction and motion, cloud proportion, and rainfall, &c., are submitted, there are in all districts numerous stations which daily record rainfall only, and which send in their reports to this office. There are now no less than 255 of these rainfall-recording stations in the various districts in the Province of Bengal. Two stations were added during the year under review: these were, Sherepore town in Mymensing district and Nagrakatta in Julpiguri.

The number of observatories from which returns were therefore received in the Bengal Meteorological office during the past year has been—

1	First-class meteorological station.
15	Second " " stations.
35	Third " " "
2	Voluntary meteorological observatories
11	Additional meteorological stations for the Storm Signal Service.
255	Fourth-class or rainfall-recording stations.

There have thus been 12 more stations reporting in the past than in the previous year.

By orders of the Government of India the scale of monthly payment to the observers has been arranged in such a manner that they will be remunerated according to the total work of observation performed by them—

	Rs.
I.—To observers for taking 8 A.M. observations and despatching weather telegrams	10
II.—To observers for recording 10 and 16 hours' observations, as well as taking 8 hours' observations and sending daily weather telegrams	18
III.—To observers for taking only 10 and 16 hours' observations ...	12

	Rs.
IV.—Additional payment to observers at certain coast stations who send, as a part of their regular duty, storm telegrams for use in connection with the storm-warning work of the Department	5
V.—Additional payment to observers in charge of automatic wind instruments	4
VI.—Additional payment to observers who take special observations of solar radiation thermometers	3

In addition special grants will be made at the end of each year to those observers who have sent in valuable observations of storms which have passed over the observing stations.

The Department from the 1st of January of this year is therefore under an entirely different constitution both as to the nature of the work done and as to the payment received for such work by the observers.

The work of the Department may perhaps best be reviewed under the following heads:—

(*a*) Work connected with the publishing of Meteorological or Weather Reports, &c., generally and the working of the Storm Signal Service.

(*b*) Inspection of observatories and nature of work done, and any changes made at these observatories.

(*c*) Work of office staff.

Weather reports.

The regular reports which are issued by this Department are—

1st.—Monthly reports of the meteorology of Bengal and Assam which are also illustrated in a few cases with maps drawn by hand representing the actual rainfall, the variation from the normal, and the rainfall expressed as a percentage of the normal fall.

2nd.—Weekly reports of the meteorology of Bengal and Assam, and particularly of the rainfall of Bengal.

Both the monthly and weekly reports have been published regularly throughout the year in the *Calcutta Gazette*. The date of publishing of the monthly reports has been in almost every case that of the second Gazette after the close of the month in question, while each Gazette has dealt with the weather statistics of the week up to and including the Friday previous to its issue.

Two other general reports of the meteorology of Bengal are also prepared—the first is the meteorological summary for the whole year prepared in August for incorporation in the Bengal Administration Report. In the present year this was submitted in the month of September, and it was illustrated by maps showing the actual rainfall of the year, and its percentage variation from the normal. The second general report deals with the meteorology of the monsoon season only. This was prepared as usual, and it appeared in the *Calcutta Gazette* of 16th January 1889. A few copies of maps representing the actual monsoon rainfall, its variation from the normal, and the percentage of the actual rainfall as compared with that of normal years, were also prepared for submission with this report.

The Daily Bengal Report, which is published during the monsoon season, was issued regularly from the 28th of April to the 9th of November, or during a slightly longer period than usual. It dealt with the observations of the same number of stations as usual (*i.e.*, 41), and it was issued to 102 Government officers and to 13 private subscribers.

The Bay of Bengal Daily Weather Report of the Storm Signal Service was issued regularly throughout the year; and, as stated previously, owing to the change in the hour of daily observations from 10 A.M. to 8 A.M., and to the fact that at this earlier hour the telegraph wires are more free from traffic, so that the telegrams can be forwarded much more rapidly, it has been found possible to prepare and issue the report with its accompanying chart very much earlier than formerly. The usual time at which the report is printed and ready for distribution is between 10-30 and 11 A.M., instead of between 3 and 4 P.M. as was the case in former years. This report now contains the observations made at 8 A.M. at 25 stations in India and Burma and at 2 stations (Galle and Trincomallee) in Ceylon. In the latter case the observations are taken at 9-30 A.M., and they consequently cannot be included in the report for the same day, but appear in that of the day following. The report is prepared

and issued mainly to give information as to the state of the weather in the Bay of Bengal and over the surrounding coast areas, and to enable the Storm Signal Service to be worked effectively by the Reporter.

In the previous year the Storm Signal Service worked by this Department had been very largely modified, and the responsibilities of the Department largely increased by the duty of warning the Madras and Burmah Coast Ports being entrusted to it in addition to the duty of warning the Bengal Ports, and particularly Calcutta and its approaches. In the present year there has been no further important change in the system of working of the Storm Signal Service of the Bay of Bengal, except that the observatories at Nellore and Cuddalore have been started from 13th September 1888 and 1st March 1889 respectively. These observatories were under construction last year.

The Madras Government Astronomer, who had previously supplied this Department with the meteorological information from that station, having raised difficulties in the matter of sending in additional observations when called for in order to watch the progress of storms which were known to exist in the Bay of Bengal, and the course of which it was necessary to trace, the matter was reported to the Meteorological Reporter to the Government of India. A departmental observatory was in consequence opened at Madras under the Port Officer with the sanction of the Government of India, with effect from 7th January 1889. The observations recorded in the Bay of Bengal Daily Weather Report are now those taken at this departmental observatory, and the Government Astronomer in charge of the Madras observatory no longer supplies the daily meteorological telegrams to this office.

It should here be mentioned that the Diamond Island Telegraph Service has improved very materially since the widening of the belt of cleared forest through which the line passes, the sanction for which was reported in the last Administration Report. In the present year there has been almost no break in the regularity of the telegrams from this station, and thus one of the standing difficulties in the way of the successful working of the Signal Service in previous years has been removed.

There is, however, another difficulty in connection with the Telegraph Service which demands attention, and that is in the communication with False Point. At present there is only telephonic communication between False Point Light-house at which the meteorological observatory is situated and Hookeytolah on the mainland, and it frequently happens that on the occasion of bad weather or of a cyclone approaching the Orissa coast, the communication is suspended several hours before the storm approaches the land. This at once makes it difficult to determine the line of march and the position of a storm with any degree of certainty. Even also during such months as April and May, when strong southerly winds blow in the north-west angle of the Bay, it is found sometimes to be impossible to send in the daily meteorological telegrams with certainty and regularity, and thus in the first thirteen days in May 1889 on not a single day did the False Point telegram reach this office in time to be incorporated in the Daily Weather Report, and thus for all practical purposes of rapid or early forecasting these observations were useless.

The Orissa coast has been found from experience to be the focus where a large proportion of the storms of the south-west monsoon period forming in the Bay strike, and it would hence be extremely desirable in the interests of the Storm Signal Service that the telegraphic communication over that area should be as perfect as possible. If therefore False Point could be made a regular telegraph station instead of being connected by telephone only, and if a cable could be run connecting it with Hookeytolah, a distance of probably only about 5 or 6 miles, much greater certainty in the receipt of meteorological information from almost the most important observing station on the west coast of the Bay would be ensured, and much greater facility would be obtained in the matter of issuing timely warning to the Orissa ports and to the shipping that lies at anchor in or near the False Point Harbour. The cost of this extension to the Telegraph Department could not be very large, and it would partly be recouped by the income from the Meteorological Department, which alone will almost pay the salary of a signaller who would have to be posted at the Light-house.

In connection with the publication of this Report, and with the working of the Storm Signal Service generally, it may be mentioned that information as to the existence of storms near the Madras coast was issued on ten occasions in the calendar year 1888. On the Bengal and Orissa coasts, the signals were hoisted on eight occasions during storms, and information as to the existence of storms near the Burmah coast was given on five occasions.

No descriptions of the storms of the year will be given here, as these are fully described in the monthly, weekly, and daily reports above referred to, and their history is also summarized in the general report of the meteorology of the year, which will be published in the Bengal Administration Report.

The Bay of Bengal Daily Weather Report was issued during the year to 33 Government officials and to 23 subscribers.

In addition to the above reports, which are regularly published throughout the year, during the year under review a few special reports have been prepared. Two of these were prepared in order to be incorporated in the new edition of the Statistical Account of Bengal, the compilation of which was commenced during the year. It was proposed to give under each division a short account of the normal meteorological conditions peculiar to it, dealing specially with the conditions of rainfall, &c., and giving full statistical information of the principal meteorological elements. During the year reports of the following divisions have thus been submitted:—of the Burdwan Division on the 19th May 1888, and of the Bhagulpore Division on the 3rd September 1888.

A special report was also prepared on the meteorological features, &c., attending the Tornado at Dacca, which occurred on 7th April 1888. The paper was read before and published by the Asiatic Society of Bengal, and it consisted of two parts—the first or meteorological portion contributed by myself, and the second or the full description of the effects of the Tornado, which was contributed by Dr. Crombie, then Civil Surgeon of Dacca.

Inspection of observatories.

Of the 52 observatories under the direct control of this Department, only 18 could be inspected during the year Of the 18, one (Jessore) required to be inspected twice, so that nineteen visits of inspection in all were made as against thirty-four in the previous year. Of these, thirteen were made by myself and six by the Head Clerk of the office. One principal reason of the small number of observatories inspected during the year has been the fact that neither the Meteorological Reporter to the Government of India nor his Assistant has been able to be in Calcutta during the cold season to relieve the Bengal Reporter of his work, so as to enable him to get away on tours of inspection. This has arisen from the fact that the Assistant Meteorological Reporter to the Government of India has been on privilege leave, and hence the India Reporter has had to remain at Simla during the cold-weather months. In succeeding years this difficulty about inspection will be overcome, as an officer has been appointed as Inspector of Observatories for the whole of India, and thus the Bengal Reporter will be partially relieved of this work.

The following were the observatories inspected :—

By myself—

Gya.	Patna.	Chupra.
Dacca.	Bhagulpore.	Krishnagar.
Durbhanga.	Arrah.	Mymensing.
Jessore.	Buxar.	Raneegunge.
	Motihari.	

By my Head Clerk—

Jessore.	Dinagepore.	Rampore Beauleah.
Bogra.	Julpiguri.	Rungpore.

Of these, three belong to the second class, and the remainder to the third class.

Of the observatories inspected, the majority were in good order: the following, however, were exceptions:—

(1) Chupra observatory when inspected was in extremely bad order, and arrangements were made to transfer the observatory to the charge of the Telegraph Department.

(2) Bhagulpore observatory was also in bad order, and arrangements were subsequently made to transfer the post of observer to the Civil Surgeon's clerk.

(3) Rampore Beauleah was also in bad order, and the observatory was transferred to the charge of the Postmaster.

(4) Rungpore observatory was also in bad order, and the charge of the observatory was transferred to the Post and Telegraph Master.

Patna, Jessore, and Mymensing were in fair order only, but no change of observers was necessary.

Of the observatories which were not inspected, most of them submitted their returns regularly and punctually, and the observations were of such a character that they agreed very fairly well with neighbouring stations, so that, so far as can be judged, these observatories generally continue in good order. Only one exception to this fact is known, and that is in the case of Tezpore, where the observations have been utterly untrustworthy. The observer was fined on many occasions, and afterwards his pay suspended altogether for a time, but nothing appeared to have any effect on him, and during the current year the observatory has had to be entirely closed.

It having been found by the Public Works officials in charge of some of the observatories that the new hour of 8 A.M. was inconvenient to the observers, arrangements were made at the close of the official year to transfer the Arrah observatory to the charge of the Telegraph Master and the Motihari observatory to the charge of the Civil Surgeon's clerk.

In the case of Durbhanga and Bankoora also, which were formerly voluntary observatories, under the scheme of the reorganisation of the Department they were converted into regular observatories of the Department, and Durbhanga is now a second-class observatory, where the observer receives Rs. 10 per month, and Bankoora is a third-class observatory, where the observer's pay is Rs. 10.

Beyond the alterations alluded to in the opening portions of this report, no further changes have taken place in the class of work done at the various observatories.

Office staff.

Up till the 1st of January 1889 the constitution of the office and its staff remained practically the same as in former years, but from that date the Bengal Meteorological office has been amalgamated with the India Meteorological office, and the combined office is worked under the supervision of the Head Clerk of the India Meteorological office, Babu Fanindra Mohan Basu. The services of Babu Chandi Charan Chatterjee, the former Head Clerk of the Bengal office, have been well utilised, and he has been appointed as Inspector of Observatories for the whole of India.

Under the efficient supervision of Babu Chandi Charan Chatterjee, and since the 1st of January 1889 under the able management of Babu Fanindra Mohan Basu, the Bengal office establishment, consisting of two clerks, ten tabulators, and one draughtsman, has worked exceedingly well throughout the year, and the work of reduction and tabulation of observations has gone on so smoothly that the numerous reports published by this office have been issued completely and punctually on the dates on which they were due. The work done by the office indeed is extremely hard, and frequently involves late hours and even duty throughout the night, but in all cases the duty has been done willingly and cheerfully.

METEOROLOGICAL OFFICE,
Calcutta, the 25th May 1889.

ALEX. PEDLER, F.C.S.,
Offg. Meteorological Reporter to the Government of Bengal.

DISTRESS IN THE TRIBUTARY MEHALS OF ORISSA.

REVENUE DEPARTMENT.

No. 81T—R, dated Darjeeling, the 14th June 1889.

From—P. NOLAN, Esq., C.S., Secretary to the Government of Bengal, Revenue Dept.,
To—The Commissioner of the Orissa Division.

WITH reference to your letter No. 809, dated the 5th June 1889, I am directed to convey the Lieutenant-Governor's sanction to a grant of Rs. 10,000 (rupees ten thousand) for expenditure on relief purposes in Angul, to be distributed as follows:—

	Rs.
For relief works	3,000
„ gratuitous relief	2,000
„ tuccavi advances	5,000

This sanction has already been communicated to you by my telegram of yesterday's date.

2. His Honour also approves your action in ordering Rs. 1,000 worth of food-grains to be sent to Angul, and authorizing the tehsildar to commence works out of the 10 per cent. grant, and to administer gratuitous relief under the provisions of the Famine Code.

3. I am to request you to furnish further information as to the prospects in Angul. Government is not fully informed as to the crops ordinarily grown in that killa, their seasons, the proportion of each lost last year, and the date at which the reaping of the next crop may be expected to afford relief.

No. 809, dated Camp Pooree, the 5th June 1889.

From—J. A. HOPKINS, Esq., Officiating Superintendent, Tributary Mehals,
To—The Chief Secretary to the Government of Bengal.

IN continuation of this office report No. 129—780T of the 27th ultimo, regarding the condition of the people in the Tributary Mehals of Orissa, I have the honour to submit the following for the orders of Government.

2. As stated in paragraph 30 of the report quoted above, the last autumn crop in Angul was poor, and the cold-weather crops were more or less a failure. In January last, when the Assistant Superintendent visited the State he did not observe any sign of immediate distress amongst the people, but he found that the day labourers, who are chiefly employed in agricultural operations on a system of annual contracts, had, before the expiration of the term of the contract, been in a body thrown out of employ on the ground of want of means on the part of their employers to keep them on, and he apprehended that later on it would be necessary to open relief works, to make tuccavi advances, and to remit or defer the collection of a part of the rent of the estate. The Assistant Superintendent's estimate was partly dependent upon the *mohul* and mango crops which were then in flower, but the latter proved a failure.

3. Matters have hitherto gone on fairly well, notwithstanding the failure of the crops; food-grains have been available, being imported from the neighbouring States, and so long the people have been able to help themselves, but the import of grain is gradually failing, and it is now, I regret to say, there is no doubt that relief operations must be commenced. The tehsildar reports that want of food is felt by the landless classes and the lower classes of cultivators in every village, specially by those living near the head-quarters in the parganas of Purnagur and Taras and a part of Khoma Kalinga, where there was total failure of crop last year.

4. The permission given to the people to collect edible roots, leaves, &c., from the jungles has been of great service to them; but the rains having held off for an unusually long period, the ground has become dry and arid, so that roots have not developed; leaves, fruits, and flowers are scarce; the supply has been almost used up.

5. The tehsildar in charge of the State, who is an officer of local experience, reports that it will be necessary to afford gratuitous relief, and to open relief works, besides constructing the ordinary works from the 10 per cent grant. He thinks that about 3,000 persons would immediately require relief, of whom less than half the number would be fit for work, while the rest, consisting for the most part of children, would require gratuitous relief.

6. In view of the prospective increase of revenue in the course of the settlement now in progress, the amount available for the improvement of the estate out of the annual 10 per cent. grant was estimated at Rs. 3,880; but in consequence of the failure of the crops more rent will, I fear, have to be remitted, and its collection will be delayed; so that after providing for the annual recurring charges no more than Rs. 1,000 will, it is feared, be available for new works in which persons in need of relief might be employed.

7. The tehsildar asks for a relief grant of Rs. 3,000 for works and Rs. 2,000 for gratuitous relief and Rs. 5,000 for tuccavi advances.

8. It is at present difficult to state to what extent relief measures would have to be carried on. Very much will depend upon the state of the weather. If there are seasonable showers of rain much of the present anxiety will disappear, day-labourers will be employed in agricultural operations, the supply of edible jungle produce will be abundant, and there would not be any great need for State relief; but if the rains hold off much longer, the state of things will probably become very serious.

9. Under these circumstances, I request that I may be authorized to advance funds to the extent noted below:—

	Rs.
For relief works	3,000
" gratuitous relief	2,000
" tuccavi advances	5,000

I consider this sum will be required. I can assure the Government that great care will be taken in administering relief; gratuitous relief will not be given to any except those who actually need it, and are under the Famine Relief Code entitled to it; the relief operations will not be continued a day longer than they are needed.

10. I have ordered Rs. 1,000 worth of food-grains to be sent to Angul. Further supplies will be made, if necessary.

11. Enquiries as to the extent to which rent will have to be remitted are being made, and a separate report on the subject will be submitted in due course. I have authorized the tehsildar to commence at once works out of the 10 per cent. grant, and to administer gratuitous relief in extreme cases to those only who under the Famine Code are entitled to it. I trust this will meet with the approval of Government.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 22nd June 1889.

Division	No.	District and date of return.	Rainfall as Sadder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
BURDWAN DIVN.	1	Burdwan June 22, '89 Culna ... Cutwa ... Raneegunge ..	3·15 3·06 0·94 5·01	Weather—seasonable. There has been a break in the rains since two days. Cultivation of *aus* paddy going on Standing crops doing fairly well. Price of common rice 16¼ seers per rupee at Burdwan, 14 seers at Culna, 15$\frac{5}{16}$ seers at Cutwa and 14½ seers at Raneegunge.
	2	Bankoora „ 22, '89 Bishenpore ...	7·50 4·22	Weather—seasonable. Ploughing and sowing of rice proceeding. Seedlings coming up well. Cotton is reported to be gathered in Bishenpore with an 8-anna outturn. Common rice selling at 18 seers per rupee at Sudder as well as at Bishenpore.
	3	Birbhum „ 22, '89 Rampur Hât ...	3·26 1·80	Weather—seasonable. All prospects are at present very good. Price of rice as in last week, viz., 14 seers per rupee at Rampore Hât and 13½ seers at Sooree.
	4	Midnapur „ 22, '89	1·50	Good rain throughout the district. There now seems likely to be a break. The rain is stated to have been sufficient for the seedlings and for ploughing. The price of rice has not been materially affected. Prices are— Rs. A. P. Sudder ... 2 9 3 per maund. Contai ... 2 10 0 per maund. Tamluk ... 3 0 0 per maund. Ghatal ... 2 10 0 per maund.
	5	Hooghly „ 22, '89 Serampore .. Jehanabad . Howrah „ 24, '89	1·85 5·91 4·35 6·46	Light and continued rain. Favourable reports are now received as to all crops. *Aus* sowings are backward, but are being pushed on. Price of coarse rice at Sudder and Serampore 12 seers per rupee and at Jehanabad 16 seers. Weather—good rain; bright at intervals. Rain has improved prospects. At Sudder common rice 12 seers per rupee, and cheapest rice 14 seers; at Ulubariya, cheapest rice 13 seers per rupee.
		Central Districts.		
PRESIDENCY DIVN.	6	24-Perghs. June 25, '89	4·95	Weather—hot with abundant rainfall. Jute and rice crops coming up well. Ploughing and sowing proceeding briskly. Prospects excellent.
	7	Nuddea „ 22, '89 Kooshtea ... Meherpur ... Chooadanga ... Ranaghat ...	2·75 3·15 0·82 6·95 4·22	Weather—seasonable. Early rice, indigo and sugarcane looking well. Now that the rain has ceased for a few days, weeding and other field operations are going on.
	8	Khoolna „ 22, '89 Bagirhat . Satkhira .	4·48 5·96 5·57	Weather—seasonable. Prospects very much improved. Land is being prepared. *Aus* sowings going on. Sugarcane is being planted in the Satkhira sub-division.
	9	Jessore „ 22, '89 Jhenidah ... Magura . Narail ... Bongong ...	2·80 2·53 3·04 6·50 3·36	Weather—hot and cloudy with occasional rain. The rainfall of the week, will be beneficial to the standing crops if it is followed by bright sunshine. *Aus* and *amun* sowings are in progress. Price of rice stationary.
	10	Moorshedabad „ 22, '89 Lalbagh ... Kandi ...	0·48 0·46 2·32	Cool fine weather with passing clouds and showers. *Aus dhan* is thriving; *amun dhan* is being sown. Prospects good.
RAJSHAHYE DIVN.	11	Dinagepur „ 22, '89 Thakurgaon ...	6·38 1·38	Weather—close and hot with frequent heavy rain. Prospects of the *bhadoi* crop are fair. More sunshine is wanted now.
	12	Rajshahye „ 22, '89 Nattore ... Nowgong ...	2·35 1·50 1·73	Weather—still close and hot and sometimes cloudy. Sowing of *aus* is almost complete. *Amun* and jute sowings still going on. Rice sells now at 13½ seers per rupee.
	13	Rungpore „ 22, '89 Gaibanda ... Kurigram ... Nilphamari ...	4·28 6·14 1·83 2·95	Weather—unsettled; heavy showers with intervals of sunshine. The *aus* harvest has begun. The planting out of *amun* continues under very favourable weather; jute promises well. Prices show an improved tendency.
	14	Bogra „ 22, '89 Sherpore ... Nowkhilla ...	1·59 1·59 1·64	Weather—cloudy and showery. Preparation for late rice going on apace. Some injury has been done to the *aus* crop in the east of the district by the rapid rise of the rivers. Other crops are growing, but will not be good owing to long drought in the spring. Coarse rice is selling at 15 seers per rupee.
	15	Pubna „ 22, '89	0·78	Weather—close; occasional showers. Prospects of crops in the Serajgunge sub-division are good, and in the Sudder sub-division fair. Area sown with *aus* and *amun* is somewhat below the average.
	16	Darjeeling „ 22, '89	6·07	Weather—misty in the early part of the week. Rain has fallen all over the district. Crops generally doing well. Indian-corn and *bara marwa* thriving. Potatoes progressing favourably. About 8 annas of land cultivated for *haimanti* in Terai. Prospects of jute and *bhadoi* fair.
	17	Julpigoree „ 22, '89	1·80	Weather—cloudy and very close. Sowing of *haimanti* paddy going on. *Bitri* paddy is being cut. Prospects of crops generally good. More rain wanted. Common rice sells at 16 seers per rupee at the Sudder station.
		Eastern Districts.		
DACCA DIVN.	18	Dacca June 22, '89	3·61	Weather—cloudy and rainy. Jute and paddy crops are doing well where sown early. Prospects fair. Fodder is available. No special change in the prices of food-grains.
	19	Furreedpore „ 22, '89	1·19	Weather—seasonable. Harvesting of *joli* paddy nearly finished. Prospect of the crop fair. Paddy sown in low lands partially damaged by the rise of the river. Price of rice stationary.
	20	Backergunge „ 22, '89	6·37	Weather—seasonable. Prospects of crops good.
	21	Mymensingh „ 22, '89	1·37	Weather—hot with occasional rain. Prospects of crops good

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL—*concluded.*				
		Eastern Districts—concld.		
CHITTAGONG DIVN.	22	Chittagong ...	......	Report not received.
	23	Noakholly „ 22, '89	4·47	Weather—seasonable. *Aus* plants thriving well. Some damage is expected in the low lands at Hatia island, where the *aus* plants are reported to be submerged under tidal water. Lands are being prepared for seedlings of *amun* crop.
	24	Tipperah „ 22, '89	3·10	Weather—cool with rain every day. Jute and paddy doing very well. Prospect of crops generally good.
	25	Chittagong Hill Tracts. „ 21, '89	4·53	Weather—cloudy and rainy throughout the week with occasional sunshine. Cotton and *jum* paddy thriving well. Plough cultivators have commenced ploughing. Rain during last two weeks has considerably improved the condition of the *jum* crops.
		Hill Tipperah „ 22, '89	1·22	Weather—hot and occasionally drizzling. Prospects of *jum* crops good. *Aus* paddy doing well. Price of rice rising—now 12 seers a rupee.
BEHAR.				
PATNA DIVN.	26	Patna June 22, '89 Barh ... Behar ... Dinapur ...	0·56 2·12 1·33 0·88	Weather—hot and cloudy. Sowing of *bhadoi* going on. *Cheena* flourishing. Prices of food-grains almost stationary.
	27	Gya „ 22, '89	2·16	Weather—hot and cloudy. Fields are being ploughed for sowing. *Makai* and *marwa* are being sown.
	28	Shahabad „ 22, '89 Buxar ... Sasseram ... Bhabuah ...	1·36 2·21 2·03 0·80	Weather—very muggy and cloudy. More rain wanted in the Bhabuah and Sudder sub-divisions. Land is being ploughed and sown with *bhadoi* crops Sugarcane doing well. Prices almost stationary, but rising at Bhabuah.
	29	Durbhunga „ 22, '89 Madhubani ... Tajpur ...	0·84 3·43 1·14	Weather—cloudy and occasionally sultry. Sufficient rain has fallen for agricultural purposes *Bhadoi* sowings are being pushed on. Indigo manufacture is about to commence. Common rice is selling at 12½ seers per rupee.
	30	Mozufferpur „ 22, '89 Hajipur ... Sitamarhi ...	1·62 1·52 4·33	Ordinary monsoon weather; cloudy, hot, and muggy. Good rain reported from all police-stations and outposts. *Bhadoi* crops in the south looking well. *Bhadoi* and rice are being sown everywhere where it had not been already sown. *Marwa* is being transplanted.
	31	Sarun „ 22, '89	1·40	Ordinary monsoon weather. Rainfall capricious, but generally sufficient. *Bhadoi* sowings completed. More rain wanted for indigo. Mahai will this year be late.
	32	Chumparun „ 22, '89 Bettiah	5·69 3·18	Weather—seasonable. Sowings of *bhadoi* and *aghani* in progress. Heavy showers during the week have done great good. Prices have fallen slightly.
BHAGULPORE DIVN.	33	Monghyr „ 22, '89 Beguserai ... Jumui ...	1·47 0·88 0·61	Weather—hot and sultry with occasional showers. Sowing of *bhadoi* going on. About 12 annas of the usual area on the whole has been sown. More rain wanted. Prices high and stationary.
	34	Bhagulpore „ 22, '89 Banka ... Madhepurah Soopool	0·82 0·68 1·30 3·83	Weather—seasonable and favourable to the young *bhadoi* crop. Sowings still in progress. Transplanting of early rice and *marwa* has begun in the north. Cessation of rain for a few days would do good. Prices remain high.
	35	Purneah „ 22, '89 Kissengunge ... Arrareah ...	3·79 3·19 4·88	Weather—hot and seasonable. Crops greatly benefited by rain, of which there seems to have been more than enough in Arrareah. Prospects good. Indigo, it is feared, will give a bad outturn owing to drought in the first place and then to excessive wet.
	36	Maldah „ 22, '89 Chanchal ... Shibgunge .. Gajole ...	2·33 1·01 1·62 1·67	The rains have fairly set in. More or less rain throughout the week. Weather sea-onable. *Bhadoi* sowings not yet complete. Sowings of winter rice and *makai* going on. Common rice selling at an average of 13 seers a rupee.
	37	Sonthal Perghs. „ 22, '89 Deoghur ... Godda ... Jamtara . Pakour ... Rajmehal ...	1·94 1·67 0·89 4·00 1·06 3·40	Weather—seasonable. Agricultural operations are progressing satisfactorily. Prices are, however, very high, and show no tendency towards falling. Test relief-works are still going on.
ORISSA.				
ORISSA DIVN.	38	Cuttack June 22, '89	2·83	Weather—cloudy and hot. *Beali* sowing in the Sudder sub-division extended up to 15 annas, in Jajipur 14 annas, and in Kendrapara 10 annas. *Laghu* and *guru sarad* rice sown in the Sudder sub-division up to 12 annas, in Jajipur 14 annas, and in Kendrapara 10 annas. Agricultural stock in the hands of the cultivators reduced. Coarse common rice sells at 13 Calcutta seers per rupee.
	39	Pooree „ 21, '89 Khoorda	2·75 1·34	Weather—seasonable. Ploughing and sowing of *sarad* crop extensively going on. *Beali* or early rice doing well Price of common rice varies from 18 seers 7 chittacks to 11 seers 13 chittacks in the Sudder sub-division, and from 15 seers 1 chittack to 11 seers 13 chittacks in the Khoorda sub-division.
	40	Balasore . „ 22, '89	0·51	Weather— seasonable. Prospects generally good except in portions of the north of the district.

	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
CHOTA NAGPORE.				
		South-West Frontier Agency.		
CHOTA NAGPORE DIVN.	41	Hazaribagh June 22, '89	1·33	Weather—seasonable. Sufficient rain all over the district Lands are being ploughed and prepared for *bhadoi* crops. *Goondli*, *marwa* and paddy are being sown. Sugarcane doing well. Prices stationary.
	42	Lohardugga „ 22, '89 Palamow ...	4·48 1·09	Weather—cool and cloudy. Rain almost throughout the whole district Rain in the sub-division has benefited agricultural operations *Gundli*, *makai* and paddy are being sown. Prices rising in the sub-division.
	43	Singbhoom „ 22, 89	8·25	Plentiful rain during the week. Weather most favourable for agricultural operations Prices stationary.
	44	Manbhoom „ 22, '89 Govindpur	3·64 3 12	Weather—cool and cloudy. All autumn and winter crops are being sown more than 14 annas of sowings finished. Prices stationary.

Published for general information.

The total fall from 1st January to 22nd June 1889	15·52
The average fall of the corresponding period for 24 years, S.-G.'s Office ...	18·37

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor General's Office.

The hygrometric elements are obtained from Table[illegible] the official tables computed in the Meteorological Office, and based on Regnault's mod[illegible]

The directions and the movement of the wind are [illegible]y's anemograph.

The mouth of the rain-gauge is one foot above th[illegible]

[illegible] g gloomy, t thunder, d drizzling, [illegible] < lightning, [illegible] dew.
